1 Explanatory Notes

1.1 Release Notes v4

Demscore provides worldwide free access to harmonized data on Democracy, Environment, Migration, Social Policy, Conflict and Representation from several of the world's most prominent social science research institutes. The interdisciplinary nature of Demscore data facilitates large-scale comparative analyses. This is essential to advance adequate policy responses to complex societal challenges associated with the Sustainable Development Goals (SDGs) and beyond, facing Sweden, Europe, and the world today.

With a firm commitment to transparency and openness, Demscore v4 enables users to gain comprehensive insights into various topics across the social sciences. The joint infrastructure ensures data integrity and quality at the highest international standards and maximizes usability in the measurement of contextual data with 25.000 variables across nearly all countries in the world, from 1750 to the present.

This creates critical time- and cost saving advantages in data collection, management, distribution, and not the least for end-users in the scientific community. Demscore's unique approach to translating and merging data scales up to a total of 403.856 variable versions available in the infrastructure, storing more than 10 billion non-missing observations.

This collaborative effort between leading Swedish universities pushes the scale of social science data to a new level and offers unprecedented possibilities for interdisciplinary research and knowledge advancement.

These are the key features of Demscore:

1. **Customized Download:** A fully normalized, joint PostgreSQL database, sophisticated programming, and a user-friendly web-based interface for users to generate custom-designed datasets and codebooks for download.
2. **Translations and Data Merges:** Demscore currently offers more than 1000 merge options between datasets.
3. **Metadata:** Demscore takes information on and organization of metadata to new heights with the inclusion of customized codebooks, a detailed methodology document, and a comprehensive handbook.
4. **Handling of Missing Data:** Demscore pioneers in developing an innovative approach to tackle missing data. Researchers can now account for missing values with increased precision, leading to more robust and reliable analyses.
5. **Merge Scores:** Demscore introduces a unique merge mechanism. This powerful tool enables researchers to combine datasets effortlessly, uncovering connections and patterns that were previously hidden in isolated data silos.
6. **Thematic Datasets:** Demscore provides researchers with curated thematic datasets, each focused on a specific topic. These datasets bring together relevant variables from across the Demscore partners, facilitating in-depth investigations and comprehensive analyses of specific domains.
7. **Interactive Web Portal:** In addition to all the above, Demscore's web portal offers interactive visualization tools, user support and additional information on all partners and data sources.

For more information, please visit <https://www.demscore.se/> or contact contact@demscore.se.

1.2 New in Demscore version 4

A detailed description of changes and additions made for version 4 compared to version 3 can be found in the Methodology Document.

1.3 The Demscore Codebook

The autogenerated Demscore Codebook lists variable entries for those variables chosen by the user along with citation guidelines and licenses per variable.

The meta data is extracted from the codebooks per dataset stored in a table in the Demscore PostgreSQL database with one row per variable for all datasets. This table includes codebook entries, variable tags, labels, and other variable information in LaTeX format used to generate an automated codebook.

Demscore maintains a single set of standard entries for metadata across all datasets, to which all project members contribute their information. Additionally, variables within different datasets may have varying sets of additional information requirements specific to each dataset. These dataset-specific entries are also included, but they are presented as variable-specific metadata beneath the standard entries.

At the outset of the harmonization process, Demscore underwent a thorough variable name cleanup. This involved tasks such as replacing spaces or dots in variable names with underscores and converting all letters to lowercase. Notably, the original tags remain preserved and stored in the PostgreSQL table. Each variable in Demscore is accessible in both short and long forms. The short form comprises the cleaned version of the original variable tag, while the long form starts with the dataset name from which it originates, followed by the cleaned variable name.

For instance, the original name of the variable *MinisterPersonalID* from the H-DATA Foreign Minister Dataset is included as *ministerpersonalid* (short form) and *hdata_fomin_ministerpersonalid* (long form) in Demscore.

In addition, each dataset includes Demscore unit-identifier variables which are named according to the following naming scheme: Beginning with *u_*, followed by the name of the primary unit and finally the variable tag. The *year-* variable from the COMPLAB SPIN The Out-of-Work Benefits Dataset (OUTWB), which is part of the primary unit *u_complab_country_year* has the Demscore unit identifier name *u_complab_country_year_year*.

1.4 Methodology

For details on our methodology please see the Demscore Methodology document available for download on the Demscore website.

1.5 Citations

The Demscore project does not have a formal citation of its own. Hence, when using Demscore, we suggest that you cite the respective projects and datasets. We indicate how every dataset is to be cited in the autogenerated codebook you retrieve with your data download, both in the dataset description and the codebook entry for each variable. Most often it is sufficient to cite the dataset a variable originates from, but sometimes there is a variable specific citation listed in the codebook entry in addition to that. For these cases, please also add the variable specific citation to the reference list of your publication. Full references are linked in the codebook entries of the variables and listed in the codebook's bibliography. We suggest you to also cite the Demscore Methodology Document when using data retrieved through Demscore.

1.6 Missing Data

Demscore indicates different types of missingness for observations in the customized datasets:
Missing in original data = Whenever an observation in the original variable is a missing (NA, missing code such as 7777, blank cell), we preserve this missing value. When the original source has special codes for various types of missing, those are preserved.

Missing code: -11111 = Demscore code for observation is missing due to the translation/merge, i.e., missing data due to no data being included for this combination of identifiers in the end Output Unit.

Missing code: -22222 = No observation is merged/translated, but the original data contains information for these identifier combinations elsewhere. For these cases, we use a different code. The

user needs to consult the reference documents (Methodology Document Section 5.1. or the Demscore Handbook) to clarify why the translation to the identifier combinations in the end Output Unit was not possible.

Please note that an observation that is missing in its original output unit does not take the value -11111, but appears as NA/blank cell in the customized dataset.

1.7 Download ID

The download ID can be shared with other users for replication purposes. A user can type the download ID into the Demscore website and retrieve the same download selection and files as the original user. This ID is autogenerated for each download from the Demscore website and will always retrieve the same data, even if the Demscore version was updated in the meantime.

Download ID:

1.8 Unit Identifier Variables

An Output Unit is defined as an output format in which variables can be retrieved from one or more datasets through a strictly defined output grid. A unit table defining this output grid contains unit identifier columns with `u_` prefixes and the table is sorted based on these unit identifier columns and has a fixed number of rows. Unit columns are based on the columns that constitute the unit of analysis in a dataset. They are added to the original dataset and marked by a unit prefix (consisting of a `u_` and the dataset unit name) before the original variable name. Unit columns can contain slightly modified data, e.g., missing values are replaced by a default value. Sometimes we add additional columns to the unit table, for instance if a dataset includes both a `country_id` column with a numeric country code, we add the variable storing the full country name to the unit table as well for better readability.

2 QOG

The **Quality of Government (QoG)** Institute was founded in 2004 by Professor Bo Rothstein and Professor Sören Holmberg. It is an independent research institute within the Department of Political Science at the University of Gothenburg. QoG is comprised of about 30 researchers who conduct and promote research on the causes, consequences and nature of Good Governance and the Quality of Government (QoG) - that is, trustworthy, reliable, impartial, uncorrupted and competent government institutions. QoG's award-winning datasets focus on concepts related to quality of government, transparency, and public administration. The main objective of QoG's research is to address the theoretical and empirical problem of how political institutions of high quality can be created and maintained. A second objective is to study the effects of Quality of Government on a number of policy areas, such as health, the environment, social policy, and poverty. The QoG datasets draw on a number of freely available datasources. More information on how the variables are compiled for different QoG datasets can be found in the respective QoG codebooks available on their website. More information is available on the project's website: <https://www.gu.se/en/quality-government>

2.1 QoG Environmental Indicators Dataset

Dataset tag: qog_ei

Output Unit: QoG Country-Year, i.e., data is collected per country and year. That means there is one row for each combination of country and year in the dataset. This unit is identified using the cname column and the year column.

Description: The Quality of Government Environmental Indicators Dataset (QoG-EI) is a compilation of major freely available indicators measuring environmental performance of countries over time.

Dataset citation: Povitkina, Marina, Natalia Alvarado Pachon Cem Mert Dalli. 2021. The Quality of Government Environmental Indicators Dataset, version Sep21. University of Gothenburg: The Quality of Government Institute, <https://www.gu.se/en/quality-government>

Link to original codebook

https://www.qogdata.pol.gu.se/data/codebook_ei_sept21_august2023.pdf

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust their license without previous warning.

More detailed information on the dataset can be found at the following web page: <https://www.gu.se/en/quality-government/qog-data/data-downloads/environmental-indicators-dataset>

2.1.1 Identifiers

Variables in this section alone or in combination uniquely identify rows in the dataset.

2.1.1.1 Country Name (cname)

Long tag: qog_ei_cname

Original tag: cname

Dataset citation: Povitkina et al. (2021)

Description:

Country Name

2.1.1.2 Country Code (ccode)

Long tag: qog_ei_ccode

Original tag: ccode

Dataset citation: Povitkina et al. (2021)

Description:

Country Code ISO

2.1.1.3 Year (year)

Long tag: qog_ei_year

Original tag: year

Dataset citation: Povitkina et al. (2021)

Description:

Year of observation

2.1.1.4 Country Name QoG (cname_qog)

Long tag: qog_ei_cname_qog

Original tag: cname_qog

Dataset citation: Povitkina et al. (2021)

Description:

Country Name QoG

2.1.1.5 Country Code QoG (ccode_qog)

Long tag: qog_ei_ccode_qog

Original tag: ccode_qog

Dataset citation: Povitkina et al. (2021)

Description:

Country Code QoG

2.1.1.6 Country Code (ccodealp)

Long tag: qog_ei_ccodealp

Original tag: ccodealp

Dataset citation: Povitkina et al. (2021)

Description:

Country Code

2.1.1.7 Country Code and Year (ccodealp_year)

Long tag: qog_ei_ccodealp_year

Original tag: ccodealp_year

Dataset citation: Povitkina et al. (2021)

Description:

Country Code and Year

2.1.1.8 Country Code COW (ccodecow)

Long tag: qog_ei_ccodecow

Original tag: ccodecow

Dataset citation: Povitkina et al. (2021)

Description:

Correlates of War country code

2.1.1.9 Country Code V-Dem (ccodevdem)

Long tag: qog_ei_ccodevdem

Original tag: ccodevdem

Dataset citation: Povitkina et al. (2021)

Description:

Country code V-Dem

2.1.1.10 County Name and Year (cname_year)

Long tag: qog_ei_cname_year

Original tag: cname_year

Dataset citation: Povitkina et al. (2021)

Description:

Country name and year

2.1.1.11 Version (version)

Long tag: qog_ei_version

Original tag: version

Dataset citation: Povitkina et al. (2021)

Description:

Version

2.1.2 Accountable Climate Targets

Dataset by: Frida Borang, Simon Felgendreher, Niklas Harring, and Asa Lofgren. The authors assess and compare the accountability of climate targets as outlined in the nationally determined contributions (NDC) of the Paris Agreement. Link to the original source: <https://www.mdpi.com/2071-1050/11/7/1861/htm>

2.1.2.1 Accountable Climate Target (act_act)

Long tag: qog_ei_act_act

Original tag: act_act

Dataset citation: Povitkina et al. (2021)

Variable citation: Boräng et al. (2019)

Description:

A binary measure of whether a country has an accountable climate target (ACT) or not. An ACT is a precise emissions target for which other countries can hold a country - and only that country - accountable. A country has an ACT if it fulfills two criteria: 1) the country's nationally determined contribution (NDC) must state an economy-wide target in reference to emission levels from a past year, a target compared to the business-as-usual scenario, or a target in terms of the CO₂ emissions per unit of gross domestic product (GDP); 2) the commitment must not be conditional upon receiving financial support from third parties. The measure is for 2015, at the time of the first NDCs.

2.1.3 Aquastat

Dataset by: Food and Agricultural Organization of the United Nations (FAO). AQUASTAT is the FAO global information system on water resources and agricultural water management. Link to the original source: <http://www.fao.org/aquastat/en/>

2.1.3.1 Renewable internal freshwater resources (bln m3) (as_rifr)

Long tag: qog_ei_as_rifr

Original tag: as_rifr

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2021)

Description:

Renewable water resources (internal and external) include average annual flow of rivers and recharge of aquifers generated from endogenous precipitation and those water resources that are not generated in the country, such as inflows from upstream countries (groundwater and surface water), and part of the water of border lakes and/or rivers. Measured in billion cubic meters (bln m3).

2.1.3.2 Water stress: freshwater withdrawal, proportion of available freshwater (as_ws)

Long tag: qog_ei_as_ws

Original tag: as_ws

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2021)

Description:

The level of water stress: freshwater withdrawal as a proportion of available freshwater resources is the ratio between total freshwater withdrawn by all major sectors and total renewable freshwater resources, after taking into account environmental flow requirements. Main sectors include agriculture, forestry and fishing, manufacturing, electricity industry, and services. This indicator is also known as water withdrawal intensity.

2.1.4 Bertelsmann Transformation Index

Dataset by: Bertelsmann Stiftung The Bertelsmann Stiftung's Transformation Index (BTI) analyzes and evaluates the quality of democracy, a market economy, and political management in 137 developing and transition countries. It measures successes and setbacks on the path towards democracy based on the rule of law and a socially responsible market economy. In-depth country reports provide the basis for assessing the state of transformation and persistent challenges and for evaluating the ability of policymakers to carry out consistent and targeted reforms. The BTI is the first cross-national comparative index that collects data to comprehensively measure the quality of governance during processes of transition. Link to the original source: <http://www.bti-project.org/en/index/>

2.1.4.1 Environmental concerns taken into account (bti_envc)

Long tag: qog_ei_bti_envc

Original tag: bti_envc

Dataset citation: Povitkina et al. (2021)

Variable citation: Donner et al. (2020)

Description:

Expert answer to the question "To what extent are environmental concerns effectively taken into account?"

The variable ranges from 1 to 10, where 1 is "Environmental concerns receive no consideration and are entirely subordinated to growth efforts. There is no environmental regulation"; 4 is "Environmental concerns receive only sporadic consideration and are often subordinated to growth efforts. Environmental regulation is weak and hardly enforced"; 7 is "Environmental concerns are taken into account but are occasionally subordinated to growth efforts. Environmental regulation and incentives are in place, but their enforcement at times is deficient"; and 10 is "Environmental concerns are effectively taken into account and are carefully balanced with growth efforts. Environmental

regulation and incentives are in place and enforced

2.1.5 Cooperation in International Climate Change Regime

Dataset by: Michèle B. Baettig, Simone Brander, Dieter M. Imboden The index and its components measure countries' cooperation within the international climate change regime. The Cooperation in International Climate Change Regime Index is an aggregate of five indicators: The United Nations Framework Convention on Climate Change (UNFCCC) and Kyoto Protocol Indicators, which measure countries' commitment to common international goals, and the Reporting, Finance, and Emission Indicators, which measure the degree to which countries follow up on the respective commitments within the international regime. Link to the original source: <https://www.sciencedirect.com/science/article/abs/pii/S1462901108000440>

2.1.5.1 Cooperation in International Climate Change Regime Index (ccci_coop)

Long tag: qog_ei_ccci_coop

Original tag: ccci_coop

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

The index aggregates the UNFCCC, Kyoto Protocol, Reporting, Finance, and Emission Indicators. All variables are summed and have equal weight except for the Emission Indicator which is given double weight. The index varies on a 0-6 scale.

2.1.5.2 Emission Indicator (ccci_em)

Long tag: qog_ei_ccci_em

Original tag: ccci_em

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

The indicator measures the status of CO2 emissions while accounting for differences in national population and different paths of economic development. Countries are assessed according to the Environmental Kuznets Curve (EKC), which indicates that the relationship between per capita CO2 emissions and per capita GDP is positive only up to a certain point of development, after which the relationship becomes negative. A +/- 50 percent interval is created for the EKC, and a trend is measured for each country from 1990 to 2002. If a country's trend is greater than the +50 percent band, the country scores 0. If a country's trend is less than the band, it scores 1.

2.1.5.3 Finance Indicator (ccci_fin)

Long tag: qog_ei_ccci_fin

Original tag: ccci_fin

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

The indicator measures how well a country has upheld its financial obligations to the core budget of the UNFCCC. Countries were evaluated according to their "Status of Contributions" reports from 1996 and 2005. A score of 1 is given if the country has paid all due payments up to the present year and at least 50 percent of the amount for the present year. The score decreases linearly to a score of 0 if the country has paid no contributions.

2.1.5.4 Kyoto Protocol Indicator (ccci_kyoto)

Long tag: qog_ei_ccci_kyoto

Original tag: ccci_kyoto

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

This two-part indicator equally weighs the willingness and promptness of a country in adopting the Kyoto Protocol. Willingness is scored as either 0.5 if a country adopted the Kyoto Protocol by the end of 2005 or 0 if it did not. Promptness is scored on a declining scale that starts at 0.5 and ends at 0. The highest score is given if a country adopted the Kyoto Protocol at its earliest possible ratification in April 1998. The lowest score is given if a country had not ratified the Kyoto Protocol by the end of 2005.

2.1.5.5 Reporting Indicator (ccci_rep)

Long tag: qog_ei_ccci_rep

Original tag: ccci_rep

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

This two-part indicator equally measures whether and how fast a country has submitted its latest National Communication (NC) on the state of its climate plan. The country is scored either 0.5 if it submitted the latest required NC before the end of 2005 or 0 if it did not. The country is given an additional 0.5 if the report was submitted before the deadline. This score decreases until reaching 0 for a submission 6 or more months after the deadline for Annex I (AI) countries, and a submission 36 months or more after the deadline for Non-Annex I (NAI) countries.

2.1.5.6 UNFCCC Indicator (ccci_unfccc)

Long tag: qog_ei_ccci_unfccc

Original tag: ccci_unfccc

Dataset citation: Povitkina et al. (2021)

Variable citation: Bättig et al. (2008)

Description:

This two-part indicator equally weighs the willingness and promptness of a country in adopting the United Nations Framework Convention on Climate Change (UNFCCC). Willingness is scored as either 0.5 if a country adopted the UNFCCC by the end of 2005 or 0 if it did not. Promptness is scored on a declining scale that starts at 0.5 and ends at 0. The highest score is given if the country adopted the UNFCCC at its earliest possible ratification date in July 1992. The lowest score is given if a country had not ratified the UNFCCC at the time of the Kyoto Conference in December 1997.

2.1.6 Climate Change Knowledge Portal

Dataset by: The World Bank Group The Climate Change Knowledge Portal provides global data on historical and future climate, vulnerabilities, and impacts. The data on historical temperature and rainfall data included in this compilation comes from the historical CRU dataset. The CRU TS version 4.04 gridded historical dataset is derived from observational data and provides quality-controlled temperature and rainfall values from thousands of weather stations worldwide, as well as derivative products including monthly climatologies and long-term historical climatologies. The dataset is produced by the Climatic Research Unit (CRU) of the University of East Anglia (UEA) CRU-(Gridded Product). In order to present historical climate conditions, the World Bank Group's Climate Change Knowledge Portal (CCKP) uses the globally available observational datasets derived from CRU to quantify changes in mean annual temperature and mean annual precipitation for the period 1901-2019 per country. Link to the original source: <https://climateknowledgeportal.worldbank.org>

2.1.6.1 Annual average rainfall (cckp_rain)*Long tag:* qog_ei_cckp_rain*Original tag:* cckp_rain*Dataset citation:* Povitkina et al. (2021)*Variable citation:* The World Bank (2021a)*Description:*

Annual average rainfall in millimeters.

2.1.6.2 Annual average temperature (cckp_temp)*Long tag:* qog_ei_cckp_temp*Original tag:* cckp_temp*Dataset citation:* Povitkina et al. (2021)*Variable citation:* The World Bank (2021a)*Description:*

Annual average temperature in Celsius.

2.1.7 Climate Change Laws of the World

Dataset by: Grantham Research Institute on Climate Change and the Environment Climate change-related laws and policies refer to legal documents related to reducing energy demand, promoting low carbon energy supply, low-carbon buildings, carbon pricing, lower industry emissions, tackling deforestation and promoting sustainable land use, other mitigation efforts, research and development, sustainable transportation, enhancing adaptation capabilities, and natural disaster risk management. The dataset only included laws and policies that have been passed by legislative branches or published by executive branches, and that are no longer in draft form. The dataset also captures major amendments to legislation. Laws that are outdated, either because they have been repealed, replaced, or reversed, are not included. The database distinguishes between Laws or legislative acts (e.g. acts, laws, decree-laws), which were passed by a parliament or equivalent legislative authority, and Policies, or other executive provisions (e.g. presidential decrees, executive orders, regulations, government policies, strategies, or plans), which were published or decreed by the government, president, or equivalent executive authority. Link to the original source: <https://climate-laws.org/>

2.1.7.1 Climate change policy/executive provision in place (ccl_exepp)*Long tag:* qog_ei_ccl_exepp*Original tag:* ccl_exepp*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)*Description:*

Number of climate change-related policies or other executive provisions (e.g., presidential decrees, executive orders, regulations, government policies, strategies, or plans), which were published or decreed by the government, president, or equivalent executive authority, in the recorded year.

2.1.7.2 Climate change law in place (ccl_leglp)*Long tag:* qog_ei_ccl_leglp*Original tag:* ccl_leglp*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)*Description:*

Number of climate change-related laws or legislative acts (e.g. acts, laws, decree-laws), which

were passed by a parliament or equivalent legislative authority, in the recorded year.

2.1.7.3 Climate change law or policy in place (ccl_lpp)

Long tag: qog_ei_ccl_lpp

Original tag: ccl_lpp

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Number of climate change-related laws (legislative acts) and policies (executive provisions) adopted per year.

2.1.7.4 Climate change mitigation law or policy in place (ccl_mitlpp)

Long tag: qog_ei_ccl_mitlpp

Original tag: ccl_mitlpp

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Number of laws (legislative acts) or policies (executive provisions) related to climate change mitigation adopted per year.

Mitigation laws and policies refer to a legislative or executive disposition focused on curbing a country's greenhouse gases emissions in one sector or more. Measures can be directly related to emissions reductions, such as laws establishing a national carbon budget or cap and trade system, or indirectly related, such as laws or policies establishing relevant institutions or providing additional funding for research and development into low carbon technologies. Laws and policies addressing forests and land use are included as long as they explicitly support climate change mitigation through activities that reduce emissions and increase carbon removals. General forest management and conservation laws are not included, even if they may have implicit consequences for climate change mitigation.

2.1.7.5 Number of climate change policies/executive provisions (ccl_nexep)

Long tag: qog_ei_ccl_nexep

Original tag: ccl_nexep

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Cumulative sum of climate change-related policies or other executive provisions (e.g. presidential decrees, executive orders, regulations, government policies, strategies, or plans), which were published or decreed by the government, president, or equivalent executive authority.

2.1.7.6 Number of climate change laws (ccl_nlegl)

Long tag: qog_ei_ccl_nlegl

Original tag: ccl_nlegl

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Cumulative sum of climate change-related laws or legislative acts (e.g. acts, laws, decree-laws),

which were passed by a parliament or equivalent legislative authority.

2.1.7.7 Number of climate change laws and policies (ccl_nlp)

Long tag: qog_ei_ccl_nlp

Original tag: ccl_nlp

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Cumulative sum of laws (legislative acts) and policies (executive provisions) related to climate change.

2.1.7.8 Number of climate change mitigation laws and policies (ccl_nmitlp)

Long tag: qog_ei_ccl_nmitlp

Original tag: ccl_nmitlp

Dataset citation: Povitkina et al. (2021)

Variable citation: Grantham Research Institute on Climate Change and the Environment & Sabin Center for Climate Change Law (2021)

Description:

Cumulative sum of laws (legislative acts) and policies (executive provisions) related to climate change mitigation.

Mitigation laws and policies refer to a legislative or executive disposition focused on curbing a country's greenhouse gases emissions in one sector or more. Measures can be directly related to emissions reductions, such as laws establishing a national carbon budget or cap and trade system, or indirectly related, such as laws or policies establishing relevant institutions or providing additional funding for research and development into low carbon technologies. Laws and policies addressing forests and land use are included as long as they explicitly support climate change mitigation through activities that reduce emissions and increase carbon removals. General forest management and conservation laws are not included, even if they may have implicit consequences for climate change mitigation.

2.1.8 EDGAR - Global Air Pollutant Emissions

Dataset by: European Commission The Emissions Database for Global Atmospheric Research (EDGAR) provides global past and present-day anthropogenic emissions of greenhouse gases and air pollutants by country and on a spatial grid. EDGAR provides emission data for the following air pollutants: Ozone precursor gases: Carbon Monoxide (CO), Nitrogen Oxides (NOx), Non-Methane Volatile Organic Compounds (NMVOC) and Methane (CH₄). Acidifying gases: Ammonia (NH₃), Nitrogen oxides (NOx) and Sulfur Dioxide (SO₂). Primary particulates: Fine Particulate Matter (PM₁₀ and PM_{2.5} and Carbonaceous speciation (BC, OC). Emissions from large-scale biomass burning with Savannah burning, forest fires, and sources and sinks from land-use, land-use change, and forestry (LULUCF) are excluded. For the energy-related sectors, the activity data are mainly based on the energy balance statistics of IEA (2017) (http://www.oecd-ilibrary.org/energy/co2-emissions-from-fuel-combustion-2017_co2_-fuel-2017-en), whereas the activity data for the agricultural sectors originate mainly from FAO (2018)(<http://www.fao.org/faostat/en/home>). Additional information can be found in Crippa et al. (2019) Link to the original source: https://edgar.jrc.ec.europa.eu/dataset_ap50

2.1.8.1 BC emissions (edgar_bc)

Long tag: qog_ei_edgar_bc

Original tag: edgar_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total BC (black carbon, particulate matter) emissions, aggregated across sectors per country. Units are kilotonnes (kt) of black carbon per year.

2.1.8.2 CH4 emissions (edgar_ch4)

Long tag: qog_ei_edgar_ch4

Original tag: edgar_ch4

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total CH4 (methane) emissions aggregated across sectors per country. Units are kilotonnes (kt) of CH4 per year.

2.1.8.3 CO emissions (edgar_co)

Long tag: qog_ei_edgar_co

Original tag: edgar_co

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total CO (carbon monoxide) emissions aggregated across sectors per country. Emissions from large-scale biomass burning with Savannah burning, forest fires, and sources and sinks from land-use, land-use change, and forestry (LULUCF) are excluded. Units are kilotonnes (kt) of CO per year.

2.1.8.4 N2O emissions (edgar_n2o)

Long tag: qog_ei_edgar_n2o

Original tag: edgar_n2o

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total N2O (nitrous oxide) emissions aggregated across sectors per country. Units are kilotonnes (kt) of N2O per year.

2.1.8.5 NH3 emissions (edgar_nh3)

Long tag: qog_ei_edgar_nh3

Original tag: edgar_nh3

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total NH3 (ammonia) emissions aggregated across sectors per country. Units are kilotonnes (kt) of NH3 per year.

2.1.8.6 NMVOC emissions (edgar_nmvoc)

Long tag: qog_ei_edgar_nmvoc

Original tag: edgar_nmvoc

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total NMVOC (non-methane volatile organic compounds) emissions aggregated across sectors per country. Units are kilotonnes (kt) of NMVOC per year.

2.1.8.7 NOx emissions (edgar_nox)

Long tag: qog_ei_edgar_nox

Original tag: edgar_nox

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total NOx (nitrogen oxides) emissions aggregated across sectors per country. Units are kilotonnes (kt) of NOx per year.

2.1.8.8 OC emissions (edgar_oc)

Long tag: qog_ei_edgar_oc

Original tag: edgar_oc

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total OC (organic carbon, particulate matter) emissions aggregated across sectors per country. Units are kilotonnes (kt) of OC per year.

2.1.8.9 PM10 emissions (edgar_pm10)

Long tag: qog_ei_edgar_pm10

Original tag: edgar_pm10

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total PM10 (particulate matter, 10 micrometers or smaller) emissions aggregated across sectors per country. Units are kilotonnes (kt) of PM10 per year.

2.1.8.10 PM2.5 emissions (edgar_pm25)

Long tag: qog_ei_edgar_pm25

Original tag: edgar_pm25

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total PM2.5 (particulate matter, 2.5 micrometers or smaller) emissions aggregated across sectors per country. Units are kilotonnes (kt) of PM2.5 per year.

2.1.8.11 SO2 emissions (edgar_so2)

Long tag: qog_ei_edgar_so2

Original tag: edgar_so2

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total SO2 (sulfur dioxide) emissions aggregated across sectors per country. Units are kilotonnes (kt) of SO2 per year.

2.1.9 EDGAR - Fossil CO2 Emissions of All World Countries

Dataset by: European Commission The Emissions Database for Global Atmospheric Research (EDGAR) provides global past and present-day anthropogenic emissions of greenhouse gases and air pollutants by country and on a spatial grid. Fossil CO2 emissions of all world countries from EDGAR provides an independent estimate of CO2 emissions for each world country, based on a robust and

consistent methodology stemming from the latest IPCC guidelines and most recent activity data. Fossil CO2 emission data are available for the time period 1970-2019. Link to the original source: https://edgar.jrc.ec.europa.eu/report_2020

2.1.9.1 CO2 emissions per GDP (edgar_co2gdp)

Long tag: qog_ei_edgar_co2gdp

Original tag: edgar_co2gdp

Dataset citation: Povitkina et al. (2021)

Description:

The total CO2 (carbon dioxide) emissions per country, divided by each country's respective GDP (gross domestic product). Units are tonnes of CO2 per thousand US dollars of GDP.

Includes all fossil CO2 sources, such as fossil fuel combustion, non-metallic mineral processes (e.g., cement production), metal (ferrous and non-ferrous) production processes, urea production, agricultural liming, and solvents use. Large-scale biomass burning with Savannah burning, forest fires, and sources and sinks from land-use, land-use change, and forestry (LULUCF) are excluded.

2.1.9.2 CO2 emissions per capita (edgar_co2pc)

Long tag: qog_ei_edgar_co2pc

Original tag: edgar_co2pc

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total CO2 (carbon dioxide) emissions per country, divided by each country's respective population. Units are tonnes of CO2 per capita per year.

Includes all fossil CO2 sources, such as fossil fuel combustion, non-metallic mineral processes (e.g., cement production), metal (ferrous and non-ferrous) production processes, urea production, agricultural liming, and solvents use. Large-scale biomass burning with Savannah burning, forest fires, and sources and sinks from land-use, land-use change, and forestry (LULUCF) are excluded.

2.1.9.3 CO2 emissions total (edgar_co2t)

Long tag: qog_ei_edgar_co2t

Original tag: edgar_co2t

Dataset citation: Povitkina et al. (2021)

Variable citation: Crippa et al. (2020)

Description:

The total CO2 (carbon dioxide) emissions aggregated across sectors per country. Includes all fossil CO2 sources, such as fossil fuel combustion, non-metallic mineral processes (e.g., cement production), metal (ferrous and non-ferrous) production processes, urea production, agricultural liming, and solvents use. Large-scale biomass burning with Savannah burning, forest fires, and sources and sinks from land-use, land-use change, and forestry (LULUCF) are excluded. Units are kilotonnes (kt) of CO2 per year.

2.1.10 The Environmental Democracy Index

Dataset by: The Access Initiative (TAI) and World Resources Institute (WRI) The Environmental Democracy Index measures the degree to which countries have enacted legally binding rules that provide for environmental information collection and disclosure, public participation across a range of environmental decisions, and fair, affordable, and independent avenues for seeking justice and challenging decisions that impact the environment. The index evaluates 70 countries across 75 legal indicators, based on objective and internationally recognized standards established by the United Nations Environment Programmes (UNEP) Bali Guidelines. EDI also includes a supplemental set

of 24 limited practice indicators that provide insight on a country's performance in implementation. Link to the original source: <https://www.environmentaldemocracyindex.org/node/12732.html>

2.1.10.1 Environmental Democracy Index (edi_edi)

Long tag: qog_ei_edi_edi

Original tag: edi_edi

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

EDI measures to which degree countries have enacted legally binding rules that provide for environmental information collection and disclosure, public participation across a range of environmental decisions, and fair, affordable, and independent avenues for seeking justice and challenging decisions that impact the environment.

It is an average of 3 pillars that measure:

- 1) the right to freely access information on environmental quality and problems (Access to information pillar);
- 2) the right to participate meaningfully in decision-making (Participation pillar);
- 3) the right to seek enforcement of environmental laws or compensation for harm (Justice pillar).

The pillars are calculated by combining 75 legal indicators that are scored from 0 (worst) to 3 (best), producing an overall score that falls within this same range. The pillars are given equal weight when creating an average.

2.1.10.2 Affordable access to relief and remedy (Guideline 20) (edi_gaarr)

Long tag: qog_ei_edi_gaarr

Original tag: edi_gaarr

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent states ensure that the access of members of the public concerned to review procedures relating to the environment is not prohibitively expensive and to which extent they consider the establishment of appropriate assistance mechanisms to remove or reduce financial and other barriers to access to justice.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (20.1) To what extent are there legal mechanisms in place to ensure that access to review procedures relating to the environment for members of the public concerned is not prohibitively expensive?; (20.2) To what extent does the law provide assistance mechanisms to reduce financial barriers to access to justice?; (20.3) To what extent does the law provide assistance mechanisms to reduce gender-related non-financial barriers to access to justice?; (20.4) To what extent does the law provide assistance mechanisms to reduce other non-financial and non-gender barriers to access to justice?; (P20.1) In the last 5 years, has a public interest case relating to the environment or natural resources been filed which was supported by government legal aid?; (P20.2) In the last 10 years, have there been cases relating to the environment or natural resources where the costs of proceedings was awarded against a public interest complainant/plaintiff/petitioner (c/p/p)?; (P20.3) In the last 5 years have there been cases related to the environment or natural resources where the costs of proceedings were awarded in favor of a public interest complainant/plaintiff/petitioner (c/p/p)?

2.1.10.3 Alternative dispute resolution for environmental issues (Guideline 26) (edi_gadrei)

Long tag: qog_ei_edi_gadrei

Original tag: edi_gadrei

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states encourage the development and use of alternative dispute resolution mechanisms where these are appropriate. In scoring this indicator, “alternate dispute resolution mechanisms” include mediation, conciliation, or arbitration adopted by institutions as a means of resolving environmental disputes.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (26.1) To what extent does the law provide for the possibility to use alternative dispute resolution mechanisms to address violations of the right of access to environmental information, public participation or cases of environmental harm?; (26.2) To what extent does the law provide incentives for the use of alternative dispute resolution mechanisms where these are appropriate?; (P26.1) In the last 5 years, has a public interest case relating to the environment or natural resources been solved by an alternate conflict resolution method (such as mediation, arbitration and conciliation)?

2.1.10.4 Awareness and education about remedies and relief (Guideline 23) (edi_gaerr)

Long tag: qog_ei_edi_gaerr

Original tag: edi_gaerr

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states provide adequate information to the public about the procedures operated by courts of law and other relevant bodies in relation to environmental issues.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (23.1) To what extent does the law require the State or State agencies or institutions to provide information to the public about court procedures relating to environmental issues?; (23.2) To what extent does the law require the State or State agencies or institutions to provide information to the public about review procedures relating to environmental issues provided by bodies other than courts of law?; (P23.1) Is there an easily understandable explanation of court procedures in the national language(s) on the website or office of the highest national court or the apex national environmental agency?

2.1.10.5 Accessibility of information requests (Guideline 1) (edi_gair)

Long tag: qog_ei_edi_gair

Original tag: edi_gair

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures the existence of a clear positive legal mandate that gives the public the right to access environmental information upon request.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (1.1) To what extent does the law mandate access to environmental information to be provided upon request?; (1.2) To what extent does the law provide for natural or legal persons’ access to environmental information?; (1.3) To what extent does the law make access to environmental information affordable?; (1.4) To what extent does the law provide for timely access to environmental information?; (1.5) To what extent does the law include public authorities under access to environmental information provisions?; (1.6) To what extent does the law not require proof of legal or other interest for access to environmental information?

2.1.10.6 Due account of public comments (Guideline 11) (edi_gapc)

Long tag: qog_ei_edi_gapc

Original tag: edi_gapc

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that due account is taken of the comments of the public in the decision-making process and that the decisions are made public.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (11.1) To what extent do the laws concerning environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making require the State or State agencies at the national level to take due account of the public's comments in decision-making relating to the environment?; (11.2) To what extent do the laws concerning environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making require that decisions relating to the environment are made public?; (P11.1) In the three most recent large-scale extractive or development projects, did the relevant agency respond to public comments on the environmental impact assessment and make the responses available to the public?

2.1.10.7 Broad standing (Guideline 18) (edi_gbs)

Long tag: qog_ei_edi_gbs

Original tag: edi_gbs

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states provide broad interpretation of standing in proceedings concerned with environmental matters with a view to achieving effective access to justice.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (18.1) To what extent does the law recognize broad legal standing in proceedings concerned with environmental matters?; (P18.1) In the last 5 years, have NGOs been granted legal standing by national courts in public interest environmental cases?

2.1.10.8 Effective enforcement (Guideline 22) (edi_gee)

Long tag: qog_ei_edi_gee

Original tag: edi_gee

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure the timely and effective enforcement of decisions in environmental matters taken by courts of law and by administrative and other relevant bodies.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (22.1) To what extent does the law provide for the effective enforcement of criminal court decisions relating to the environment?; (22.2) To what extent does the law require the enforcement of criminal court decisions relating to the environment to be timely?; (22.3) To what extent does the law provide for the effective enforcement of civil court decisions relating to the environment?; (22.4) To what extent does the law require the enforcement of civil court decisions relating to the environment to be timely?; (22.5) To what extent does the law provide for effective enforcement of decisions relating to the environment taken by administrative and other relevant bodies?; (22.6) To what extent does

the law ensure the enforcement of administrative decisions relating to the environment will be timely?

2.1.10.9 Environmental information in the public domain (Guideline 2) (edi_gepd)

Long tag: qog_ei_edi_gepd

Original tag: edi_gepd

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states provide environmental information in the public domain that include, among other things, information about environmental quality, environmental impacts on health and factors that influence them, in addition to information about legislation and policy, and advice about how to obtain information.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (2.1) To what extent does the law require information on environmental quality to be made proactively available to the public?; (2.2) To what extent does the law require environmental information on environmental factors that influence health be placed in the public domain?; (2.3) To what extent does the law require information on environmental laws and policy be placed in the public domain?; (2.4) To what extent does the law require publicly available information and advice on how to obtain environmental information?; (P2.1) Are real time air quality data for the capital city of your country made available online by the government?; (P2.2) In the last two years, has annual drinking water quality data for water services in your capital city been proactively provided to consumers either by mail (post) or online and do they meet the minimum standards established by the regulatory agency?

2.1.10.10 Early public participation (Guideline 8) (edi_gepp)

Long tag: qog_ei_edi_gepp

Original tag: edi_gepp

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure opportunities for early and effective public participation in decision-making related to the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (8.1) To what extent does the law require the public concerned to have opportunities to participate in decision making related to the environment?; (8.2) To what extent does the law require public participation opportunities to be provided early in the decision-making process?; (8.3) To what extent does the law require that the public concerned be provided with information about its opportunities to participate early in the decision-making process?; (P8.1) Choose three recent controversial development projects (in terms of press coverage and potential cost and/or revenue of project) that were approved through an Environmental Impact Assessment (EIA) process under national law. Were public notices given seeking comments on the EIA or its terms of reference?

2.1.10.11 Early warning information (Guideline 6) (edi_gewi)

Long tag: qog_ei_edi_gewi

Original tag: edi_gewi

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that all information that would enable the public to take measures to prevent imminent threat of harm to human health or the environment is disseminated immediately.

This indicator is an arithmetic average of expert answers to question on a scale from 0 (worst) to 3 (best): (6.1) When there is an imminent threat of harm to human health or the environment, to what extent does the law obligate or mandate the government agencies to immediately disseminate information to the public that enables it to take preventive action?

2.1.10.12 Fair, timely, and independent review (Guideline 19) (edi_gftir)

Long tag: qog_ei_edi_gftir

Original tag: edi_gftir

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states provide effective procedures for timely review by courts of law or other independent and impartial bodies, or administrative procedures, of issues relating to the implementation and enforcement of laws and decisions pertaining to the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (19.1) To what extent does the law provide procedures for the review of issues relating to the implementation and enforcement of laws and decisions pertaining to the environment by courts or other bodies, or administrative procedures?; (19.2) To what extent does the law require review procedures regarding the implementation and enforcement of laws and decisions pertaining to the environment to be decided by impartial and independent courts or bodies?; (19.3) To what extent does the law require review procedures regarding the implementation and enforcement of laws and decisions pertaining to the environment to be timely?; (19.4) To what extent does the law require review procedures regarding the implementation and enforcement of laws and decisions pertaining to the environment to be fair and equitable?; (19.5) To what extent does the law require review procedures regarding the implementation and enforcement of laws and decisions pertaining to the environment to be open and transparent? (P19.1) In the last 5 years have there been sanctions or corrective actions imposed by a national court of law or other independent and impartial body, for violation of laws and decisions pertaining to the environment?

2.1.10.13 Grounds for refusal (Guideline 3) (edi_ggr)

Long tag: qog_ei_edi_ggr

Original tag: edi_ggr

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states clearly define in their law the specific grounds on which a request for environmental information can be refused. The grounds for refusal are to be interpreted narrowly, taking into account the public interest served by disclosure.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (3.1) To what extent does the law clearly define specific grounds on which a request for environmental information can be refused?; (3.2) To what extent does the law require environmental information that is covered by a ground for refusal to be severed (separated) from the rest of the information before being released to the requester?; (3.3) To what extent does the law require the decision-maker to take into account the public interest served by disclosure when considering exemptions (grounds for refusal)?

2.1.10.14 Information collection and management (Guideline 4) (edi_gicm)

Long tag: qog_ei_edi_gicm

Original tag: edi_gicm

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that their competent public authorities regularly collect and update relevant environmental information, including information on environmental performance and compliance by operators of activities potentially affecting the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (4.1) To what extent are competent public authorities mandated by law to regularly collect and update relevant environmental information?; (4.2) To what extent does the law mandate the public authorities to comprehensively monitor the environmental performance and compliance by operators of activities potentially affecting the environment, and to collect and update such information?; (4.3) To what extent is there a system established by the law ensuring adequate public information about proposed and existing activities that may significantly affect the environment?; (P4.1) Does a national agency in your country ensure that daily air emission and waste water discharges by large-scale industries at a facility level are proactively made publicly available either online, through a public register or at a library; if so, is that information comparable to a national standard?

2.1.10.15 Informed participation (Guideline 10) (edi_gip)

Long tag: qog_ei_edi_gip

Original tag: edi_gip

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that all information relevant for decision-making related to the environment is made available, in an objective, understandable, timely, and effective manner, to the members of the public concerned.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (10.1) To what extent do the laws concerning: environmental impact assessments, pollution control permits, forest concessions, extractive industries, protected areas and terrestrial biodiversity, and environmental policy-making require all information relevant to decision-making processes relating to the environment to be made available to the public concerned, without the public having to make an official information request?; (10.2) To what extent do the laws concerning environmental impact assessments, pollution control permits, forest concessions, extractive industries, protected areas and terrestrial biodiversity, and environmental policy-making require that proactively released information relevant to decision-making be understandable to the public concerned?; (10.3) To what extent do the laws concerning environmental impact assessments, pollution control permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making require the information relevant to decision-making to be provided in a timely fashion to the public concerned?; (P10.1) Are the Environmental Impact Assessments for development projects accessible to the public online or at a national government agency?; (P10.2) Is information on wastewater discharge and air emission permit violations available to the public online or at a government agency?; (P10.3) Are extractive industry licenses/permits available to the public online or at a government agency?; (P10.4) During the past three years, in the process of granting forest use contracts, has the relevant agency made publicly available information related to such contracts?; (P10.5) Are the forest use contracts, once finalized, made available to the public online or at a government agency?

2.1.10.16 Integrating public input for rule-making (Guideline 13) (edi_gipirm)

Long tag: qog_ei_edi_gipirm

Original tag: edi_gipirm

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states consider appropriate ways of ensuring, at an appropriate stage, public input into the preparation of legally binding rules that might have a significant effect on the environment and into the preparation of policies, plans and programmes relating to the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (13.1) To what extent does the law require opportunities for public input at an appropriate stage during preparation of legally binding rules (rule-making or preparation of subsidiary legislation, regulations, etc.) that might have a significant effect on the environment?; (13.2) To what extent do the laws concerning environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, protected areas and terrestrial biodiversity, and environmental policy-making require the State or state agencies to provide opportunities for public input at an appropriate stage of the preparation of policies?; (13.3) To what extent do the laws concerning environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, protected areas and terrestrial biodiversity, and environmental policy-making require there to be opportunities for public input at an appropriate stage of the preparation of plans relating to the environment?; (13.4) To what extent does the law require there to be opportunities for public input at an appropriate stage of the preparation of programs relating to the environment?

2.1.10.17 Information request appeals (Guideline 15) (edi_gira)

Long tag: qog_ei_edi_gira

Original tag: edi_gira

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that any natural or legal person who considers that his or her request for environmental information has been unreasonably refused, in part or in full, inadequately answered or ignored, or in any other way not handled in accordance with applicable law, has access to a review procedure before a court of law or other independent and impartial body to challenge such a decision, act or omission by the public authority in question.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (15.1) To what extent do the laws concerning environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, protected areas and terrestrial biodiversity, and environmental policy-making provide for access to a review procedure in cases where environmental information request have been denied?; (15.2) To what extent does the law make the review available to all natural or legal persons?; (15.3) To what extent does the law provide access to a review procedure before a court of law or other independent and impartial body in cases when an environmental information request has been denied?; (P15.1) Is there a court, tribunal or other independent or impartial body at the national level with a physical office to receive and process public complaints about the refusal of environmental information?

2.1.10.18 Public access to judicial and administrative decisions (Guideline 24) (edi_gpajad)

Long tag: qog_ei_edi_gpajad

Original tag: edi_gpajad

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that decisions relating to the environment taken by a court of law, other independent and impartial or administrative body, are publicly available, as appropriate and in accordance with national law.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (24.1) To what extent does the law require judicial decisions relating to the environment to be made publicly available?; (24.2) To what extent does the law require decisions relating to the environment taken by administrative bodies to be made publicly available?; (24.3) To what extent does the law require decisions relating to the environment taken by other independent and impartial bodies to be made publicly available?; (P24.1) Are the decisions of the last three environmental or natural resource cases decided by a national court, tribunal or other judicial body available to the public online or at the office of that court, tribunal or body?

2.1.10.19 Prompt, effective remedies (Guideline 21) (edi_gper)

Long tag: qog_ei_edi_gper

Original tag: edi_gper

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states provide a framework for prompt, adequate and effective remedies in cases relating to the environment, such as interim and final injunctive relief.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (21.1) To what extent does the law require adequate and effective remedies in cases relating to the environment?; (21.2) To what extent does the law require remedies in cases relating to the environment to be provided promptly?; (21.3) To what extent is interim and/or final injunctive relief available under the law?; (21.4) To what extent is compensation available as a remedy under the law?; (21.5) To what extent is restitution available as a remedy under the law?; (21.6) To what extent is restoration of the environment available as a remedy under the law?; (P21.1) In the last 5 years, have there been injunctions/stay orders/interdicts issued by a court, tribunal or other judicial body in environmental or natural resource cases?

2.1.10.20 Public participation appeals (Guideline 16) (edi_gppa)

Long tag: qog_ei_edi_gppa

Original tag: edi_gppa

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that the members of the public concerned have access to a court of law or other independent and impartial body to challenge the substantive and procedural legality of any decision, act or omission relating to public participation in decision-making in environmental matters.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (16.1) To what extent does the law entitle members of the public concerned to challenge the substantive legality of any decision, act or omission relating to decision-making in environmental matters which is subject to public participation?; (16.2) To what extent does the law entitle members of the public concerned to challenge the procedural legality of any decision, act or omission relating to decision-making in environmental matters subject to public participation?; (16.3) To what extent does the law require that a court of law or other independent and impartial body hear challenges to substantive and/or procedural legality?; (P16.1) In the last 5 years, have public interest environmental or natural resource cases been filed before a court, tribunal or other body? If court records are not public information, check media reports.

2.1.10.21 Proactive public consultation (Guideline 9) (edi_gppc)

Long tag: qog_ei_edi_gppc

Original tag: edi_gppc

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states make efforts to seek proactively public participation in a transparent and consultative manner, including efforts to ensure that members of the public concerned are given an adequate opportunity to express their views.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (9.1) To what extent do the laws concerning environmental impact assessments, pollution control permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making obligate the State or state agencies at the national level to proactively seek public participation?; (9.2) To what extent do the laws concerning: environmental impact assessments, pollution control permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making obligate the State or State agencies at the national level to give members of the public concerned an adequate opportunity to express their views?

2.1.10.22 Public participation review (Guideline 12) (edi_gppr)

Long tag: qog_ei_edi_gppr

Original tag: edi_gppr

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that when a review process is carried out where previously unconsidered environmentally significant issues or circumstances have arisen, the public should be able to participate in any such review process to the extent that circumstances permit.

This indicator is an arithmetic average of expert answers to question on a scale from 0 (worst) to 3 (best): (12.1) To what extent do the laws concerning: environmental impact assessments, pollution control standards and permits, forest concessions, extractive industries, biodiversity and terrestrial protected areas, and environmental policy-making require the State or state agencies to provide for a public review process for decisions relating to the environment if previously unconsidered environmental impacts become apparent?

2.1.10.23 Right of public to challenge state or private actors (Guideline 17) (edi_grpcspa)

Long tag: qog_ei_edi_grpcspa

Original tag: edi_grpcspa

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states ensure that the members of the public concerned have access to a court of law or other independent and impartial body or administrative procedures to challenge any decision, act or omission by public authorities or private actors that affects the environment or allegedly violates the substantive or procedural legal norms of the State related to the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (17.1) To what extent does the law give rights to the public concerned to challenge any decision, act or omission by public authorities that allegedly violates the procedural legal norms of the state relating to the environment?; (17.2) To what extent does the law give rights to the public concerned to challenge any decision, act or omission by private actors that allegedly violates the substantive legal norms of the state relating to the environment?; (17.3) To what extent does the

law give rights to the public concerned to challenge any decision, act or omission by private actors that allegedly violates the procedural legal norms of the State relating to the environment?; (17.4) To what extent does the law require the challenges referred to in indicators 1-3 to be heard by an independent and impartial body?; (P17.1) Have there been cases in the last 5 years when civil society filed a lawsuit against a polluter in a national court?; (P17.2) Have there been cases in the last 5 years when civil society filed a lawsuit in a national court challenging a government decision, policy, or rule affecting the environment?

2.1.10.24 State of the environment report (Guideline 5) (edi_gser)

Long tag: qog_ei_edi_gser

Original tag: edi_gser

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The indicator measures to which extent the states periodically prepare and disseminate at reasonable intervals up-to-date information on the state of the environment, including information on its quality and on pressures on the environment.

This indicator is an arithmetic average of expert answers to questions on a scale from 0 (worst) to 3 (best): (5.1) To what extent does the law mandate the government to publish reports on the state of the environment (i.e. a State of the Environment report)?; (5.2) To what extent does the law require the publication of a State of the Environment report to be periodic at reasonable intervals?; (5.3) Does the law require the report to be comprehensive in the information that it provides?; (5.4) To what extent does the law require the report to contain up-to date information?; (P5.1) In the last 10 years has a national government agency regularly published State of the Environment Reports? (Regular is at fixed intervals of five years or less)

2.1.10.25 Justice Pillar Score (edi_jp)

Long tag: qog_ei_edi_jp

Original tag: edi_jp

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The Justice Pillar Score combines guidelines *Information request*, *Public participation*, *Right of public to challenge state or private actors*, *Broad standing*, *Fair, timely, and independent review*, *Affordable access to relief and remedy*, *Prompt, effective remedies*, *Effective enforcement*, *Awareness and education about remedies and relief*, *Public access to judicial and administrative decisions*, and *Alternative dispute resolution for environmental issues*, using an arithmetic average on a scale from 0 (worst) to 3 (best).

2.1.10.26 Access to Information Pillar Score (edi_pati)

Long tag: qog_ei_edi_pati

Original tag: edi_pati

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The Access to Information Pillar Score combines guidelines *Accessibility of information requests*, *Environmental information in the public domain*, *Ground for refusal*, *Information collection and management*, and *State of the environment report*, and

quot;quot;Early warning informationquot;quot;, using an arithmetic average on a scale from 0 (worst) to 3 (best).

2.1.10.27 Participation Pillar Score (edi_pp)

Long tag: qog_ei_edi_pp

Original tag: edi_pp

Dataset citation: Povitkina et al. (2021)

Variable citation: World Resource Institute & the Access Initiative (2015)

Description:

The Participation Pillar Score combines guidelines quot;quot;Early public participationquot;quot;, quot;quot;Proactive public consultationquot;quot;, quot;quot;Informed participationquot;quot;, quot;quot;Due account of public commentsquot;quot;, quot;quot;Public participation reviewquot;quot;, and quot;quot;Integrating public input for rule-makingquot;quot;, using an arithmetic average on a scale from 0 (worst) to 3 (best).

2.1.11 Global Footprint Data

Dataset by: Global Footprint Network The National Footprint Accounts (NFAs) measure the ecological resource use and resource capacity of nations over time. Based on approximately 15,000 data points per country per year, the Accounts calculate the Footprints of 232 countries, territories, and regions from 1961 to the present, providing the core data needed for all Ecological Footprint analysis worldwide. Link to the original source: http://www.footprintnetwork.org/en/index.php/GFN/page/footprint_data_and_results/

2.1.11.1 Biocapacity Per Person (gha per capita) (ef_bcpc)

Long tag: qog_ei_ef_bcpc

Original tag: ef_bcpc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

Total biocapacity divided by the population size. Units are global hectares (gha) per capita.

2.1.11.2 Total Biocapacity (total gha) (ef_bct)

Long tag: qog_ei_ef_bct

Original tag: ef_bct

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

Biocapacity is the capacity of ecosystems to regenerate what people demand from those surfaces. It is an aggregate measure of the amount of area available, weighted by the productivity of that area. Biocapacity is therefore the ecosystems' capacity to produce biological materials used by people and to absorb waste material generated by humans, under current management schemes and extraction technologies. Biocapacity is calculated by multiplying the physical area by the yield factor and the appropriate equivalence factor. It is expressed in global hectares (gha).

2.1.11.3 Built-up land Footprint of consumption (gha per person) (ef_bul)

Long tag: qog_ei_ef_bul

Original tag: ef_bul

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

The built-up land footprint is calculated based on the area of land covered by human infrastructure: transportation, housing, and industrial structures. Built-up land may occupy what would previously have been cropland. Measured in global hectares (gha) per person.

2.1.11.4 Built-up land biocapacity per capita (ef_bul_bc)

Long tag: qog_ei_ef_bul_bc

Original tag: ef_bul_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

Built-up land biocapacity measures how much of the regenerative capacity is occupied by infrastructure (built-up land). Regenerative capacity is an aggregate measure of the amount of area available, weighted by the productivity of that area. It represents the ability of a biosphere to produce crops, livestock (pasture), timber products (forest), and seafood as well as the biosphere's ability to uptake CO₂ in forests. The measure of built-up land biocapacity is divided by the population size.

2.1.11.5 Built-up land Footprint of production (gha per person) (ef_bulp)

Long tag: qog_ei_ef_bulp

Original tag: ef_bulp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The country's built-up area (roads, factories, cities), divided by the population size. The measurement units are global hectares (gha) per person.

2.1.11.6 Carbon Footprint of consumption (gha per person) (ef_carb)

Long tag: qog_ei_ef_carb

Original tag: ef_carb

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

The carbon footprint measures CO₂ emissions associated with fossil fuel use (burning fossil fuels and the embodied carbon in imported goods). The carbon footprint component is represented by the area of biologically productive land necessary for absorbing these carbon emissions. Currently, the carbon footprint is the largest portion of humanity's footprint. It is expressed in global hectares (gha) per person.

2.1.11.7 Carbon biocapacity per capita (ef_carb_bc)

Long tag: qog_ei_ef_carb_bc

Original tag: ef_carb_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The biosphere's ability to uptake CO₂, divided by the population size.

2.1.11.8 Carbon Footprint of production (gha per person) (ef_carbp)

Long tag: qog_ei_ef_carbp

Original tag: ef_carbp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The area needed to absorb all fossil fuel carbon emissions generated within the country, divided by the population size. The measurement units are global hectares (gha) per capita.

2.1.11.9 Cropland footprint of consumption (gha per person) (ef_crop)

Long tag: qog_ei_ef_crop

Original tag: ef_crop

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

Cropland is the most bioproductive of all the land-use types and consists of areas used to produce food and fibre for human consumption, feed for livestock, oil crops, and rubber. The cropland footprint includes crop products allocated to livestock and aquaculture feed mixes, and those used for fibres and materials. Due to lack of globally consistent data sets, current cropland footprint calculations do not yet take into account the extent to which farming techniques or unsustainable agricultural practices may cause long-term degradation of soil.

2.1.11.10 Cropland biocapacity per capita (ef_crop_bc)

Long tag: qog_ei_ef_crop_bc

Original tag: ef_crop_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The ability of a biosphere to produce crops (the total cropland area available, weighted by the productivity of this area), divided by the population size.

2.1.11.11 Cropland Footprint of production (gha per person) (ef_cropp)

Long tag: qog_ei_ef_cropp

Original tag: ef_cropp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The area within a country necessary for supporting the harvest of primary products on the cropland. The indicator is divided by the population size and is measured in global hectares (gha) per capita.

2.1.11.12 Ecological Footprint of Consumption Per Person (gha per person) (ef_ef)

Long tag: qog_ei_ef_ef

Original tag: ef_ef

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

Total ecological footprint of consumption divided by the population size. Measured in global hectares (gha) per person.

2.1.11.13 Ecological Footprint of Production Footprint (gha per person) (ef_efp)

Long tag: qog_ei_ef_efp

Original tag: ef_efp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

Total Ecological Footprint of production divided by the population size. The units are global hectares (gha) per capita.

2.1.11.14 Total Ecological Footprint of Consumption (total area) (ef_eft)

Long tag: qog_ei_ef_eft

Original tag: ef_eft

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The total Ecological Footprint of consumption is measured in global hectares (gha) and includes the area needed to produce the materials consumed and the area needed to absorb the carbon dioxide emissions. The consumption Footprint of a nation is calculated as a nation's primary production Footprint plus the Footprint of imports minus the Footprint of exports.

For example, if a country grows cotton for export, the ecological resources required are not included in that country's consumption Footprint. Rather, they are included in the consumption Footprint of the country that imports the T-shirts. However, these ecological resources are included in the exporting country's primary production Footprint.

2.1.11.15 Total Ecological Footprint of Production (total area) (ef_eftp)

Long tag: qog_ei_ef_eftp

Original tag: ef_eftp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

A nation's productive Footprint is the sum of the Footprints for all of the resources harvested and all of the waste generated within the defined geographical region. This includes all the area within a country necessary for supporting the actual harvest of primary products (cropland, pasture land, forestland, and fishing grounds), the country's built-up area (roads, factories, cities), and the area needed to absorb all fossil fuel carbon emissions generated within the country. If a country grows a crop for export, it is included in the ecological footprint of production of this country and the ecological footprint of consumption of the importing country. The indicator is measured in global hectares (gha).

2.1.11.16 Fish Footprint of consumption (gha per person) (ef_fg)

Long tag: qog_ei_ef_fg

Original tag: ef_fg

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

The fishing grounds footprint is calculated based on estimates of the maximum sustainable catch for a variety of fish species. These sustainable catch estimates are converted into an equivalent mass of primary production based on the various species' trophic levels. This estimate of maximum harvestable primary production is then divided amongst the continental shelf areas of the world. Fish caught and used in aquaculture feed mixes are included. Measured in global hectares (gha) per person.

2.1.11.17 Fishing ground biocapacity per capita (ef_fg_bc)

Long tag: qog_ei_ef_fg_bc

Original tag: ef_fg_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The ability of a biosphere to produce seafood (the amount of fishing grounds available, weighted by the productivity of fishing grounds). The measure is divided by the population size.

2.1.11.18 Fish Footprint of production (gha per person) (ef_fgp)

Long tag: qog_ei_ef_fgp

Original tag: ef_fgp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The area within a country necessary for supporting the harvest of primary products on fishing grounds. The indicator is divided by the population size and is measured in global hectares (gha) per capita.

2.1.11.19 Forest product Footprint of consumption (gha per person) (ef_for)

Long tag: qog_ei_ef_for

Original tag: ef_for

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

The forest product footprint is calculated based on the amount of lumber, pulp, timber products, and fuel wood consumed by a population on a yearly basis. Measured in global hectares (gha) per person.

2.1.11.20 Forest land biocapacity per capita (ef_for_bc)

Long tag: qog_ei_ef_for_bc

Original tag: ef_for_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The ability of a biosphere to produce timber products (the total forest area available, weighted by the productivity of this area), divided by the population size.

2.1.11.21 Forest product Footprint of production (gha per person) (ef_forp)

Long tag: qog_ei_ef_forp

Original tag: ef_forp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

Forest Footprint represents the area necessary to regenerate all the timber harvested (hence, depending on harvest rates, this area can be bigger or smaller than the forest area that exists within the country). The indicator is divided by the population size and measured in global hectares (gha) per person.

2.1.11.22 Grazing Footprint of consumption (gha per person) (ef_gl)

Long tag: qog_ei_ef_gl

Original tag: ef_gl

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019), Global Footprint Network (2023)

Description:

Grazing land is used to raise livestock for meat, dairy, hide, and wool products. The grazing land footprint is calculated by comparing the amount of livestock feed available in a country with the amount of feed required for all livestock in that year, with the remainder of feed demand assumed to come from grazing land. Measured in global hectares (gha) per person.

2.1.11.23 Grazing land biocapacity per capita (ef_gl_bc)

Long tag: qog_ei_ef_gl_bc

Original tag: ef_gl_bc

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The ability of a biosphere to produce pasture lands (the total pasture area available, weighted by the productivity/yield of these pastures), divided by the population size.

2.1.11.24 Grazing Footprint of production (gha per person) (ef_glp)

Long tag: qog_ei_ef_glp

Original tag: ef_glp

Dataset citation: Povitkina et al. (2021)

Variable citation: Global Footprint Network (2019)

Description:

The area within a country necessary for supporting the harvest of primary products on pastures. The indicator is divided by the population size and measured in global hectares (gha) per person.

2.1.12 Environmental Ministries

Dataset by: Michaël Aklin and Johannes Urpelainen Data on the establishment of environmental ministries from the article: Aklin, M. and Urpelainen, J., 2014. The global spread of environmental ministries: domestic/international interactions. *International Studies Quarterly*, 58(4), pp.764-780. Link to the original source: <https://academic.oup.com/isq/article/58/4/764/1815756?login=true>

2.1.12.1 Environmental ministry establishment (em_envmin)

Long tag: qog_ei_em_envmin

Original tag: em_envmin

Dataset citation: Povitkina et al. (2021)

Variable citation: Aklin & Urpelainen (2014)

Description:

Environmental ministry onset. The variable is coded "1" on the year when a national environmental ministry got established. For the rest of the years, the variable is coded "0". The authors expanded temporal and spatial coverage of the data initially published in the article:

Busch, P.O. and Jörgens, H., 2005. The international sources of policy convergence: explaining the spread of environmental policy innovations. *Journal of European public policy*, 12(5), pp.860-884.

2.1.13 Emergency Events Database

Dataset by: Centre for Research on the Epidemiology of Disasters EM-DAT is a global database on natural and technological disasters, containing essential core data on the occurrence and effects of more than 21,000 disasters in the world, from 1900 to present. EM-DAT is maintained by the Centre for Research on the Epidemiology of Disasters (CRED) at the School of Public Health of the Université catholique de Louvain located in Brussels, Belgium. The database is made up of

information from various sources, including UN agencies, non-governmental organizations, insurance companies, research institutes, and press agencies. Priority is given to data from UN agencies, governments, and the International Federation of Red Cross and Red Crescent Societies. This prioritization is not only a reflection of the quality or value of the data, it also reflects the fact that most reporting sources do not cover all disasters or have political limitations that could affect the figures. The entries are constantly reviewed for inconsistencies, redundancy, and incompleteness. CRED consolidates and updates data on a daily basis. A further check is made at monthly intervals, and revisions are made at the end of each calendar year. EM-DAT distinguishes between two generic categories for disasters: natural and technological. The natural disaster category is divided into 5 sub-groups - geophysical (e.g., earthquakes), meteorological (e.g., extreme temperature), hydrological (e.g., flood), climatological (e.g., drought), biological (e.g., epidemic), and extraterrestrial (e.g., asteroids). The 5 sub-groups in turn cover 15 disaster types and more than 30 sub-types. The technological disaster category is divided into 3 sub-groups - industrial, transport, and miscellaneous accidents, - which in turn cover 15 disaster types. For a disaster to be entered into the database at least one of the following criteria must be fulfilled: a) Ten (10) or more people reported killed; b) Hundred (100) or more people reported affected; c) Declaration of a state of emergency; d) Call for international assistance. Link to the original source: <https://www.emdat.be/>

2.1.13.1 Total damage from natural disasters in USD (emdat_damage)

Long tag: qog_ei_emdat_damage

Original tag: emdat_damage

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

The amount of damage to property, crops, and livestock from natural disasters. The value of estimated damage is given in thousands of US dollars. For each natural disaster, the registered number corresponds to the damage value at the moment of the event, i.e. the figures are shown true to the year of the event (do not include expenses that extended to the following years).

2.1.13.2 Number of people affected by natural disasters (emdat_naffected)

Long tag: qog_ei_emdat_naffected

Original tag: emdat_naffected

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

The number of people requiring immediate assistance during a period of emergency after a natural disasters, i.e. requiring basic survival needs such as food, water, shelter, sanitation, and immediate medical assistance.

2.1.13.3 Number of people killed by natural disasters (emdat_ndeath)

Long tag: qog_ei_emdat_ndeath

Original tag: emdat_ndeath

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

The number of people who lost their lives because the natural hazard happened and people whose whereabouts since the natural disaster is unknown, and who are presumed dead (official figure when available).

2.1.13.4 Number of natural disasters (emdat_ndis)

Long tag: qog_ei_emdat_ndis

Original tag: emdat_ndis

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

Total number of natural disasters occurring per country per year. Natural disasters that last more than one year or begin at the end of the year and last into the next are counted at the year of their first occurrence.

2.1.13.5 Number of homeless people after natural disaster (emdat_nhome)

Long tag: qog_ei_emdat_nhome

Original tag: emdat_nhome

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

The number of people whose house is destroyed or heavily damaged and therefore need shelter after a natural disaster.

2.1.13.6 Number of people injured in natural disasters (emdat_ninj)

Long tag: qog_ei_emdat_ninj

Original tag: emdat_ninj

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

The number of people suffering from physical injuries, trauma or an illness requiring immediate medical assistance as a direct result of a natural disaster.

2.1.13.7 Number of affected (total) by natural disasters (emdat_ntotaff)

Long tag: qog_ei_emdat_ntotaff

Original tag: emdat_ntotaff

Dataset citation: Povitkina et al. (2021)

Variable citation: Guha-Sapir (2020)

Description:

Sum of people injured, homeless, and affected as a result of natural disasters.

2.1.14 Environmental Non-Governmental Organizations

Dataset by: Thomas Bernauer, Tobias Böhmelt, and Vally Koubi Data on environmental non-governmental organizations used in the article: Bernauer, T., Böhmelt, T. and Koubi, V., 2013. Is there a democracy/civil society paradox in global environmental governance? *Global Environmental Politics*, 13(1), pp.88-107. Link to the original source: <https://ib.ethz.ch/data/civilsoc.html>

2.1.14.1 Number of national ENGOs (engo_nengo)

Long tag: qog_ei_engo_nengo

Original tag: engo_nengo

Dataset citation: Povitkina et al. (2021)

Variable citation: Bernauer et al. (2013)

Description:

National environmental non-governmental organizations (ENGOs) registered in a country.

The data on registered national ENGOs comes from the archives of the International Union for Conservation of Nature (IUCN) for the time period 1973-2006 from 181 countries. While the IUCN covers most countries, it is an umbrella organization where membership is not mandatory and ENGOs

do not have to register. As a result, some ENGOs that have not registered with the IUCN may have been omitted. Therefore the variable becomes a proxy for the political leverage of ENGOs.

2.1.15 ENVIPOLCON

Dataset by: Holzinger, Knill, Sommerer ENVIPOLCON is the acronym of "Environmental governance in Europe: the impact of international institutions and trade on policy convergence". The project was carried out between 2003 and 2006 by the University of Konstanz, University of Hamburg, Germany, Free University of Berlin, University of Salzburg, and Radboud University Nijmegen. The project was supported by the EU, RTD programme "Improving the human research potential and the socioeconomic knowledge base", contract no. HPSE-CT-2002-00103. This compilation only includes data on policy instrument adoption from ENVIPOLCON. Each of the instrument variables is coded with scores ranging from 1= obligatory standard to 10 = voluntary instrument. 0 = no instrument because no policy was in place yet. For the variable on the promotion of renewable energy (e.g. ener_i7) the additional instrument "legal obligation to purchase that electricity" was coded as = 11. Other variables from ENVIPOLCON are included into the extension of the dataset - ENVIPOLCONCHANGE, which is also a part of this compilation. 2.1.15.1 Policy instruments for quality of bathing water (epc_bath)

Long tag: qog_ei_epc_bath

Original tag: epc_bath

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on quality of bathing water. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'

2.1.15.2 Policy instruments for exhaust emissions from cars (epc_car)

Long tag: qog_ei_epc_car

Original tag: epc_car

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on exhaust emissions from cars. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'

- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.3 Policy instruments for reduction of CO2 emissions from heavy industry (epc_co2)

Long tag: qog_ei_epc_co2

Original tag: epc_co2

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on reduction of CO2 emissions from heavy industry. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.4 Policy instruments for hazardous substances in detergents (epc_dete)

Long tag: qog_ei_epc_dete

Original tag: epc_dete

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on hazardous substances in detergents. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.5 Policy instruments for energy efficiency of refrigerators (epc_enef)

Long tag: qog_ei_epc_enef

Original tag: epc_enef

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on energy efficiency of refrigerators. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.6 Policy instruments for electricity from renewable sources (epc_ener)

Long tag: qog_ei_epc_ener

Original tag: epc_ener

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on electricity production from renewable sources. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'
- 11 = 'Extra instrument for energy'.

2.1.15.7 Policy instruments for forest protection policy (epc_fors)

Long tag: qog_ei_epc_fors

Original tag: epc_fors

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on forest protection. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.8 Policy instruments for lead emissions from vehicles (epc_lead)

Long tag: qog_ei_epc_lead

Original tag: epc_lead

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on lead emissions from vehicles. The variable measure the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.9 Policy instruments for noise emissions from lorries (epc_nois)

Long tag: qog_ei_epc_nois

Original tag: epc_nois

Dataset citation: Povitkina et al. (2021)

Variable citation: Heichel et al. (2008)

Description:

Policy instruments on noise emission from lorries. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.10 Policy instruments to promote refillable beverage containers (epc_pawa)*Long tag:* qog_ei_epc_pawa*Original tag:* epc_pawa*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Heichel et al. (2008)*Description:*

Policy instruments to promote refillable beverage containers. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.11 Policy instruments for contaminated sites (epc_soil)*Long tag:* qog_ei_epc_soil*Original tag:* epc_soil*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Heichel et al. (2008)*Description:*

Policy instruments on contaminated sites. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.15.12 Policy instruments for water protection related to industrial discharges (epc_watp)*Long tag:* qog_ei_epc_watp*Original tag:* epc_watp*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Heichel et al. (2008)*Description:*

Policy instruments on industrial discharges into water bodies. The variable measures the presence of a policy instrument in 1970, 1980, 1990, and 2000.

Variable coding:

- 0 = 'No policy'
- 1 = 'Obligatory standard, prohibition or ban'
- 2 = 'Technological prescription'
- 3 = 'Tax or levy'
- 4 = 'Subsidy or tax reduction'
- 5 = 'Liability scheme(s)'
- 6 = 'Planning instrument'
- 7 = 'Public investment'
- 8 = 'Data collection / monitoring programme(s)'
- 9 = 'Information based instrument'
- 10 = 'Voluntary instrument'.

2.1.16 ENVIPOLCONCHANGE

Dataset by: Holzinger, Knill, Sommerer The Dataset "ENVIPOLCONCHANGE (Environmental Policy Change). A dataset on environmental regulations in 24 OECD countries from 1970 to 2005" has been collected by the ENVIPOLCON group at the University of Konstanz (Stephan Heichel, Katharina Holzinger, Christoph Knill, Thomas Sommerer) in 2009. Data collection was funded by the German Research Foundation DFG. Link to the original source: <https://www.polver.uni-konstanz.de/holzinger/research/researchprojects/policy-wandel-in-der-umweltpolitik-der-einfluss-von-nationalen-vetospielernund-transnationalem-p-der-datensatz-environmental-policy-change-envipolchange/>

2.1.16.1 Change in eco audit policy (epcc_audi_ch2)

Long tag: qog_ei_epcc_audi_ch2

Original tag: epcc_audi_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for eco-audit in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.2 Eco audit policy introduction (epcc_audi_in2)

Long tag: qog_ei_epcc_audi_in2

Original tag: epcc_audi_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for eco-audit. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.3 Change in coliforms in bathing water policy (epcc_bath_ch2)

Long tag: qog_ei_epcc_bath_ch2

Original tag: epcc_bath_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for the quality of bathing water in the recorded year. This is a binary variable, where "1" is assigned

to the year when there was a change in the policy, including its first introduction, and "0"; is assigned to all other years.

2.1.16.4 Coliforms in bathing water policy introduction (epcc_bath_in2)

Long tag: qog_ei_epcc_bath_in2

Original tag: epcc_bath_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for quality of bathing water. This is a binary variable, where "1"; is assigned to the year when the policy was first introduced and "0"; is assigned to all other years.

2.1.16.5 Passenger car emissions CO regulatory level (epcc_car_co)

Long tag: qog_ei_epcc_car_co

Original tag: epcc_car_co

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for CO emissions in g/km, adjusted.

2.1.16.6 Passenger car emissions HC regulatory level (epcc_car_hc)

Long tag: qog_ei_epcc_car_hc

Original tag: epcc_car_hc

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for HC emissions in g/km, adjusted.

2.1.16.7 Passenger car emissions NOx regulatory level (epcc_car_nox)

Long tag: qog_ei_epcc_car_nox

Original tag: epcc_car_nox

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for NOx emissions in g/km, adjusted.

2.1.16.8 Change in passenger car emissions policy (epcc_care_ch2)

Long tag: qog_ei_epcc_care_ch2

Original tag: epcc_care_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for exhaust emissions from cars in the recorded year. This is a binary variable, where "1"; is assigned to the year when there was a change in the policy, including its first introduction, and "0"; is assigned to all other years.

2.1.16.9 Passenger car emissions policy introduction (epcc_care_in2)

Long tag: qog_ei_epcc_care_in2

Original tag: epcc_care_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for exhaust emissions from cars. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.10 Sum of downward changes in all 17 standards (epcc_cd_dwsum)

Long tag: qog_ei_epcc_cd_dwsum

Original tag: epcc_cd_dwsum

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Sum of downward changes in all 17 variables that measure standards/regulatory levels in the recorded year. Higher score, on average, corresponds to a decrease in policy standards.

2.1.16.11 Sum of upward changes in all 17 standards (epcc_cd_upsum)

Long tag: qog_ei_epcc_cd_upsum

Original tag: epcc_cd_upsum

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Sum of all upward changes in the 17 variables that measure standards/regulatory levels included in this dataset in the recorded year. Higher score corresponds to, on average, increased policy standards.

2.1.16.12 Cumulative sum of all policy-in-place items (epcc_ch_kum)

Long tag: qog_ei_epcc_ch_kum

Original tag: epcc_ch_kum

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Cumulative sum of all Policy-in-Place variables. Higher score corresponds to a higher number of policies in place.

2.1.16.13 Sum of all changes in policy (epcc_ch2)

Long tag: qog_ei_epcc_ch2

Original tag: epcc_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Sum of all changes in policies, including introductions, in the recorded year.

2.1.16.14 Change in contaminated sites policy (epcc_cont_ch2)

Long tag: qog_ei_epcc_cont_ch2

Original tag: epcc_cont_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for contaminated sites in the

recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.15 Contaminated sites policy introduction (epcc_cont_in2)

Long tag: qog_ei_epcc_cont_in2

Original tag: epcc_cont_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for contaminated sites. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.16 Change in recycling of construction waste policy (epcc_cowa_ch2)

Long tag: qog_ei_epcc_cowa_ch2

Original tag: epcc_cowa_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for recycling construction waste in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.17 Recycling of construction waste policy introduction (epcc_cowa_in2)

Long tag: qog_ei_epcc_cowa_in2

Original tag: epcc_cowa_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for recycling of construction waste. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.18 Change in detergents regulation policy (epcc_dete_ch2)

Long tag: qog_ei_epcc_dete_ch2

Original tag: epcc_dete_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for hazardous substances in detergents in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.19 Detergents regulation policy introduction (epcc_dete_in2)

Long tag: qog_ei_epcc_dete_in2

Original tag: epcc_dete_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for hazardous substances in detergents. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.20 Change in ecolabel policy (epcc_ecol_ch2)

Long tag: qog_ei_epcc_ecol_ch2

Original tag: epcc_ecol_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for eco-labelling in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.21 Ecolabel policy introduction (epcc_ecol_in2)

Long tag: qog_ei_epcc_ecol_in2

Original tag: epcc_ecol_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for eco-labeling. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.22 Change in environmental impact assessment (epcc_eias_ch2)

Long tag: qog_ei_epcc_eias_ch2

Original tag: epcc_eias_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for environmental impact assessment in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.23 Environmental impact assessment introduction (epcc_eias_in2)

Long tag: qog_ei_epcc_eias_in2

Original tag: epcc_eias_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for environmental impact assessment. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.24 Change in energy efficiency of refrigerators policy (epcc_enef_ch2)

Long tag: qog_ei_epcc_enef_ch2

Original tag: epcc_enef_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for the energy efficiency of refrigerators in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.25 Energy efficiency of refrigerators policy introduction (epcc_enef_in2)

Long tag: qog_ei_epcc_enef_in2

Original tag: epcc_enef_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for energy efficiency of refrigerators. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.26 Change in glass recycling target in regulation (epcc_glas_ch2)

Long tag: qog_ei_epcc_glas_ch2

Original tag: epcc_glas_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for glass reuse/recycling target in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.27 Glass recycling target in regulation introduction (epcc_glas_in2)

Long tag: qog_ei_epcc_glas_in2

Original tag: epcc_glas_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for glass reuse/recycling target. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.28 Glass recycling target in regulations, percent (epcc_glas2_s)

Long tag: qog_ei_epcc_glas2_s

Original tag: epcc_glas2_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Glass reuse/recycling target in percent of total waste generated.

2.1.16.29 Sum of first policy introductions (epcc_intro_kum)

Long tag: qog_ei_epcc_intro_kum

Original tag: epcc_intro_kum

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Sum of all variables measuring the first introduction of a policy. Higher number corresponds to a higher number of policies being adopted in the recorded year.

2.1.16.30 Change in landfill target in regulations (epcc_land_ch2)

Long tag: qog_ei_epcc_land_ch2

Original tag: epcc_land_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for waste landfill target in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.31 Landfill target in regulations introduction (epcc_lanr_in2)

Long tag: qog_ei_epcc_lanr_in2

Original tag: epcc_lanr_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for waste landfill target. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.32 Large combustion plants regulatory level DUST (epcc_lcp_dust)

Long tag: qog_ei_epcc_lcp_dust

Original tag: epcc_lcp_dust

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for dust from large combustion plants in mg/m³.

2.1.16.33 Large combustion plants regulatory level NOX (epcc_lcp_nox)

Long tag: qog_ei_epcc_lcp_nox

Original tag: epcc_lcp_nox

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for NO_x emissions from large combustion plants in mg/m³.

2.1.16.34 Large combustion plants regulatory level SO2 (epcc_lcp_so2)

Long tag: qog_ei_epcc_lcp_so2

Original tag: epcc_lcp_so2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for SO₂ emissions from large combustion plants in mg/m³.

2.1.16.35 Change in large combustion plants policy (epcc_lcpt_ch2)

Long tag: qog_ei_epcc_lcpt_ch2

Original tag: epcc_lcpt_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for airborne emissions from large combustion plants in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.36 Large combustion plants policy introduction (epcc_lcpt_in2)

Long tag: qog_ei_epcc_lcpt_in2

Original tag: epcc_lcpt_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for airborne emissions from large combustion plants. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.37 Change lead content in petrol policy (epcc_lead_ch2)

Long tag: qog_ei_epcc_lead_ch2

Original tag: epcc_lead_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for lead emissions from vehicles in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.38 Lead content in petrol policy introduction (epcc_lead_in2)

Long tag: qog_ei_epcc_lead_in2

Original tag: epcc_lead_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for lead emissions from vehicles. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.39 Lead content in petrol regulatory level (epcc_lead_s)

Long tag: qog_ei_epcc_lead_s

Original tag: epcc_lead_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for lead content in petrol in g/l.

2.1.16.40 Change in motorway noise emissions policy (epcc_moto_ch2)

Long tag: qog_ei_epcc_moto_ch2

Original tag: epcc_moto_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for noise level around motorways in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.41 Motorway noise emissions policy introduction (epcc_moto_in2)

Long tag: qog_ei_epcc_moto_in2

Original tag: epcc_moto_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for noise level around motorways. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.42 Motorway noise emissions regulatory level (epcc_moto_s)

Long tag: qog_ei_epcc_moto_s

Original tag: epcc_moto_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Motorway noise emissions standard in decibel (dB (A)).

2.1.16.43 Change in noise emissions from lorries policy (epcc_nois_ch2)

Long tag: qog_ei_epcc_nois_ch2

Original tag: epcc_nois_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for noise emissions from lorries in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.44 Noise emissions from lorries policy introduction (epcc_nois_in2)

Long tag: qog_ei_epcc_nois_in2

Original tag: epcc_nois_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for noise emissions from lorries. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.45 Noise emissions from lorries regulatory level (epcc_nois_s)

Long tag: qog_ei_epcc_nois_s

Original tag: epcc_nois_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Noise emissions standard from lorries in decibel (dB(a)).

2.1.16.46 Change in packaging waste recycling target (epcc_pact_ch2)

Long tag: qog_ei_epcc_pact_ch2

Original tag: epcc_pact_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for waste packaging target in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.47 Packaging waste recycling target introduction (epcc_pact_in2)

Long tag: qog_ei_epcc_pact_in2

Original tag: epcc_pact_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for waste packaging target. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.48 Change in paper recycling target in regulation (epcc_pape_ch2)

Long tag: qog_ei_epcc_pape_ch2

Original tag: epcc_pape_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for waste paper reuse/recycling target in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.49 Paper recycling target in regulation introduction (epcc_pape_in2)

Long tag: qog_ei_epcc_pape_in2

Original tag: epcc_pape_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for waste paper reuse/recycling target. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.50 Paper recycling target in regulations, percent (epcc_pape2_s)

Long tag: qog_ei_epcc_pape2_s

Original tag: epcc_pape2_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

Waste paper reuse/recycling target in percent of waste generated.

2.1.16.51 Change in soil policy (epcc_soil_ch2)

Long tag: qog_ei_epcc_soil_ch2

Original tag: epcc_soil_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the soil policy in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.52 Soil policy introduction (epcc_soil_in2)

Long tag: qog_ei_epcc_soil_in2

Original tag: epcc_soil_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the soil policy. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.53 Change in sulphur content gas oil policy (epcc_sulp_ch2)

Long tag: qog_ei_epcc_sulp_ch2

Original tag: epcc_sulp_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for sulphur content in gas oil in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.54 Sulphur content gas oil policy introduction (epcc_sulp_in2)

Long tag: qog_ei_epcc_sulp_in2

Original tag: epcc_sulp_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for sulphur content in gas oil. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.55 Sulphur content in gas oil regulatory level (epcc_sulp_s)

Long tag: qog_ei_epcc_sulp_s

Original tag: epcc_sulp_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for sulphur content in gas oil, as percent per weight.

2.1.16.56 Change in National environmental policy/Sustainable development plan (epcc_susp_ch2)

Long tag: qog_ei_epcc_susp_ch2

Original tag: epcc_susp_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for the national environmental policy or sustainable development plan in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.57 National environmental policy/Sustainable development plan introduction (epcc_susp_in2)

Long tag: qog_ei_epcc_susp_in2

Original tag: epcc_susp_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable expresses the first introduction of the policy for the national environmental policy or sustainable development plan. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.58 Water protection - BOD in industrial discharges (epcc_wabo_s)

Long tag: qog_ei_epcc_wabo_s

Original tag: epcc_wabo_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for biochemical oxygen demand (BOD) in industrial discharges in mg/l.

2.1.16.59 Water protection - Copper in industrial discharges (epcc_waco_s)

Long tag: qog_ei_epcc_waco_s

Original tag: epcc_waco_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for Copper in industrial discharges in mg/l.

2.1.16.60 Water protection - Chromium in industrial discharges (epcc_wacr_s)

Long tag: qog_ei_epcc_wacr_s

Original tag: epcc_wacr_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for Chromium in industrial discharges in mg/l.

2.1.16.61 Change in efficient use of water in industry policy (epcc_waef_ch2)

Long tag: qog_ei_epcc_waef_ch2

Original tag: epcc_waef_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for efficient use of the water industry in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.62 Efficient use of water in industry policy introduction (epcc_waef_in2)

Long tag: qog_ei_epcc_waef_in2

Original tag: epcc_waef_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for efficient use of the water industry. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.63 Water protection - Lead in industrial discharges (epcc_wale_s)

Long tag: qog_ei_epcc_wale_s

Original tag: epcc_wale_s

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

A limit value for Lead in industrial discharges in mg/l.

2.1.16.64 Change in water protection policy - industrial discharges (epcc_wapr_ch2)

Long tag: qog_ei_epcc_wapr_ch2

Original tag: epcc_wapr_ch2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures whether there was a change in the policy for water protection in industrial discharges in the recorded year. This is a binary variable, where "1" is assigned to the year when there was a change in the policy, including its first introduction, and "0" is assigned to all other years.

2.1.16.65 Water protection - industrial discharges introduction (epcc_wapr_in2)

Long tag: qog_ei_epcc_wapr_in2

Original tag: epcc_wapr_in2

Dataset citation: Povitkina et al. (2021)

Variable citation: Holzinger et al. (2011)

Description:

The variable measures the first introduction of the policy for water protection in industrial discharges. This is a binary variable, where "1" is assigned to the year when the policy was first introduced and "0" is assigned to all other years.

2.1.16.66 Water protection - Zinc in industrial discharges (epcc_wazi_s)*Long tag:* qog_ei_epcc_wazi_s*Original tag:* epcc_wazi_s*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Holzinger et al. (2011)*Description:*

A limit value for Zinc in industrial discharges in mg/l.

2.1.17 Environmental Performance Index Data 2020

Dataset by: Environmental Performance Index The Environmental Performance Index provides a ranking that shines light on how each country manages environmental issues. The Environmental Performance Index (EPI) ranks how well countries perform on high-priority environmental issues in two broad policy areas: protection of human health from environmental harm and protection of ecosystems. Within these two policy objectives the EPI scores country performance in 11 issue areas comprised of 32 indicators. Indicators in the EPI measure how close countries are to meeting internationally established targets or, in the absence of agreed-upon targets, how they compare to the range of observed countries. Note: In many cases the EPI variables lack actual observations and rely on imputation. Please refer to the original documentation on more information about this. Also, some values (usually the value 0) are very unlikely, please use your judgement whether to treat these as the value 0 or as "Data missing". The values on the EPI, Policy Objectives, and Issue Categories are not comparable over time, therefore, this compilation only includes data on these variables from the latest release. The raw data on the 32 indicators, however, are comparable over time and, therefore, time-series are included. Link to the original source: <https://epi.envirocenter.yale.edu/epi-downloads>

2.1.17.1 Agriculture Issue Category (epi_agr)*Long tag:* qog_ei_epi_agr*Original tag:* epi_agr*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Wendling et al. (2020), Wolf et al. (2022)*Description:*

Agriculture Issue Category consists of the Sustainable Nitrogen Management Index, which measures the Euclidean distance from an ideal point with optimal nitrogen use efficiency (NUE) and crop yield. The issue category varies from 0 to 100.

2.1.17.2 Air Quality Issue Category (epi_air)*Long tag:* qog_ei_epi_air*Original tag:* epi_air*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Wendling et al. (2020), Wolf et al. (2022)*Description:*

Air Quality Issue Category consists of three indicators:

1) Household air pollution (HAP), measured with the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons due to the health risk posed by the incomplete combustion of solid fuels. It is log-transformed and given 40percent weight in the aggregation.

2) Ambient particulate matter pollution, measured as the PM2.5 exposure using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to fine air particulate matter smaller than 2.5 micrometers (PM2.5). It is log-transformed and given 55percent weight in the aggregation.

3) Ozone exposure, measured by the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to ground-level ozone pollution. It is log-transformed and given 5percent weight in the aggregation.

The issue category varies from 0 to 100.

2.1.17.3 Pollution Emissions Issue Category (epi_ape)

Long tag: qog_ei_epi_ape

Original tag: epi_ape

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Pollution Emissions Issue Category consists of 2 indicators:

1) The SO₂ growth rate, calculated as the average annual rate of increase or decrease in SO₂ over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. First, the EPI team calculates Spearman's correlation coefficient between SO₂ emissions and GDP over a ten-year period. Second, they regress logged SO₂ emissions over ten years to find a slope. Third, they calculate an unadjusted average annual growth rate in SO₂ emissions. Fourth, they adjust the negative growth rates by a factor of 1 - the correlation coefficient.

2) The NO_x growth rate, calculated as the average annual rate of increase or decrease in NO_x over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. First, the EPI team calculates Spearman's correlation coefficient between NO_x emissions and GDP over a ten-year period. Second, they regress logged NO_x emissions over ten years to find a slope. Third, they calculate an unadjusted average annual growth rate in NO_x emissions. Fourth, they adjust the negative growth rates by a factor of 1 - the correlation coefficient.

Both indicators are given equal weight in the aggregation. The issue category varies from 0 to 100.

2.1.17.4 Black carbon growth rate (epi_bca)

Long tag: qog_ei_epi_bca

Original tag: epi_bca

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The black carbon growth rate, which makes up 5percent of the Climate Change Issue Category, is calculated as the average annual rate of increase or decrease in black carbon over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Community Emissions Data Systems.

When using this variable, please cite both EPI and the original source.

2.1.17.5 Biodiversity and Habitat Issue Category (epi_bdh)

Long tag: qog_ei_epi_bdh

Original tag: epi_bdh

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Biodiversity and Habitat Issue Category consists of 7 indicators:

1) The terrestrial biome protection (national weights) indicator. It is calculated by first taking proportions of the area of each of a country's biome types that are covered by protected areas and then constructing a weighted sum of the protection percentages for all biomes within that country. The protection percentages are weighted according to the prevalence of each biome type within that country. This indicator evaluates a country's efforts to achieve 17percent protection for all biomes within its borders, as per Aichi Target 11. It is given 20percent weight in the aggregation.

2) The terrestrial biome protection (global weights) indicator, where protection percentages are weighted according to the global prevalence of each biome type. This indicator evaluates a country's contribution toward the global 17percent protection goal. It is given 20percent weight in the aggregation.

3) The marine protected areas indicator, measured as a percentage of a country's total exclusive economic zone (EEZ) designated as marine protected areas (MPAs). Because each country may have multiple EEZs, the summed area of MPAs is divided by the summed EEZ. It is given 20percent weight in the aggregation.

4) The Protected Areas Representativeness Index (PARI), which measures ecological representativeness as the proportion of biologically scaled environmental diversity included in a country's terrestrial protected areas. The measure relies on remote sensing, biodiversity informatics, and global modeling of fine-scaled variation in biodiversity composition for plant, vertebrate, and invertebrate species. It is given 10percent weight in the aggregation.

5) Species Habitat Index (SHI) estimates potential population losses, as well as regional and global extinction risks of individual species, using habitat loss as a proxy. The SHI indicator measures the proportion of suitable habitat within a country that remains intact for each species in that country relative to a baseline set in the year 2001. It is given 10percent weight in the aggregation.

6) Species Protection Index (SPI) evaluates the species-level ecological representativeness of each country's protected area network. The SPI metric uses remote sensing data, global biodiversity informatics, and integrative models to map suitable habitat for over 30,000 terrestrial vertebrate, invertebrate, and plant species at high resolutions. It is given 10percent weight in the aggregation.

7) The Biodiversity Habitat Index (BHI), which estimates the effects of habitat loss, degradation, and fragmentation on the expected retention of terrestrial biodiversity. It is given 10percent weight in the aggregation.

The issue category varies from 0 to 100.

2.1.17.6 Biodiversity habitat index (epi_bhv)

Long tag: qog_ei_epi_bhv

Original tag: epi_bhv

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Biodiversity Habitat Index (BHI) estimates the effects of habitat loss, degradation, and fragmentation on the expected retention of terrestrial biodiversity.

Original source: Commonwealth Scientific and Industrial Research Organization.

When using this variable, please cite both EPI and the original source.

2.1.17.7 Climate Change Issue Category (epi_cch)

Long tag: qog_ei_epi_cch

Original tag: epi_cch

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Climate Change Issue Category consists of 8 indicators:

1) The CO₂ growth rate, calculated as the average annual rate of increase or decrease in raw carbon dioxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 55percent weight in the aggregation.

2) The CH₄ growth rate, calculated as the average annual rate of increase or decrease in raw methane emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 15percent weight in the aggregation.

3) The F-gas growth rate, calculated as the average annual rate of increase or decrease in raw fluorinated gas emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 10percent weight in the aggregation.

4) The N₂O growth rate, calculated as the average annual rate of increase or decrease in raw nitrous oxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 5percent weight in the aggregation.

5) The black carbon growth rate, calculated as the average annual rate of increase or decrease in black carbon over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation. It is given 5percent weight in the aggregation.

6) Greenhouse gas (GHG) emissions per capita in the year 2017. First, the EPI team calculates total greenhouse gas emissions, applying Global Warming Potentials to convert all units to Gg of CO₂-equivalents. Second, they calculate GHG emissions per capita (GHP) as the GHG emissions divided by population (POP). It is log-transformed and given 2.5percent weight in the aggregation.

7) CO₂ emissions from land cover change, calculated over the years 2001-2015. First, the EPI team regresses logged CO₂ emissions from land cover change (LULC) over 15 years to find a slope. Then, they calculate an unadjusted average annual growth rate in these CO₂ emissions. It is given 2.5percent weight in the aggregation.

8) The greenhouse gas (GHG) intensity growth rate indicator, which serves as a signal of countries' progress in decoupling emissions from economic growth. The EPI team calculates an annual average growth rate in GHG emissions per unit of GDP over the years 2008-2017. This indicator highlights the need for action on climate change mitigation in countries at all income levels. It is given 5percent weight in the aggregation.

The issue category varies from 0 to 100.

2.1.17.8 CO₂ growth rate (epi_cda)

Long tag: qog_ei_epi_cda

Original tag: epi_cda

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The CO₂ (carbon dioxide) growth rate, which makes up 55percent of the Climate Change Issue Category, is calculated as the average annual rate of increase or decrease in raw carbon dioxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.9 CH₄ growth rate (epi_cha)

Long tag: qog_ei_epi_cha

Original tag: epi_cha

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The CH₄ (methane) growth rate, which makes up 15percent of the Climate Change Issue Category, is calculated as the average annual rate of increase or decrease in raw methane emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.10 Ecosystem Services Issue Category (epi_ecs)

Long tag: qog_ei_epi_ecs

Original tag: epi_ecs

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Ecosystem Services Issue Category consists of 3 indicators:

1) Tree cover loss, measured as a five-year moving average of the percentage of forest lost from the extent of forest cover in the reference year 2000. They define a forest as any land area with over 30percent canopy cover. It is log-transformed, $\ln(x + 1)$, = 9.70E-07, and given 90percent weight in the aggregation.

2) Grassland loss, measured as a five-year moving average of percentage of gross losses in grassland areas compared to the 1992 reference year. It is log-transformed, $\ln(x + 1)$, = 4.45E-06, and given 5percent weight in the aggregation.

3) Wetland loss, measured as a five-year moving average of percentage of gross losses in wetland areas compared to the 1992 reference year. It is log-transformed, $\ln(x + 1)$, = 2.47E-06, and given 5percent weight in the aggregation.

The issue category varies from 0 to 100.

2.1.17.11 Environmental Health Policy Objective (epi_eh)

Long tag: qog_ei_epi_eh

Original tag: epi_eh

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Environmental Health Policy Objective measures how well countries are protecting their populations from environmental health risks. It comprises 40percent of the total EPI score and consists of 4 issue categories: Air Quality (50percent), Sanitation and Drinking Water (40percent), Heavy Metals (5percent), and Waste Management (5percent). The policy objective varies from 0 to 100.

2.1.17.12 Environmental Performance Index (epi_epi)

Long tag: qog_ei_epi_epi

Original tag: epi_epi

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

The 2020 Environmental Performance Index (EPI) scores 180 countries on 32 performance indicators across 11 issue categories related to environmental health and ecosystem vitality. The 2020 EPI is a composite index. The EPI researchers begin by gathering data on 32 individual metrics of environmental performance. These metrics are aggregated into a hierarchy beginning with 11 issue categories: Air Quality, Sanitation and Drinking Water, Heavy Metals, Waste Management, Biodiversity and Habitat, Ecosystem Services, Fisheries, Climate Change, Pollution Emissions, Water Resources, and Agriculture.

These issue categories are then combined into 2 policy objectives, Environmental Health and Ecosystem Vitality, and then finally consolidated into the overall EPI. To allow for meaningful comparisons, before aggregation the EPI researchers construct scores for each of the 32 indicators, placing them onto a common scale where 0 indicates worst performance and 100 indicates best performance. How far a country is from achieving international targets of sustainability determines its placement on this scale.

Note: The EPI scores are not comparable over time, therefore, this dataset only includes the EPI scores from the latest release.

2.1.17.13 Ecosystem Vitality Policy Objective (epi_ev)

Long tag: qog_ei_epi_ev

Original tag: epi_ev

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Ecosystem Vitality Policy Objective measures how well countries are preserving, protecting, and enhancing ecosystems and the services they provide. It comprises 60percent of the total EPI score and consists of 7 issue categories: Biodiversity and Habitat (25percent), Ecosystem Services (10percent), Fisheries (10percent), Climate Change (40percent), Pollution Emissions (5percent), Agriculture (5percent), and Water Resources (5percent). The policy objective varies from 0 to 100.

2.1.17.14 Fish caught by trawling (epi_fct)

Long tag: qog_ei_epi_fct

Original tag: epi_fct

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Fish caught by trawling measures the percentage of a country's fish caught by bottom or pelagic trawling, where a fishing net is pulled through the water behind a boat. This practice

is indiscriminate and wasteful and can severely damage marine ecosystems. The variable is log-transformed according to the formula $\ln(x+)$, where $= 8.40E-08$.

Original source: Sea Around Us.

When using this variable, please cite both EPI and the original source.

2.1.17.15 F-gas growth rate (epi_fga)

Long tag: qog_ei_epi_fga

Original tag: epi_fga

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The F-gas growth rate, which makes up 10percent of the Climate Change Issue Category, is calculated as the average annual rate of increase or decrease in raw fluorinated gas emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.16 Fisheries Issue Category (epi_fsh)

Long tag: qog_ei_epi_fsh

Original tag: epi_fsh

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Fisheries Issue Category consists of 3 indicators:

1) Fish stock status, measured as the percentage of a country's total catch that comes from overexploited or collapsed stocks, considering all fish stocks within a country's EEZs. Because continued and increased stock exploitation leads to smaller catches, this indicator sheds light on the impact of a country's fishing practices. The metric is calculated as an average percentage weighted by catch and summed across classes of concern. It is log-transformed, $\ln(x +)$, $= 1.13E-05$, and given 35percent weight in the aggregation.

2) Marine Trophic Index (MTI), which measures the health of a country's fishing stock based on expected catch and changes over time. The MTI describes the degree to which a country is depleting species at higher trophic levels and "fishing down the food web." It is log-transformed, $\ln(x +)$, $= 9.51E-07$, and given 35percent weight in the aggregation.

3) Fish caught by trawling, measured as the percentage of a country's fish caught by bottom or pelagic trawling, where a fishing net is pulled through the water behind a boat. It is log-transformed, $\ln(x +)$, $= 8.40E-08$, and given 30percent weight in the aggregation.

The issue category varies from 0 to 100.

2.1.17.17 Fish stock status (epi_fss)

Long tag: qog_ei_epi_fss

Original tag: epi_fss

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Fish stock status measures the percentage of a country's total catch that comes from overexploited or collapsed stocks, considering all fish stocks within a country's EEZs. Because continued and increased stock exploitation leads to smaller catches, this indicator sheds light on the impact of a country's fishing practices. The variable is log-transformed according to the formula $\ln(x+)$, where $= 1.13E-05$.

Original source: Sea Around Us.

When using this variable, please cite both EPI and the original source.

2.1.17.18 GHG emissions per capita (epi_ghp)

Long tag: qog_ei_epi_ghp

Original tag: epi_ghp

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI calculates greenhouse gas (GHG) emissions per capita for each country in the year 2017. The variable is log-transformed. The unit of measurement is gigagrams (Gg) of CO₂-equivalent per person.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.19 GHG intensity trend (epi_gib)

Long tag: qog_ei_epi_gib

Original tag: epi_gib

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The greenhouse gas (GHG) intensity growth rate indicator serves as a signal of countries' progress in decoupling emissions from economic growth. EPI calculates an annual average growth rate in GHG emissions per unit of GDP over the years 2008-2017. This indicator highlights the need for action on climate change mitigation in countries at all income levels.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.20 Grassland loss (epi_grl)

Long tag: qog_ei_epi_grl

Original tag: epi_grl

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Grassland loss is measured using a five-year moving average of percentage of gross losses in grassland areas compared to the 1992 reference year. The variable is log-transformed according to the formula $\ln(x+)$, where $= 4.45E-06$.

Original source: European Space Agency.

When using this variable, please cite both EPI and the original source.

2.1.17.21 Sanitation and Drinking Water Issue Category (epi_h2o)

Long tag: qog_ei_epi_h2o

Original tag: epi_h2o

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Sanitation and Drinking Water Issue Category consists of two indicators:

1) Unsafe sanitation, measured as the proportion of a country's population exposed to health risks from their access to sanitation, defined by the primary toilet type used by households. It is log-transformed and given 40percent weight in the aggregation.

2) Unsafe drinking water, measured as the proportion of a country's population exposed to health risks from their access to drinking water, defined by the primary water source used by households and the household water treatment, or the treatment that happens at the point of water collection. It is log-transformed and given 60percent weight in the aggregation.

Both indicators are measured using the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons. The issue category varies from 0 to 100.

2.1.17.22 Household solid fuels (epi_had)

Long tag: qog_ei_epi_had

Original tag: epi_had

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI measures household solid fuels using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to household air pollution (HAP) from the use of household solid fuels. The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation.

When using this variable, please cite both EPI and the original source.

2.1.17.23 Heavy Metals Issue Category (epi_hmt)

Long tag: qog_ei_epi_hmt

Original tag: epi_hmt

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Heavy Metals Issue Category consists of the indicator Lead Exposure, which measures the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons due to this risk. It is log-transformed. The issue category varies from 0 to 100.

2.1.17.24 CO2 from land cover (epi_lcb)

Long tag: qog_ei_epi_lcb

Original tag: epi_lcb

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

This indicator measures CO₂ emissions from land cover change and is calculated over the years 2001-2015. The unit of measurement is proportion.

Original source: Mullion Group.

When using this variable, please cite both EPI and the original source.

2.1.17.25 Marine protected areas (epi_mpa)

Long tag: qog_ei_epi_mpa

Original tag: epi_mpa

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Marine protected areas indicator is measured as the percentage of a country's total exclusive economic zone (EEZ) designated as marine protected areas (MPAs). MPAs represent a critical tool for protecting marine ecosystems from unsustainable fishing practices, pollution, and human disturbance. Because each country may have multiple EEZs, the summed area of MPAs is divided by the summed EEZ.

Original source: World Database on Protected Areas.

When using this variable, please cite both EPI and the original source.

2.1.17.26 Controlled solid waste (epi_msw)

Long tag: qog_ei_epi_msw

Original tag: epi_msw

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Controlled solid waste refers to the proportion of household and commercial waste generated in a country that is collected and treated in a manner that controls environmental risks. This metric counts waste as "controlled" if it is treated through recycling, composting, anaerobic digestion, incineration, or disposed of in a sanitary landfill.

Original source: Wiedinmyer et al. 2014 & Kaza et al. 2018.

When using this variable, please cite both EPI and the original source.

2.1.17.27 Marine trophic index (epi_mti)

Long tag: qog_ei_epi_mti

Original tag: epi_mti

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Marine Trophic Index (MTI) measures the health of a country's fishing stock based on expected catch and changes over time. The MTI measures the degree to which a country is depleting species at higher trophic levels and "fishing down the food web." The variable is log-transformed according to the formula $\ln(x+)$, where $= 9.51E-07$.

Original source: Sea Around Us.

When using this variable, please cite both EPI and the original source.

2.1.17.28 N2O growth rate (epi_noa)

Long tag: qog_ei_epi_noa

Original tag: epi_noa

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The N2O growth rate, which makes up 5percent of the Climate Change issue category, is calculated as the average annual rate of increase or decrease in raw nitrous oxide emissions over the years 2008-2017. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Potsdam Institute for Climate Impact Research.

When using this variable, please cite both EPI and the original source.

2.1.17.29 NOx growth rate (epi_nxa)

Long tag: qog_ei_epi_nxa

Original tag: epi_nxa

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The NOX growth rate is calculated as the average annual rate of increase or decrease in NOX over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Community Emissions Data Systems.

When using this variable, please cite both EPI and the original source.

2.1.17.30 Ozone exposure (epi_ozd)

Long tag: qog_ei_epi_ozd

Original tag: epi_ozd

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI measures ozone exposure using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to ground-level ozone pollution. The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation.

When using this variable, please cite both EPI and the original source.

2.1.17.31 Protected areas representativeness index (epi_par)

Long tag: qog_ei_epi_par

Original tag: epi_par

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The PARI indicator measures ecological representativeness as the proportion of biologically scaled environmental diversity included in a country's terrestrial protected areas. The measure relies on remote sensing, biodiversity informatics, and global modeling of fine-scaled variation in biodiversity composition for plant, vertebrate, and invertebrate species.

Original source: Commonwealth Scientific and Industrial Research Organization.

When using this variable, please cite both EPI and the original source.

2.1.17.32 Lead exposure (epi_pbd)

Long tag: qog_ei_epi_pbd

Original tag: epi_pbd

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI measures lead exposure using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to lead contamination in the environment. The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation.

When using this variable, please cite both EPI and the original source.

2.1.17.33 PM2.5 exposure (epi_pmd)

Long tag: qog_ei_epi_pmd

Original tag: epi_pmd

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Ambient particulate matter pollution measured with the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to fine air particulate matter smaller than 2.5 micrometers (PM2.5). The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation Transformation.

When using this variable, please cite both EPI and the original source.

2.1.17.34 SO2 growth rate (epi_sda)

Long tag: qog_ei_epi_sda

Original tag: epi_sda

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The SO2 growth rate is calculated as the average annual rate of increase or decrease in SO2 over the years 2005-2014. It is then adjusted for economic trends to isolate change due to policy rather than economic fluctuation.

Original source: Community Emissions Data Systems.

When using this variable, please cite both EPI and the original source.

2.1.17.35 Species habitat index (epi_shi)

Long tag: qog_ei_epi_shi

Original tag: epi_shi

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Species Habitat Index (SHI) estimates potential population losses, as well as regional and global extinction risks of individual species, using habitat loss as a proxy. The SHI indicator measures the proportion of suitable habitat within a country that remains intact for each species in that country relative to a baseline set in the year 2001.

Original source: Map of Life.

When using this variable, please cite both EPI and the original source.

2.1.17.36 Sustainable nitrogen management index (epi_snm)

Long tag: qog_ei_epi_snm

Original tag: epi_snm

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The Sustainable Nitrogen Management Index (SNMI) seeks to balance efficient application of nitrogen fertilizer with maximum crop yields as a measure of the environmental performance of agricultural production. The 2020 EPI uses the SNMI as a proxy for agricultural drivers of environmental damage.

Original source: UMCES.

When using this variable, please cite both EPI and the original source.

2.1.17.37 Species protection index (epi_spi)

Long tag: qog_ei_epi_spi

Original tag: epi_spi

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Species Protection Index (SPI) evaluates the species-level ecological representativeness of each country's protected area network. The SPI metric uses remote sensing data, global biodiversity informatics, and integrative models to map suitable habitat for over 30,000 terrestrial vertebrate, invertebrate, and plant species at high resolutions. The unit of measurement is percentage.

Original source: Map of Life.

When using this variable, please cite both EPI and the original source.

2.1.17.38 Terrestrial biome protection (Global weights) (epi_tbg)

Long tag: qog_ei_epi_tbg

Original tag: epi_tbg

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI derives the terrestrial biome protection indicators by first calculating the proportions of

the area of each of a country's biome types that are covered by protected areas and then constructing a weighted sum of the protection percentages for all biomes within that country. For the terrestrial biome protection (global weights) indicator, protection percentages are weighted according to the global prevalence of each biome type. This indicator evaluates a country's contribution toward the global 17percent protection goal.

Original source: World Database on Protected Areas.

When using this variable, please cite both EPI and the original source.

2.1.17.39 Terrestrial biome protection (National weights) (epi_tbn)

Long tag: qog_ei_epi_tbn

Original tag: epi_tbn

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI derives the terrestrial biome protection indicators by first calculating the proportions of the area of each of a country's biome types that are covered by protected areas and then constructing a weighted sum of the protection percentages for all biomes within that country. For the terrestrial biome protection (national weights) indicator, protection percentages are weighted according to the prevalence of each biome type within that country. This indicator evaluates a country's efforts to achieve 17percent protection for all biomes within its borders, as per Aichi Target 11.

Original source: World Database on Protected Areas.

When using this variable, please cite both EPI and the original source.

2.1.17.40 Tree cover loss (epi_tcl)

Long tag: qog_ei_epi_tcl

Original tag: epi_tcl

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI quantifies tree cover loss by constructing a five-year moving average of the percentage of forest lost from the extent of forest cover in the reference year 2000. A forest is defined as any land area with over 30percent canopy cover. The variable is log-transformed.

Original source: Global Forest Watch.

When using this variable, please cite both EPI and the original source.

2.1.17.41 Unsafe sanitation (epi_usd)

Long tag: qog_ei_epi_usd

Original tag: epi_usd

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI measures unsafe sanitation using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to their exposure to inadequate sanitation facilities. The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation.

When using this variable, please cite both EPI and the original source.

2.1.17.42 Unsafe drinking water (epi_uwd)

Long tag: qog_ei_epi_uwd

Original tag: epi_uwd

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

EPI measures unsafe drinking water using the number of age-standardized disability-adjusted life-years lost per 100,000 persons (DALY rate) due to exposure to unsafe drinking water. The variable is log-transformed.

Original source: Institute for Health Metrics and Evaluation.

When using this variable, please cite both EPI and the original source.

2.1.17.43 Waste Management Issue Category (epi_wmg)

Long tag: qog_ei_epi_wmg

Original tag: epi_wmg

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Waste Management Issue Category consists of the indicator Controlled Solid Waste, which refers to the proportion of household and commercial waste generated in a country that is collected and treated in a manner that controls environmental risks. This metric counts waste as "controlled" if it is treated through recycling, composting, anaerobic digestion, incineration, or disposed of in a sanitary landfill. The issue category varies from 0 to 100.

2.1.17.44 Water Resources Issue Category (epi_wrs)

Long tag: qog_ei_epi_wrs

Original tag: epi_wrs

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020), Wolf et al. (2022)

Description:

Water Resources Issue Category consists of the indicator Wastewater Treatment, which measures the percentage of wastewater that undergoes at least primary treatment, normalized by the proportion of the population connected to a municipal wastewater collection system. It is calculated through a straightforward product of wastewater treatment level and sewerage connection rate. The issue category varies from 0 to 100.

2.1.17.45 Wetland loss (epi_wtl)

Long tag: qog_ei_epi_wtl

Original tag: epi_wtl

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

Wetland loss is quantified using a five-year moving average of percentage of gross losses in wetland areas compared to the 1992 reference year. The variable is log-transformed according

to the formula $\ln(x+)$, where $= 2.47E-06$.

Original source: European Space Agency.

When using this variable, please cite both EPI and the original source.

2.1.17.46 Wastewater treatment (epi_wwt)

Long tag: qog_ei_epi_wwt

Original tag: epi_wwt

Dataset citation: Povitkina et al. (2021)

Variable citation: Wendling et al. (2020)

Description:

The percentage of wastewater that undergoes at least primary treatment in each country, normalized by the proportion of the population connected to a municipal wastewater collection system.

Original source: UNSD, OECD, Eurostat, etc.

When using this variable, please cite both EPI and the original source.

2.1.18 European Social Survey - Wave 1-9

Dataset by: European Social Survey The European Social Survey (ESS) is an academically-driven multi-country survey, which has been administered in over 30 countries to date. Its three aims are: first - to monitor and interpret changing public attitudes and values within Europe and to investigate how they interact with Europe's changing institutions; second - to advance and consolidate improved methods of cross-national survey measurement in Europe and beyond; and third - to develop a series of European social indicators, including attitudinal indicators. This dataset includes two types of variables: 1) percentage of respondents choosing a particular response option, and 2) average response per country, weighted using design weights (dweight), as recommended by the ESS. Link to the original source: <http://www.europeansocialsurvey.org/data/round-index.html>

2.1.18.1 Climate policy support: bans (mean) (ess_banhhap_m)

Long tag: qog_ei_ess_banhhap_m

Original tag: ess_banhhap_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D30-32: "To what extent are you in favour or against the following policies in [country] to reduce climate change? A law banning the sale of the least energy-efficient household appliances". (1) Strongly in favor, (2) Somewhat in favor, (3) Neither in favor nor against, (4) Somewhat against, (5) Strongly against. Answers (7) Refusal and (8) Don't know are deleted. A higher score means that there is a higher aversion towards the proposed ban in the general population. A lower score means that there is a higher support towards the ban in the general population.

2.1.18.2 Belief that climate change is natural (percent) (ess_ccnthum_p)

Long tag: qog_ei_ess_ccnthum_p

Original tag: ess_ccnthum_p

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Percent of replies "Entirely by natural processes" and "Somewhat by natural processes"

Mainly by natural processes" to D22: ""Do you think that climate change is caused by natural processes, human activity, or both?". (1) Entirely by natural processes, (2) Mainly by natural processes, (3) About equally by natural processes and human activity, (4) Mainly by human activity, (5) Entirely by human activity, (55) I don't think climate change is happening, (77) Refusal, (88) Don't know. A higher score means that there are more people who believe that climate change is happening due to natural rather than human-induced causes. A lower score means that there are fewer people who believe that these are natural processes that are behind climate change.

2.1.18.3 Personal responsibility to reduce climate change (mean) (ess_ccrdprs_m)

Long tag: qog_ei_ess_ccrdprs_m

Original tag: ess_ccrdprs_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D23: ""To what extent do you feel a personal responsibility to try to reduce climate change?". (00) Not at all - (10) A great deal. Answers (77) Refusal and (88) Don't know are deleted. The higher the score the more people feel personal responsibility for reducing climate change. The lower the score the fewer people feel personal responsibility for reducing climate change.

2.1.18.4 Climate change denial (percent) (ess_clmchnng_p)

Long tag: qog_ei_ess_clmchnng_p

Original tag: ess_clmchnng_p

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Percent of replies ""(3) Probably not changing" and ""(4) Definitely not changing" to D19: ""You may have heard the idea that the world's climate is changing due to increases in temperature over the past 100 years. What is your personal opinion on this? Do you think the world's climate is changing?". (1) Definitely changing, (2) Probably changing, (3) Probably not changing, (4) Definitely not changing, (7) Refusal, (8) Don't know. A higher score means that more people believe that the climate is not changing. A lower score means that more people believe that the climate is changing.

2.1.18.5 Thinking about climate change (mean) (ess_clmthgt_m)

Long tag: qog_ei_ess_clmthgt_m

Original tag: ess_clmthgt_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D20 and D21: ""How much have you thought about climate change before today?". (1) Not at all, (2) Very little, (3) Some, (4) A lot, (5) A great deal. Answers (7) Refusal and (8) Don't know are deleted.

D20 was only asked to those who replied ""(4) Definitely not changing" to question D19 ""Do you think climate is changing?". D21 is the same question but was asked to everyone else. In this dataset, we combined the replies for D20 and D21 before taking an average. A higher score means that a larger part of the population thought about climate change prior to the survey. A lower score means that a smaller part of the population thought about climate change prior to the survey.

2.1.18.6 Belief in climate action: governments (mean) (ess_gvsrdcc_m)

Long tag: qog_ei_ess_gvsrdcc_m

Original tag: ess_gvsrdcc_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D28: "And how likely do you think it is that governments in enough countries will take action that reduces climate change?". (00) Not likely at all - (10) Extremely likely. Answers (77) Refusal and (88) Don't know are deleted. A higher score means that larger parts of the population believe that enough governments will take action towards climate change. A lower score means that fewer people believe that enough governments will take action towards climate change.

2.1.18.7 Important to care for the environment (mean) (ess_impenv_m)

Long tag: qog_ei_ess_impenv_m

Original tag: ess_impenv_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to CARD 76: "Now I will briefly describe some people. Please listen to each description and tell me how much each person is or is not like you. Use this card for your answer;

She/he strongly believes that people should care for nature. Looking after the environment is important to her/him";.

- (1) Very much like me
- (2) Like me
- (3) Somewhat like me
- (4) A little like me
- (5) Not like me
- (6) Not like me at all

Answers "Don't know" are deleted. A higher score means that fewer people think that it is important to care about nature/environment. A lower score means that more people think that it is important to care about nature/environment.

2.1.18.8 Climate policy support: taxes (mean) (ess_inctxff_m)

Long tag: qog_ei_ess_inctxff_m

Original tag: ess_inctxff_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D30-32: "To what extent are you in favour or against the following policies in [country] to reduce climate change? Increasing taxes on fossil fuels, such as oil, gas and coal";.(1) Strongly in favor, (2) Somewhat in favor, (3) Neither in favor nor against, (4) Somewhat against, (5) Strongly against. Answers (7) Refusal and (8) Don't know are deleted. A higher score means that the aversion towards a fossil fuel tax is higher in the population. A lower score means that there is more support towards a fossil fuel tax in the population.

2.1.18.9 Belief in climate action: individuals (mean) (ess_lklmtten_m)

Long tag: qog_ei_ess_lklmtten_m

Original tag: ess_lklmtten_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D27: "How likely do you think it is that large numbers of people will actually limit their energy use to try to reduce climate change?". (00) Not likely at all - (10) Extremely likely. Answers (77) Refusal and (88) Don't know are deleted. A higher score means that more people believe that a large number of people are likely to limit energy consumption to reduce climate change. A lower score means that fewer people believe that a large number of people are likely to reduce energy consumption to reduce climate change.

2.1.18.10 Climate policy support: subsidies (mean) (ess_sbsrnen_m)

Long tag: qog_ei_ess_sbsrnen_m

Original tag: ess_sbsrnen_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D30-32: "To what extent are you in favour or against the following policies in [country] to reduce climate change? Using public money to subsidise renewable energy such as wind and solar power". (1) Strongly in favor, (2) Somewhat in favor, (3) Neither in favor nor against, (4) Somewhat against, (5) Strongly against. Answers (7) Refusal and (8) Don't know are deleted. A higher score means that there is more aversion in the population towards government subsidies towards renewable energy. A lower score means that there is more support for renewable energy subsidies.

2.1.18.11 Worry about climate change (mean) (ess_wrclmch_m)

Long tag: qog_ei_ess_wrclmch_m

Original tag: ess_wrclmch_m

Dataset citation: Povitkina et al. (2021)

Variable citation: NSD - Norwegian Centre for Research Data (2020)

Description:

Average reply to D24: "How worried are you about climate change?". (1) Not at all worried, (2) Not very worried, (3) Somewhat worried, (4) Very worried, (5) Extremely worried. Answers (7) Refusal and (8) Don't know are deleted. A higher score means that there is a higher degree of worry in the population about climate change. A lower score means that there is less worry in the population about climate change.

2.1.19 Environmental Land Use Data

Dataset by: Food and Agricultural Organization of the United Nations (FAO) The FAOSTAT Land Use domain contains data on 47 categories of land use, irrigation and agricultural practices, relevant to monitor agriculture, forestry, and fisheries activities at national, regional and global level. Data are available by country and year, with global coverage and annual updates. Note from original QoG codebook: Micronesia has been dropped due to duplicate cases. Link to the original source: <http://www.fao.org/faostat/en/#home>

2.1.19.1 Agricultural land (percent of Land area) (fao_luagr)

Long tag: qog_ei_fao_luagr

Original tag: fao_luagr

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Agricultural land as a share of total land area.

2.1.19.2 Arable land (percent of Agricultural land) (fao_luagrara)

Long tag: qog_ei_fao_luagrara

Original tag: fao_luagrara

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Arable land as a share of total agricultural land.

2.1.19.3 Cropland (percent of Agricultural land) (fao_luagrcrop)

Long tag: qog_ei_fao_luagrcrop

Original tag: fao_luagrcrop

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Cropland as a share of total agricultural land.

2.1.19.4 Agriculture area actually irrigated (percent of Agricultural land) (fao_luagrirrac)

Long tag: qog_ei_fao_luagrirrac

Original tag: fao_luagrirrac

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Agriculture area actually irrigated as a share of total agricultural land.

2.1.19.5 Land area equipped for irrigation (percent of Agricultural land) (fao_luagrirreq)

Long tag: qog_ei_fao_luagrirreq

Original tag: fao_luagrirreq

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Land area equipped for irrigation as a share of total agricultural land.

2.1.19.6 Land area equipped for irrigation (percent of Cropland) (fao_luagrirreqcrop)

Long tag: qog_ei_fao_luagrirreqcrop

Original tag: fao_luagrirreqcrop

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Land area equipped for irrigation as a share of total cropland.

2.1.19.7 Agriculture area under organic agric. (percent of Agricultural land) (fao_luagrorg)

Long tag: qog_ei_fao_luagrorg

Original tag: fao_luagrorg

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Agriculture area under organic agriculture as a share of total agricultural land.

2.1.19.8 Land under perm meadows and pastures (percent of Agricultural land) (fao_luagrpas)

Long tag: qog_ei_fao_luagrpas

Original tag: fao_luagrpas

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Land under perm meadows and pastures as a share of total agricultural land.

2.1.19.9 Land under permanent crops (percent of Agricultural land) (fao_luagrpcrop)

Long tag: qog_ei_fao_luagrpcrop

Original tag: fao_luagrpcrop

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Land under permanent crops as a share of total agricultural land.

2.1.19.10 Cropland (percent of Land area) (fao_lucrop)

Long tag: qog_ei_fao_lucrop

Original tag: fao_lucrop

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Cropland as a share of total land area.

2.1.19.11 Forest land (percent of Land area) (fao_luforest)

Long tag: qog_ei_fao_luforest

Original tag: fao_luforest

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Forest land as a share of total land area.

2.1.19.12 Planted forest (percent of Forest area) (fao_luforplant)

Long tag: qog_ei_fao_luforplant

Original tag: fao_luforplant

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Planted forest as a share of total forest area.

2.1.19.13 Other naturally regenerated forest (percent of Forest area) (fao_luforreg)

Long tag: qog_ei_fao_luforreg

Original tag: fao_luforreg

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Other naturally regenerated forest as a share of total forest area.

2.1.19.14 Land under perm meadows and pastures (percent of Land area) (fao_lupas)

Long tag: qog_ei_fao_lupas

Original tag: fao_lupas

Dataset citation: Povitkina et al. (2021)

Variable citation: Food and Agriculture Organization of the United Nations (2020), FAO (2023)

Description:

Land under perm meadows and pastures as a share of total land area.

2.1.20 Green Growth

Dataset by: Organisation for Economic Co-operation and Development The OECD Green Growth database contains selected indicators for monitoring progress towards green growth to support policy making and inform the public at large. The database synthesises data and indicators across a wide range of domains including a range of OECD databases as well as external data sources. The database covers OECD member and accession countries, key partners (including Brazil, China, India, Indonesia and South Africa) and other selected non-OECD countries. The indicators have been selected according to well-specified criteria and embedded in a conceptual framework, which is structured around four groups to capture the main features of green growth: (1) Environmental and resource productivity: indicate whether economic growth is becoming greener with more efficient use of natural capital and to capture aspects of production which are rarely quantified in economic models and accounting frameworks; (2) The natural asset base: indicate the risks to growth from a declining natural asset base; (3) Environmental dimension of quality of life: indicate how environmental conditions affect the quality of life and wellbeing of people; (4) Economic opportunities and policy responses: indicate the effectiveness of policies in delivering green growth and describe the societal responses needed to secure business and employment opportunities. Link to the original source: <https://stats.oecd.org/>

2.1.20.1 Population connected to public sewerage, percent total population (gg_asew_pop)

Long tag: qog_ei_gg_asew_pop

Original tag: gg_asew_pop

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of the total population with access to public sewerage.

2.1.20.2 Population connected to sewerage with primary treatment, percent total population (gg_asewp)

Long tag: qog_ei_gg_asewp

Original tag: gg_asewp

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of the total population with access to public sewerage that includes a primary treatment process.

Warning: this variable has some negative values, which falls outside the expected range for percentage variables. Check the original dataset for explanations or updates.

2.1.20.3 Population connected to sewerage with secondary treatment, percent total population (gg_asews)

Long tag: qog_ei_gg_asews

Original tag: gg_asews

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of the total population with access to public sewerage that includes a secondary treatment process.

2.1.20.4 Population connected to sewerage with tertiary treatment, percent total population (gg_asewt)

Long tag: qog_ei_gg_asewt

Original tag: gg_asewt

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of the total population with access to public sewerage that includes a tertiary treatment process.

2.1.20.5 Built up area per capita (gg_buapc)

Long tag: qog_ei_gg_buapc

Original tag: gg_buapc

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The number of square meters of built-up area per inhabitant (m²/person).

2.1.20.6 Built up area, percent total land (gg_buapt)

Long tag: qog_ei_gg_buapt

Original tag: gg_buapt

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The built up area expressed as a percentage of total land area.

2.1.20.7 Energy intensity, TPES per capita (gg_ei)

Long tag: qog_ei_gg_ei

Original tag: gg_ei

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The energy intensity calculated as TPES (Total Primary Energy Supply) per capita (toe/person).

2.1.20.8 Environmentally related government R and D budget, percent total government R and D (gg_envrd_gbaord)

Long tag: qog_ei_gg_envrd_gbaord

Original tag: gg_envrd_gbaord

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

Environmentally related government R&D budget measures government budget appropriations or outlays for environmentally related research and development (R&D). It is expressed as a percentage of total government R&D expenditure.

2.1.20.9 Environmentally related R and D expenditure, percent GDP (gg_envrd_gdp)

Long tag: qog_ei_gg_envrd_gdp

Original tag: gg_envrd_gdp

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The environmentally related research and development (R&D) expenditure, expressed as a percentage of gross domestic product (GDP).

2.1.20.10 Environmentally related ODA, percent total ODA (gg_eoda)

Long tag: qog_ei_gg_eoda

Original tag: gg_eoda

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The environmentally related Official Development Assistance (ODA) expressed as a percentage of total ODA.

2.1.20.11 Energy public RD and D budget, percent GDP (gg_erdgdp)

Long tag: qog_ei_gg_erdgdp

Original tag: gg_erdgdp

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The public budget for energy related research, development, and demonstration as a percentage of national gross domestic product (GDP).

2.1.20.12 Development of environment-related technologies, percent all technologies (gg_etp)

Long tag: qog_ei_gg_etp

Original tag: gg_etp

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The number of environment-related inventions expressed as a percentage of all domestic inventions (in all technologies).

Indicators of technology development are constructed by measuring inventive activity using patent data across a wide range of environment-related technological domains (ENV-TECH, see link below), including environmental management, water-related adaptation, and climate change mitigation technologies. The counts used here include only higher-value inventions (with patent family size = 2).

2.1.20.13 Development of environment-related technologies, percent inventions worldwide (gg_etpw)

Long tag: qog_ei_gg_etpw

Original tag: gg_etpw

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The number of environment-related inventions expressed as a percentage of environment-related inventions worldwide.

Indicators of technology development are constructed by measuring inventive activity using patent data across a wide range of environment-related technological domains (ENV-TECH), including environmental management, water-related adaptation, and climate change mitigation technologies. The counts used here include only higher-value inventions (with patent family size = 2, meaning inventions filed in two or more jurisdictions).

2.1.20.14 Fossil fuel public RD and D budget (excluding CCS), percent total energy public RD and D (gg_ffrd)

Long tag: qog_ei_gg_ffrd

Original tag: gg_ffrd

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The public budget directed at research, development, and demonstration (RD&D) related to fossil fuels, including oil, gas, and coal and excluding RD&D related to CO2 capture and storage (CCS), expressed as a percentage of total energy RD&D public budgets (directed at all forms of energy).

2.1.20.15 Forest resource stocks (gg_frs)

Long tag: qog_ei_gg_frs

Original tag: gg_frs

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The growing stock of standing trees expressed in million cubic meters (m3).

2.1.20.16 Forests under sustainable management certification FSC, percent total forest area (gg_fsmc)

Long tag: qog_ei_gg_fsmc

Original tag: gg_fsmc

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The share of forest area with a long-term management plan under the Forest Stewardship Council (FSC) certification expressed as a percentage of the total forest area.

2.1.20.17 Intensity of use of forest resources (gg_iufr)

Long tag: qog_ei_gg_iufr

Original tag: gg_iufr

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The intensity of use of forest resources measured as the ratio of actual fellings over annual productive capacity (i.e. gross increment).

2.1.20.18 Mortality from exposure to ambient ozone (gg_mao)

Long tag: qog_ei_gg_mao

Original tag: gg_mao

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The mortality from exposure to ambient ozone expressed in deaths per million inhabitants.

2.1.20.19 Mortality from exposure to lead (gg_ml)

Long tag: qog_ei_gg_ml

Original tag: gg_ml

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The mortality from exposure to lead expressed in deaths per million inhabitants.

2.1.20.20 Mortality from exposure to ambient PM2.5 (gg_mpm)

Long tag: qog_ei_gg_mpm

Original tag: gg_mpm

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The mortality from exposure to ambient PM2.5 expressed in deaths per million inhabitants.

2.1.20.21 Mortality from exposure to residential radon (gg_mr)

Long tag: qog_ei_gg_mr

Original tag: gg_mr

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The mortality from exposure to residential radon expressed in deaths per million inhabitants.

2.1.20.22 Municipal waste generated, kg per capita (gg_mwgpc)

Long tag: qog_ei_gg_mwgpc

Original tag: gg_mwgpc

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The waste collected by or on behalf of municipalities expressed in kilograms (kg) per person.

2.1.20.23 Municipal waste incinerated, percent treated waste (gg_mwipt)

Long tag: qog_ei_gg_mwipt

Original tag: gg_mwipt

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The municipal waste incinerated expressed as a percentage of all waste treated.

2.1.20.24 Municipal waste disposed to landfills, percent treated waste (gg_mwlpt)

Long tag: qog_ei_gg_mwlpt

Original tag: gg_mwlp

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The municipal waste disposed to landfills expressed as a percentage of all waste treated.

2.1.20.25 Municipal waste recycled or composted, percent treated waste (gg_mwrpt)

Long tag: qog_ei_gg_mwrpt

Original tag: gg_mwrpt

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The municipal waste recycled or composted expressed as a percentage of all waste treated.

2.1.20.26 ODA - all sectors - climate change mitigation, percent total ODA (gg_oda_ccm)

Long tag: qog_ei_gg_oda_ccm

Original tag: gg_oda_ccm

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The Official Development Assistance (ODA) targeting climate change mitigation expressed as a percentage of total ODA.

2.1.20.27 Percentage of population exposed to more than 10 g/m³ of PM_{2.5} (gg_pm25ex10p)

Long tag: qog_ei_gg_pm25ex10p

Original tag: gg_pm25ex10p

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of population exposed to a fine particulate matter (PM_{2.5}) concentration greater than 10 micrograms (g) per cubic meter (m³).

The World Health Organization (WHO) provides air quality guidelines based on scientific evidence and expert advice. 10 g/m³ is the air quality guideline (AQG): These are the lowest levels at which total, cardiopulmonary and lung cancer mortality have been shown to increase with more than 95percent confidence in response to long-term exposure to PM_{2.5}.

2.1.20.28 Percentage of population exposed to more than 35 g/m³ of PM_{2.5} (gg_pm25ex35p)

Long tag: qog_ei_gg_pm25ex35p

Original tag: gg_pm25ex35p

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of population exposed to a fine particulate matter (PM_{2.5}) concentration greater than 35 micrograms (g) per cubic meter (m³).

The World Health Organization (WHO) provides air quality guidelines based on scientific evidence and expert advice. 35 g/m³ is interim target-1: These levels are associated with about a 15percent

higher long-term mortality risk relative to the Air Quality Guideline (AQG) level, which is 10 g/m³.

2.1.20.29 Mean population exposure to PM2.5 (gg_pm25exm)

Long tag: qog_ei_gg_pm25exm

Original tag: gg_pm25exm

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The average microgram concentration of fine particulate matter (PM2.5) per cubic meter exposed to the population. This environmental and health hazard is measured by population-weighted concentration estimates (See OECD dataset "Exposure to PM2.5 in countries and regions").

2.1.20.30 Petrol tax, USD per litre (gg_pt)

Long tag: qog_ei_gg_pt

Original tag: gg_pt

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The tax rates per litre of petrol expressed at constant 2015 US dollars using purchasing power parity (PPP). The tax rates are calculated as the arithmetic average of the household excise tax for the unleaded premium 95, unleaded premium 98, and unleaded regular petrol, and are deflated using the Consumer Price Index.

2.1.20.31 Renewable energy supply, percent TPES (gg_re_tpes)

Long tag: qog_ei_gg_re_tpes

Original tag: gg_re_tpes

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

Renewable energy supply is defined as the contribution of renewables to the total primary energy supply (TPES).

2.1.20.32 Renewable electricity, percent total electricity generation (gg_reperegen)

Long tag: qog_ei_gg_reperegen

Original tag: gg_reperegen

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of the national electrical supply generated from renewable sources.

2.1.20.33 Renewable energy public RD and D budget, percent total energy public RD and D (gg_rerd_erd)

Long tag: qog_ei_gg_rerd_erd

Original tag: gg_rerd_erd

Dataset citation: Povitkina et al. (2021)

Variable citation: Organisation for Economic Co-operation and Development (OECD) (2020c)

Description:

The percentage of all public energy related research, development, and demonstration (RD&D) that is directed towards renewable energy.

2.1.20.34 Threatened bird species, percent total known species (gg_tbs)*Long tag:* qog_ei_gg_tbs*Original tag:* gg_tbs*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Organisation for Economic Co-operation and Development (OECD) (2020c)*Description:*

The number of threatened bird species expressed as a percentage of total known species within a country.

2.1.20.35 Threatened mammal species, percent total known species (gg_tms)*Long tag:* qog_ei_gg_tms*Original tag:* gg_tms*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Organisation for Economic Co-operation and Development (OECD) (2020c)*Description:*

The number of threatened mammal species expressed as a percentage of total known species within a country.

2.1.20.36 Threatened vascular plant species, percent total known species (gg_tps)*Long tag:* qog_ei_gg_tps*Original tag:* gg_tps*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Organisation for Economic Co-operation and Development (OECD) (2020c)*Description:*

The number of threatened vascular plant species expressed as a percentage of total known species within a country.

2.1.20.37 Water stress, total freshwater abstraction as percent total available renewable resources (gg_wsa)*Long tag:* qog_ei_gg_wsa*Original tag:* gg_wsa*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Organisation for Economic Co-operation and Development (OECD) (2020c)*Description:*

The total freshwater abstraction as a percentage of available renewable sources, as a proxy for water stress (scarcity). Abstraction refers to any process of water removal, extraction, or diversion for human use. A higher percentage indicates greater water stress.

2.1.20.38 Water stress, total freshwater abstraction as percent total internal renewable resources (gg_wsi)*Long tag:* qog_ei_gg_wsi*Original tag:* gg_wsi*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Organisation for Economic Co-operation and Development (OECD) (2020c)*Description:*

The total freshwater abstraction as a percentage of available internal renewable sources, as a proxy for water stress. Internal resources refer only to river flows and groundwater from rainfall within the country. Abstraction refers to any process of water removal, extraction, or diversion for human use. A higher percentage, therefore, indicates greater water stress.

2.1.21 International Environmental Agreements Database Project

Dataset by: International Environmental Agreements Database Project International Environmental Agreements (IEA) include efforts to regulate human interactions with the environment that involve legally binding commitments ("agreements") among governments ("international") that have environmental protection as a primary objective ("environmental"). The IEAs include: - instruments designated as convention, treaty, agreement, accord, or their non-English equivalents, and protocols and amendments to such instruments; - instruments, regardless of designation, establishing intergovernmental commissions; - instruments, regardless of designation, identified as binding by reliable sources (e.g., by a secretariat, UNEP, or published legal analysis); or - instruments, regardless of designation, whose texts fit accepted terminologies of legally-binding agreements. Intergovernmental "soft laws," such as action plans, agreed measures, codes of conduct, declarations, resolutions, and similar policies that are not binding are excluded. European Union (EU) directives are also excluded due to their unique status. Link to the original source: <https://iea.uoregon.edu/>

2.1.21.1 Number of IEAs entered into force for the first time (iead_eif1)

Long tag: qog_ei_iead_eif1

Original tag: iead_eif1

Dataset citation: Povitkina et al. (2021)

Variable citation: Mitchell (2020)

Description:

The number of international environmental agreements, amendments, and protocols that entered into force for the first time (before any withdrawals), in the recorded year.

2.1.21.2 Number of IEAs entered into force for the second time (iead_eif2)

Long tag: qog_ei_iead_eif2

Original tag: iead_eif2

Dataset citation: Povitkina et al. (2021)

Variable citation: Mitchell (2020)

Description:

The number of international environmental agreements, amendments, and protocols that entered into force after the first withdrawal, in the recorded year.

2.1.21.3 Number of IEAs entered into force for the third time (iead_eif3)

Long tag: qog_ei_iead_eif3

Original tag: iead_eif3

Dataset citation: Povitkina et al. (2021)

Variable citation: Mitchell (2020)

Description:

The number of international environmental agreements, amendments, and protocols that entered into force after the second withdrawal, in the recorded year.

2.1.21.4 Number of IEAs in force, counting terminated IEAs (iead_inforce)

Long tag: qog_ei_iead_inforce

Original tag: iead_inforce

Dataset citation: Povitkina et al. (2021)

Variable citation: Mitchell (2020)

Description:

The number of international environmental agreements, amendments, and protocols in force, including international environmental agreements that have been terminated.

2.1.21.5 Number of IEAs in force, not counting terminated IEAs (iead_inforce_noterm)*Long tag:* qog_ei_iead_inforce_noterm*Original tag:* iead_inforce_noterm*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Mitchell (2020)*Description:*

The number of international environmental agreements, amendments, and protocols in force, not counting terminated international environmental agreements.

2.1.21.6 Number of IEAs ratified per year (iead_rat)*Long tag:* qog_ei_iead_rat*Original tag:* iead_rat*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Mitchell (2020)*Description:*

The number of international environmental agreements, amendments, and protocols ratified in the recorded year.

The users are encouraged to use "entry into force" instead of signatures and ratifications.

2.1.21.7 Number of IEAs signed per year (iead_sig)*Long tag:* qog_ei_iead_sig*Original tag:* iead_sig*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Mitchell (2020)*Description:*

The number of international environmental agreements, amendments, and protocols signed in the recorded year.

The data on signatures are incomplete. Signatures are fewer than ratifications or entry into force because secretariats, e.g., the UN Treaty Series, often do not keep track of signatures. The users are encouraged to use "entry into force" instead of signatures and ratifications.

2.1.21.8 Number of terminated IEAs per year (iead_term)*Long tag:* qog_ei_iead_term*Original tag:* iead_term*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Mitchell (2020)*Description:*

The number of international environmental agreements, amendments, and protocols terminated in the recorded year.

2.1.21.9 Number of first withdrawals from IEAs per year (iead_withdraw1)*Long tag:* qog_ei_iead_withdraw1*Original tag:* iead_withdraw1*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Mitchell (2020)*Description:*

The number of first-time withdrawals from international environmental agreements,

amendments, and protocols in the recorded year.

2.1.21.10 Number of second withdrawals from IEAs per year (iead_withdraw2)

Long tag: qog_ei_iead_withdraw2

Original tag: iead_withdraw2

Dataset citation: Povitkina et al. (2021)

Variable citation: Mitchell (2020)

Description:

The number of second-time withdrawals from international environmental agreements, amendments, and protocols in the recorded year.

2.1.22 The International Social Survey Programme. Environment Module

Dataset by: International Social Survey Programme The International Social Survey Programme (ISSP) is an annual program of cross-national survey collaboration, covering a wide range of topics important for social science research. Since 1985 the ISSP provides international data sets, enabling cross-cultural and cross-temporal research. "Environment" is one of the eleven ISSP topic modules. Central themes are attitudes towards environment-related issues, such as environmental protection, respondents' behavior, and respondents' preferences regarding governmental measures on environmental protection. This dataset includes two types of variables: 1) percentage of respondents choosing a particular response option, and 2) average response per country, unweighted, primarily because weights are unavailable for some countries. Correlation between weighted and unweighted means for countries that do provide weights is above .95 for most of the included variables and does not go below .89. Link to the original source: <https://www.gesis.org/en/issp/modules>

2.1.22.1 Worry about environment vs jobs (mean) (issp_10am)

Long tag: qog_ei_issp_10am

Original tag: issp_10am

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to the question: "How much do you agree or disagree with this statement? We worry too much about the future of the environment and not enough about prices and jobs today". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 10a.

In Environment II (2000) - question 4a.

In Environment I (1993) - question 5a.

A higher score means that smaller parts of the population think that there is too much worry about the environment. A lower score means that larger parts of the population think that there is too much worry about the environment and too little worry about prices and jobs.

2.1.22.2 Unwillingness to pay higher prices (percent) (issp_12ap)

Long tag: qog_ei_issp_12ap

Original tag: issp_12ap

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies "fairly unwilling" and "very unwilling" to 12a: "How willing would you be to pay much higher prices in order to protect the environment?". Original replies include: (1) Very willing, (2) Fairly willing, (3)

Neither willing nor unwilling, (4) Fairly unwilling, (5) Very unwilling, (8) Can't choose.

In Environment III (2010) - question 12a.
In Environment II (2000) - question 7a.
In Environment I (1993) - question 8a.

A higher score means that fewer people are willing to pay higher prices for environmental protection. A lower score means that more people are willing to pay higher prices for environmental protection.

2.1.22.3 Unwillingness to pay higher taxes (percent) (issp_12bp)

Long tag: qog_ei_issp_12bp

Original tag: issp_12bp

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies "fairly unwilling" and "very unwilling" to 12b: "And how willing would you be to pay much higher taxes in order to protect the environment?". Original replies include: (1) Very willing, (2) Fairly willing, (3) Neither willing nor unwilling, (4) Fairly unwilling, (5) Very unwilling, (8) Can't choose.

In Environment III (2010) - question 12b.
In Environment II (2000) - question 7b.
In Environment I (1993) - question 8b.

A higher score means that fewer people are willing to pay more taxes for environmental protection. A lower score means that more people are willing to pay higher taxes for environmental protection.

2.1.22.4 Unwillingness to cut in standard of living (percent) (issp_12cp)

Long tag: qog_ei_issp_12cp

Original tag: issp_12cp

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies "fairly unwilling" and "very unwilling" to 12c: "And how willing would you be to accept cuts in your standard of living in order to protect the environment?". Original replies include: (1) Very willing, (2) Fairly willing, (3) Neither willing nor unwilling, (4) Fairly unwilling, (5) Very unwilling, (8) Can't choose.

In Environment III (2010) - question 12c.
In Environment II (2000) - question 7c.
In Environment I (1993) - question 8c.

A higher score means that fewer people are willing to accept cuts in the standard of living for environmental protection. A lower score means that more people are willing to accept cuts in the standard of living for environmental protection.

2.1.22.5 Individual action is insufficient (mean) (issp_13am)

Long tag: qog_ei_issp_13am

Original tag: issp_13am

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 13a: "How much do you agree or disagree with this statement? It is just too difficult for someone like me to do much about the environment". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 13a.

In Environment II (2000) - question 8a.

In Environment I (1993) - question 9a.

A higher score means that fewer people believe that it is too difficult to do something about the environment as an individual. A lower score means that more people believe that it is too difficult to do something about the environment as an individual.

2.1.22.6 Environmental behavior (mean) (issp_13bm)

Long tag: qog_ei_issp_13bm

Original tag: issp_13bm

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 13b: "How much do you agree or disagree with this statement? I do what is right for the environment, even when it costs more money or takes more time". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 13b.

In Environment II (2000) - question 8b.

In Environment I (1993) - question 9b.

A higher score means that fewer people are willing to spend more money/time to do what is best for the environment. A lower score means that more people are willing to spend more money/time to do what is right for the environment.

2.1.22.7 Claims about environmental threats are exaggerated (mean) (issp_13em)

Long tag: qog_ei_issp_13em

Original tag: issp_13em

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 13e: "How much do you agree or disagree with this statement? Many of the claims about environmental threats are exaggerated". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Answers (8) Can't choose are deleted.

In Environment III (2010) - question 13e.

In Environment II (2000) - question 8e.

In Environment I (1993) - question not part of the survey.

A higher score means that fewer people think that environmental threats are exaggerated. A lower score means that more people think that environmental threats are exaggerated.

2.1.22.8 Perceived vulnerability to environmental problems (mean) (issp_13gm)

Long tag: qog_ei_issp_13gm

Original tag: issp_13gm

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 13g: "How much do you agree or disagree with this statement? Environmental problems have a direct effect on my everyday life". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 13g.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

A higher score means that fewer people think that environmental problems affect everyday life. A lower score means that more people think that environmental problems affect everyday life.

2.1.22.9 Support for government action to make people comply (percent) (issp_15ap)

Long tag: qog_ei_issp_15ap

Original tag: issp_15ap

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies for 15a: "If you had to choose, which one of the following would be closest to your views? (2) Government should pass laws to make ordinary people protect the environment, even if it interferes with people's rights to make their own decisions". Other replies include (1) Government should let ordinary people decide for themselves how to protect the environment, even if it means they don't always do the right thing, and (8) Can't choose.

In Environment III (2010) - question 15a.

In Environment II (2000) - question 13a.

In Environment I (1993) - question 18a.

The higher the score the higher the belief that the government should pass laws to make people protect the environment. The lower the score the lower the belief that the government should pass laws to make people protect the environment.

2.1.22.10 Priority of future energy sources - fossil fuels (percent) (issp_18p)

Long tag: qog_ei_issp_18p

Original tag: issp_18p

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies (1) Coal, oil and natural gas to 18: "To which of the following should [COUNTRY] give priority in order to meet its future energy needs?". Other replies include: (2) Nuclear power, (3) Solar, wind or water power, (4) Fuels made from crop, (5) None of them.

In Environment III (2010) - question 18.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of survey.

The higher the score the higher the percentage of people that prefers fossil fuels over other sources. The lower the score the lower the percentage of people that prefers fossil fuels over other sources.

2.1.22.11 Attitudes on international environmental agreements (mean) (issp_19am)*Long tag:* qog_ei_issp_19am*Original tag:* issp_19am*Dataset citation:* Povitkina et al. (2021)*Variable citation:* ISSP Research Group (2003)*Description:*

Average reply to 19a: "How much do you agree or disagree with each of these statements? For environmental problems, there should be international agreements that [COUNTRY] and other countries should be made to follow". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 19a.

In Environment II (2000) - question 16a.

In Environment I (1993) - question not part of the survey.

A higher score means that there is less support in the population for international agreements. A lower score means that there is more support in the population towards international agreements.

2.1.22.12 Attitudes towards global environmental justice (mean) (issp_19bm)*Long tag:* qog_ei_issp_19bm*Original tag:* issp_19bm*Dataset citation:* Povitkina et al. (2021)*Variable citation:* ISSP Research Group (2003)*Description:*

Average reply to 19b: "How much do you agree or disagree with each of these statements? Poorer countries should be expected to make less effort than richer countries to protect the environment". (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 19b.

In Environment II (2000) - question 16b.

In Environment I (1993) - question not part of the survey.

A higher score means that fewer people think that poorer countries should do less than rich countries to protect the environment. A lower score means that more people think that poorer countries should do less than rich countries to protect the environment.

2.1.22.13 Environment is most or next most important issue (percent) (issp_1ap)*Long tag:* qog_ei_issp_1ap*Original tag:* issp_1ap*Dataset citation:* Povitkina et al. (2021)*Variable citation:* ISSP Research Group (2003)*Description:*

Percent replying "The environment" to 1a: "Which of these issues is the most important for [COUNTRY] today?" plus percent replying "The environment" to 1b: "Which of these issues is the next most important for [COUNTRY] today?". The issues in the list include: (1) Health care, (2) Education, (3) Crime, (4) The environment, (5) Immigration, (6) The economy, (7) Terrorism, (8) Poverty, (9) None of these, (98) Can't choose.

In Environment III (2010) - questions 1a and 1b.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

The higher the score the higher the percentage of the population that prioritizes the environment as the most or second most important issue. The lower the score the smaller the percentage of the population that prioritizes the environment as the most or second most important issue.

2.1.22.14 Reported extent of recycling (mean) (issp_20am)

Long tag: qog_ei_issp_20am

Original tag: issp_20am

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 20a: "How often do you make a special effort to sort glass or tins or plastic or newspapers and so on for recycling?". (1) Always, (2) Often, (3) Sometimes, (4) Never. Responses (8) Recycling not available where I live are deleted.

In Environment III (2010) - question 20a.

In Environment II (2000) - question 19a.

In Environment I (1993) - question 19a.

A higher score means that fewer people make an effort to recycle correctly. A lower score means that more people make an effort to recycle correctly.

2.1.22.15 Recycling not available (percent) (issp_20ap)

Long tag: qog_ei_issp_20ap

Original tag: issp_20ap

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of replies (8) Recycling not available where I live to 20a: "How often do you make a special effort to sort glass or tins or plastic or newspapers and so on for recycling?".

In Environment III (2010) - answer not included.

In Environment II (2000) - question 19a.

In Environment I (1993) - question 19a.

A higher score means that more people have access to recycling facilities. A lower score means that fewer people have access to recycling facilities.

2.1.22.16 Reducing energy use for the environment (mean) (issp_20dm)

Long tag: qog_ei_issp_20dm

Original tag: issp_20dm

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 20d: "How often do you reduce the energy or fuel you use at home for environmental reasons?". (1) Always, (2) Often, (3) Sometimes, (4) Never.

In Environment III (2010) - question 20d.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

A higher score means that fewer people make a special effort to reduce energy consumption for environmental reasons. A lower score means that more people make a special effort to reduce energy consumption for environmental reasons.

2.1.22.17 Membership in environmental groups (percent) (issp_21p)

Long tag: qog_ei_issp_21p

Original tag: issp_21p

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of "yes"-replies to 21: "Are you a member of any group whose main aim is to preserve or protect the environment?";.

In Environment III (2010) - question 21.

In Environment II (2000) - question 20.

In Environment I (1993) - question 20.

A higher score means that more people are members of environmental groups. A lower score means that fewer people are members of environmental groups.

2.1.22.18 Signed petitions about environmental issues (percent) (issp_22ap)

Long tag: qog_ei_issp_22ap

Original tag: issp_22ap

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of "yes"-replies to 22a: "In the last five years, have you signed a petition about an environmental issue?";.

In Environment III (2010) - question 22a.

In Environment II (2000) - question 21a.

In Environment I (1993) - question 21a.

A higher score means that more people signed petitions for environmental issues in the 2 years prior to the survey. A lower score means that fewer people signed petitions for environmental issues in the 2 years prior to the survey.

2.1.22.19 Given money to an environmental group (percent) (issp_22bp)

Long tag: qog_ei_issp_22bp

Original tag: issp_22bp

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of "yes"-replies to 22b: "In the last five years, have you given money to an environmental group (including NGOs and lobby groups)?";.

In Environment III (2010) - question 22b.

In Environment II (2000) - question 21b.

In Environment I (1993) - question 21b.

A higher score means that more people gave money to environmental groups in the 5 years prior to the survey. A lower score means that fewer people gave money to environmental groups in the 5 years prior to the survey.

2.1.22.20 Taken part in a protest/demonstration about environmental issues (percent) (issp_22cp)

Long tag: qog_ei_issp_22cp

Original tag: issp_22cp

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Percent of "yes"-replies to 22c: "In the last five years, have you taken part in a protest or demonstration about an environmental issue?"

In Environment III (2010) - question 22c.

In Environment II (2000) - question 21c.

In Environment I (1993) - question 21c.

A higher score means that more people participated in environmental protests in the 5 years prior to the survey. A lower score means that fewer people participated in environmental protests in the 5 years prior to the survey.

2.1.22.21 Environmental concern (mean) (issp_6m)

Long tag: qog_ei_issp_6m

Original tag: issp_6m

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to the question: "Generally speaking, how concerned are you about environmental issues?". (1) Not at all concerned - (5) Very concerned. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 6.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

A higher score means that more people are concerned about environmental issues. A lower score means that fewer people are concerned about environmental issues.

2.1.22.22 Knowledge about causes of environmental problems (mean) (issp_8am)

Long tag: qog_ei_issp_8am

Original tag: issp_8am

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 8a: "How much do you feel you know about the causes of these sorts of environmental problems?". (1) Know nothing at all - (5) Know a great deal. Replies (8) Can't choose are deleted. These sorts of environmental problems refer to (1) Air pollution, (2) Chemicals and pesticides, (3) Water shortage, (4) Water pollution, (5) Nuclear waste, (6) Domestic waste disposal, (7) Climate change, (8) Genetically modified foods, (9) Using up our natural resources.

In Environment III (2010) - question 8a.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

A higher score means that more people feel that they know about the causes of environmental

problems. A lower score means that fewer people feel that they know about the causes of environmental problems.

2.1.22.23 Knowledge about solutions to environmental problems (mean) (issp_8bm)

Long tag: qog_ei_issp_8bm

Original tag: issp_8bm

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 8b: "And how much do you feel you know about solutions to these sorts of environmental problems?";. (1) Know nothing at all - (5) Know a great deal. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 8b.

In Environment II (2000) - question not part of the survey.

In Environment I (1993) - question not part of the survey.

A higher score means that more people feel that they know about the solutions to environmental problems. A lower score means that fewer people feel that they know about the solutions to environmental problems.

2.1.22.24 Belief in science (mean) (issp_9am)

Long tag: qog_ei_issp_9am

Original tag: issp_9am

Dataset citation: Povitkina et al. (2021)

Variable citation: ISSP Research Group (2003)

Description:

Average reply to 9a: "How much do you agree or disagree with this statement? We believe too often in science, and not enough in feelings and faith";. (1) Agree strongly, (2) Agree, (3) Neither agree nor disagree, (4) Disagree, (5) Disagree strongly. Replies (8) Can't choose are deleted.

In Environment III (2010) - question 9a.

In Environment II (2000) - question 3a.

In Environment I (1993) - question 4a.

A higher score means that there are fewer people who think that we believe in science too often and not enough in feelings and faith. A lower score means that there are more people who think that we believe in science too often and not enough in feelings and faith.

2.1.23 Natural Resource Management Index Data

Dataset by: Natural Resource Management Index The Natural Resource Protection and Child Health Indicators, 2019 Release, is produced in support of the U.S. Millennium Challenge Corporation (MCC) as selection criteria for funding eligibility. The Natural Resource Protection Indicator (NRPI) and Child Health Indicator (CHI) are based on proximity-to-target scores ranging from 0 to 100 (at target). The NRPI covers 234 countries and is calculated based on the weighted average percentage of biomes under protected status. The CHI is a composite index for 195 countries derived from the average of three proximity-to-target scores for access to at least basic water and sanitation, along with child mortality. The 2019 release includes a consistent time series of NRPI scores for 2015 to 2019 and CHI scores for 2010 to 2018. Link to the original source: <http://sedac.ciesin.columbia.edu/data/collection/nrmi>

2.1.23.1 Natural Resource Protection Indicator (nrmi_nrpi)

Long tag: qog_ei_nrmi_nrpi

Original tag: nrmi_nrpi

Dataset citation: Povitkina et al. (2021)

Variable citation: Center for International Earth Science Information Network CIESIN (2019)

Description:

Natural Resource Protection Indicator assesses whether a country is protecting at least 17percent of all of its biomes (e.g. deserts, forests, grasslands, aquatic, and tundra). It is designed to capture the comprehensiveness of a government's commitment to habitat preservation and biodiversity protection. The World Wildlife Fund provides the underlying biome data, and the United Nations Environment Program World Conservation Monitoring Center provides the underlying data on protected areas.

2.1.24 Policy Instruments for the Environment

Dataset by: Organisation for Economic Co-operation and Development Policy Instruments for the Environment (PINE) is originally developed by OECD in co-operation with the European Environment Agency (EEA). The database contains detailed qualitative and quantitative information on environmentally related taxes, fees and charges, tradable permits, deposit-refund systems, environmentally motivated subsidies, and voluntary approaches used for environmental policy. The dataset covers OECD member countries, accession countries and selected non-OECD countries since the year 1994, and it has been cross-validated and complemented with Revenue statistics from the OECD Tax statistics database and official national sources. Link to the original source: <http://oe.cd/pine>

2.1.28 Exposure to PM2.5 in Countries and Regions

Dataset by: Organisation for Economic Co-operation and Development The underlying PM2.5 concentration estimates are taken from the Global Burden of Disease (GBD) 2019 project. They are derived by integrating satellite observations, chemical transport models, and measurements from ground monitoring station networks. The concentration estimates are population-weighted using gridded population datasets from the Joint Research Center Global Human Settlement project. These are produced by distributing census-derived population estimates from the Gridded Population of the World, version 4 from the NASA Socioeconomic Data and Applications Center according to the density and distribution of built-up areas. For political and administrative boundaries, OECD (2020) territorial grid units are used where available, for the remaining countries, the FAO (2015) Global Administrative Unit Layers (GAUL 2014) are used (see below for details). The OECD (2020) Functional Urban Area definition is used for cities. The accuracy of these exposure estimates varies considerably by location. Accuracy is poorer in areas with few monitoring stations and in areas with very high concentrations such as Africa, the Middle-East and South Asia. Accuracy is generally good in regions with dense monitoring station networks (such as most advanced economies). See Shaddick et al. (2018) for further details. See Green Growth dataset for further measures of PM exposure. Link to the original source: https://www.oecd-ilibrary.org/environment/data/oecd-environmentstatistics_env-data-en

2.1.29 The Ocean Health Index Data

Dataset by: The Ocean Health Index The Ocean Health Index is a valuable tool for the ongoing assessment of ocean health. By providing a means to advance comprehensive ocean policy and compare future progress, the Index can inform decisions about how to use or protect marine ecosystems. The Index is a collaborative effort, made possible through contributions from more than 65 scientists/ocean experts and partnerships between organizations including the National Center for Ecological Analysis and Synthesis, Sea Around Us, Conservation International, National Geographic, and the New England Aquarium. The Index assesses the ocean based on 10 widely-held public goals for a healthy ocean. They are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Sense of Place, Coastal Livelihoods Economies, Tourism Recreation, Clean Waters, Biodiversity. Link to the original source: <http://www.oceanhealthindex.org>

2.1.29.1 Fisheries management effectiveness and opportunity (ohi_aoacc)*Long tag:* qog_ei_ohi_aoacc*Original tag:* ohi_aoacc*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Halpern et al. (2018)*Description:*

Fisheries management effectiveness and opportunity. The effectiveness of fisheries management in all countries with coastal areas is assessed by using a combination of surveys, empirical data, and enquiries to fisheries experts. They evaluated six aspects of each management regime: Scientific Robustness, Policy Transparency, Implementation Capacity, Subsidies, Fishing Effort, and Foreign Fishing, scoring each category from 0 to 100.

For more details on the variable construction, see the original source:

Mora, C., Myers, R.A., Coll, M., Libralato, S., Pitcher, T.J., Sumaila, R.U., Worm, B. (2009). Management Effectiveness of the World's Marine Fisheries. *PLoS Biol*, 7(6), e1000131.

2.1.29.5 Sea surface temperature (SST) anomalies (ohi_csst)

Long tag: qog_ei_ohi_csst

Original tag: ohi_csst

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Sea surface temperature (SST) anomalies. SST of the ocean is indicated by measurements taken at depths that range from 1 millimeter to 20 meters. This measurement does not indicate absolute temperature at a location, but instead determines the number of positive temperature deviations (anomalies) that exceed the natural range of variation for a given location, i.e. the frequency with which a location experiences unnaturally warm temperature.

For more details on the variable construction, see the original sources:

AVHRR Pathfinder Version 5.0 SST data.

2.1.29.6 UV radiation (ohi_cuv)

Long tag: qog_ei_ohi_cuv

Original tag: ohi_cuv

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

UV radiation. Ultraviolet radiation (UVR) is the portion of solar radiation with wavelengths of 200-400 nanometers (nm). UV Radiation was measured as the number of times in each 1-degree cell that the monthly average exceeded the climatological mean +1 standard deviation. These values were summed across the 12 months to provide a single value, ranging from 0-19.

2.1.29.10 CBD survey: habitat (ohi_hab)*Long tag:* qog_ei_ohi_hab*Original tag:* ohi_hab*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Halpern et al. (2018)*Description:*

CBD survey: habitat. A resilience measure based on questions 153(a,b,c,e,g) and 158(a,b,c,f,g,h) from The Convention on Biological Diversity country questionnaire (Third National Report to the CBD, from 2005).

Question 153: Do your country's strategies and action plans include the following:

- a) Developing new marine and coastal protected areas;
- b) Improving the management of existing marine and coastal protected areas;
- c) Building capacity within the country for management of marine and coastal resources, including through educational programmes and targeted research initiatives;
- e) Protection of areas important for reproduction, such as spawning and nursery areas;
- g) Controlling excessive fishing and destructive fishing practices?

Question 158: Which of the following statements can best describe the current status of marine and coastal protected areas in your country:

- a) Marine and coastal protected areas have been declared and gazetted;
- b) Management plans for these marine and coastal protected areas have been developed with involvement of all stakeholders;
- c) Effective management with enforcement and monitoring has been put in place;
- f) The national system of marine and coastal protected areas includes areas managed for purpose of sustainable use, which may allow extractive activities;
- g) The national system of marine and coastal protected areas includes areas which exclude extractive uses;
- h) The national system of marine and coastal protected areas is surrounded by sustainable management practices over the wider marine and coastal environment?

2.1.29.18 CBD Survey: Mariculture (ohi_maricul)

Long tag: qog_ei_ohi_maricul

Original tag: ohi_maricul

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

CBD Survey: Mariculture. A resilience measure based on questions 158(d) and 159(a-1) from The Convention on Biological Diversity country questionnaire (Third National Report to the CBD, from 2005).

Question 158: Which of the following statements can best describe the current status of marine and coastal protected areas in your country:

d) A national system or network of marine and coastal protected areas is under development?

Question 159: Is your country applying the following techniques aimed at minimizing adverse impacts of mariculture on marine and coastal biodiversity?

- a) Application of environmental impact assessments for mariculture developments;
- b) Development and application of effective site selection methods in the framework of integrated marine and coastal area management;
- c) development of effective methods for effluent and waste control;
- d) Development of appropriate genetic resource management plans at the hatchery level;
- e) Development of controlled hatchery and genetically sound reproduction methods in order to avoid seed collection from nature;
- f) If seed collection from nature cannot be avoided, development of environmentally sound practices for spat collecting operations, including use of selective fishing gear to avoid by-catch;
- g) Use of native species and subspecies in mariculture;
- h) Implementation of effective measures to prevent the inadvertent release of mariculture species and fertile polypoids;
- i) Use of proper methods of breeding and proper places of releasing in order to protect genetic diversity;
- j) Minimizing the use of antibiotics through better husbandry techniques;
- k) Use of selective methods in commercial fishing to avoid or minimize bycatch;
- l) Considering traditional knowledge, where applicable, as a source to develop sustainable mariculture techniques.

2.1.29.21 The Ocean Health Index (ohi_ohi)*Long tag:* qog_ei_ohi_ohi*Original tag:* ohi_ohi*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Halpern et al. (2018), Halpern et al. (2012)*Description:*

The Ocean Health Index establishes reference points for achieving ten widely accepted socio-ecological objectives and scores the oceans adjacent to 171 countries and territories on how successfully they deliver these goals. Evaluated globally and by country, these ten public goals represent the wide range of benefits that a healthy ocean can provide; each country's overall score is the average of its respective goal scores. The ten socio-ecological objectives are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Coastal Livelihoods
amp; Economies, Tourism
amp; Recreation, Sense of Place, Clean Waters, Biodiversity. The index varies from 0 to 100.

2.1.29.22 Coastal chemical pollution within 3 nm offshore (ohi_pc3)*Long tag:* qog_ei_ohi_pc3*Original tag:* ohi_pc3*Dataset citation:* Povitkina et al. (2021)*Variable citation:* Halpern et al. (2018)*Description:*

Coastal chemical pollution within 3 nautical miles (nm) offshore. For more details on the variable construction, see the original sources:

2.1.29.25 Fertilizer pollution as a proxy for nutrient pollution (ohi_pnutrient)

Long tag: qog_ei_ohi_pnutrient

Original tag: ohi_pnutrient

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Fertilizer pollution as a proxy for nutrient pollution. For more details on the variable construction, see the original sources:

Halpern, B. S. et al. (2015). Spatial and temporal changes in cumulative human impacts on the world's ocean. *Nature Communications* 6(7615).

and

FAO's statistical database FAOSTAT
(http://faostat3.fao.org/faostat-gateway/go/to/browse/R/*E).

When using this variable, please cite both the OHI project and the original source.

2.1.29.26 Trash pollution (ohi_ptrash)

Long tag: qog_ei_ohi_ptrash

Original tag: ohi_ptrash

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Trash pollution. Estimated by the tons of litter per km of beach collected during beach cleanups organized by the Ocean Conservancy's Trash Free Seas Alliance in 96 countries and locations.

For more details on the variable construction, see the original sources:

Eriksen M., Lebreton, L. C. M., Carson, H. S., Thiel, M., Moore, C. J. and Borerro, J. C. (2014). Plastic pollution in the world's oceans: more than 5 trillion plastic pieces weighing over 250,000 tons afloat at sea. PLoS ONE 9:e111913.

and

J. Afferbach et al. (2015). [Methods](https://github.com/OHI Science/ohiprep/tree/master/globalprep/CW_pressure_trash)

2.1.29.27 Alien Species (ohi_saali)

Long tag: qog_ei_ohi_saali

Original tag: ohi_saali

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Alien species are non-indigenous organisms introduced into an ecosystem that is not their native habitat either by accident or intentionally. Measured by total counts of all invasive species according to data from the Global Invasive Species Database (GIRD).

For more details on the variable construction, see the original source:

Molnar, J. L., Gamboa, R. L., Revenga C., Spalding, M. (2008). Assessing the global threat of invasive species to marine biodiversity. *Frontiers in Ecology and the Environment* 6(485).

When using this variable, please cite both the OHI project and the original source.

2.1.29.28 Percent direct employment in tourism (ohi_tjpt)

Long tag: qog_ei_ohi_tjpt

Original tag: ohi_tjpt

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Percent direct employment in tourism. For more details on the variable construction, see the

original source:

World Travel and Tourism Council, WTTC
(<http://www.wttc.org/research/economic-data-search-tool/>)

When using this variable, please cite both the OHI project and the original source.

2.1.29.29 CBD Survey: Tourism (ohi_tour)

Long tag: qog_ei_ohi_tour

Original tag: ohi_tour

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

CBD Survey: Tourism. A resilience measure based on questions 79, 80, and 82 from The Convention on Biological Diversity country questionnaire (Third National Report to the CBD, from 2005).

Question 79: Has your country established mechanisms to assess, monitor and measure the impact of tourism on biodiversity?

- a) No;
- b) No, but mechanisms are under development;
- c) Yes, mechanisms are in place (please specify below);
- d) Yes, existing mechanisms are under review.

Question 80: Has your country provided educational and training programmes to the tourism operators so as to increase their awareness of the impacts of tourism on biodiversity and upgrade the technical capacity at the local level to minimize the impacts?

- a) No;
- b) No, but programmes are under development;
- c) Yes, programmes are in place (please describe below).

Question 82: Does your country provide indigenous and local communities with capacity-building and financial resources to support their participation in tourism policy-making, development planning, product development and management?

- a) No;
- b) No, but relevant programmes are being considered;
- c) Yes, some programmes are in place;
- d) Yes, comprehensive programmes are in place.

For more details on the variable construction, see the original sources:

Convention on Biological Diversity, CBD (<http://www.cbd.int/reports/search/default.shtml>)

When using this variable, please cite both the OHI project and the original source.

2.1.29.30 Sustainability index (ohi_trstust)

Long tag: qog_ei_ohi_trstust

Original tag: ohi_trstust

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

Sustainability index. For more details on the variable construction, see the original source:

World Economic Forum (<http://www.weforum.org/issues/global-competitiveness>)

When using this variable, please cite both the OHI project and the original source.

2.1.29.31 CBD Survey: Water (ohi_water)

Long tag: qog_ei_ohi_water

Original tag: ohi_water

Dataset citation: Povitkina et al. (2021)

Variable citation: Halpern et al. (2018)

Description:

CBD Survey: water. A resilience measure based on question 153(d,f) from The Convention on Biological Diversity country questionnaire (Third National Report to the CBD, from 2005).

Question 153(d,f): Do your country's strategies and action plans include the following:
 d) Instituting improved integrated marine and coastal area management (including catchments management) in order to reduce sediment and nutrient loads into the marine environment;
 f) Improving sewage and other waste treatment?

For more details on the variable construction, see the original source:

Convention on Biological Diversity, CBD (<http://www.cbd.int/reports/search/default.shtml>)

When using this variable, please cite both the OHI project and the original source.

2.1.30 Oil and Gas Data, 1932-2014

Dataset by: Michael L Ross Global dataset of oil and natural gas production, prices, exports, and net exports. These data are based on the best available information about the volume and value of oil and natural gas production in all countries from 1932 to 2014. The volume figures are from the documents listed in the original source; to calculate the total value of production, the author multiplies the volume by the world price for oil or gas. Since these are world prices for a single (benchmark) type of oil/gas, they only approximate the actual price - which varies by country according to the quality, the terms of contracts, the timing of the transactions, and other factors. These figures do not tell how much revenues were collected by governments or companies - only the approximate volume and value of production. Data on oil production from 1946 to 1969, and gas production from 1955 (when it first was reported) to 1969, are from the US Geological Survey Minerals Yearbook, for various years. Link to the original source: <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/ZTPW0Y>

2.1.30.1 Gas exports, billion cubic feet per year (ross_gas_exp)

Long tag: qog_ei_ross_gas_exp

Original tag: ross_gas_exp

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Gas exports, billion cubic feet per year.

2.1.30.2 Net gas exports value, constant 2000 dollars (ross_gas_netexp)

Long tag: qog_ei_ross_gas_netexp

Original tag: ross_gas_netexp

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Net gas exports value, measured in constant 2000 US dollars to adjust for inflation.

2.1.30.3 Net gas exports value per capita, constant 2000 dollars (ross_gas_netexpc)

Long tag: qog_ei_ross_gas_netexpc

Original tag: ross_gas_netexpc

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Net gas exports value per capita, measured in constant 2000 dollars

2.1.30.4 Constant price of gas in 2000 dollar/mboe (ross_gas_price)

Long tag: qog_ei_ross_gas_price

Original tag: ross_gas_price

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Constant price of gas in 2000 dollar/mboe.

2.1.30.5 Gas production, million barrels oil equiv. (ross_gas_prod)

Long tag: qog_ei_ross_gas_prod

Original tag: ross_gas_prod

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Gas production measured in million barrels of oil equivalent.

2.1.30.6 Gas production value in 2000 dollars (ross_gas_value_2000)

Long tag: qog_ei_ross_gas_value_2000

Original tag: ross_gas_value_2000

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Gas production value in 2000 dollars.

2.1.30.7 Gas production value in 2014 dollars (ross_gas_value_2014)

Long tag: qog_ei_ross_gas_value_2014

Original tag: ross_gas_value_2014

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Gas production value in constant 2014 US dollars to adjust for inflation.

2.1.30.8 Oil exports, thousands of barrels per day (ross_oil_exp)

Long tag: qog_ei_ross_oil_exp

Original tag: ross_oil_exp

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Oil exports, thousands of barrels per day.

2.1.30.9 Net oil exports value, constant 2000 dollars (ross_oil_netexp)

Long tag: qog_ei_ross_oil_netexp

Original tag: ross_oil_netexp

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Net oil exports value measured in constant 2000 US dollars to adjust for inflation.

2.1.30.10 Net oil exports value per capita, constant 2000 dollars (ross_oil_netexpc)

Long tag: qog_ei_ross_oil_netexpc

Original tag: ross_oil_netexpc

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Net oil exports value per capita measured in constant 2000 dollars.

2.1.30.11 Constant price of oil in 2000 dollar/brl (ross_oil_price)

Long tag: qog_ei_ross_oil_price

Original tag: ross_oil_price

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Constant price of oil in 2000 dollar/brl.

2.1.30.12 Oil production in metric tons (ross_oil_prod)

Long tag: qog_ei_ross_oil_prod

Original tag: ross_oil_prod

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Oil production in metric tons.

2.1.30.13 Oil production value in 2000 dollars (ross_oil_value_2000)

Long tag: qog_ei_ross_oil_value_2000

Original tag: ross_oil_value_2000

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Oil production value in 2000 dollars.

2.1.30.14 Oil production value in 2014 dollars (ross_oil_value_2014)

Long tag: qog_ei_ross_oil_value_2014

Original tag: ross_oil_value_2014

Dataset citation: Povitkina et al. (2021)

Variable citation: Ross & Mahdavi (2015)

Description:

Oil production value in constant 2014 US dollars to adjust for inflation.

2.1.31 Sustainable Governance Indicators

Dataset by: Bertelsmann Stiftung The Sustainable Governance Indicators (SGI) is a platform built on a cross-national survey of governance that identifies reform needs in 41 EU and OECD countries. SGI explores how governments target sustainable development and advocate for more sustainable governance built on three pillars: 1) Policy Performance; 2) Democracy; and 3) Governance. Link to the original source: <https://www.sgi-network.org/2020/>

2.1.31.1 Environmental Policy Performance Index (sgi_en)

Long tag: qog_ei_sgi_en

Original tag: sgi_en

Dataset citation: Povitkina et al. (2021)

Variable citation: Schiller & Hellmann (2022)

Description:

The index consists of two parts: Environment Index and Global Environmental Protection Index, weighted equally. The variable varies between 0 and 10.

2.1.31.2 Environmental Policy Performance - Environment (sgi_enen)

Long tag: qog_ei_sgi_enen

Original tag: sgi_enen

Dataset citation: Povitkina et al. (2021)

Variable citation: Schiller & Hellmann (2022)

Description:

The Environment index consists of the "Environmental Policy" indicator (50percent), based on expert assessments of environmental policy effectiveness, and nine indicators related to observable environmental performance, including Energy Productivity (5,56percent), Greenhouse Gas Emissions (5,56percent), Particulate Matter (5,56percent), Biocapacity (5,56percent), Waste Generation (5,56percent), Material Recycling (5,56percent), Biodiversity (5,56percent), Renewable Energy (5,56percent), and Material footprint (5,56percent). The index varies from 0 to 10.

2.1.31.3 Environmental Policy Performance - Global Environmental Protection (sgi_enge)

Long tag: qog_ei_sgi_enge

Original tag: sgi_enge

Dataset citation: Povitkina et al. (2021)

Variable citation: Schiller & Hellmann (2022)

Description:

The Global Environmental Protection index consists of "Global Environmental Policy Indicator" (50percent), based on expert assessments of countries' participation in global environmental protection regimes, the rate of participation in Multilateral Environmental Agreements (25percent), and Kyoto Participation and Achievements indicator, measuring to what extent the Kyoto emission reduction targets were met (25percent). The index varies from 0 to 10.

2.1.31.4 Environmental policy effectiveness (sgi_epe)

Long tag: qog_ei_sgi_epe

Original tag: sgi_epe

Dataset citation: Povitkina et al. (2021)

Description:

The indicator measures how effectively a national environmental policy protects and preserves the sustainability of natural resources and the quality of the environment.

Effective environmental policies will help promote and incentivize goal-driven technological progress and environmentally friendly behavior and ensure sufficient resources are allocated for implementation. In assessing the effectiveness of environmental policies, the experts were invited to draw on the following guiding questions:

1. Are environmental policy goals ambitious (i.e., do they target more than improvements to efficiency)?
2. Are environmental policies implemented with tangible impact?
3. Are environmental concerns integrated effectively across relevant policy sectors (i.e., energy, housing, transport, manufacturing industry, research and innovation, tourism, fisheries, agriculture)?

As environmental performance may be issue-specific, the experts were invited to provide a short paragraph for each of the four key targets of protection: resource use (land, water, materials, energy), environmental pollution (water, air, soil), climate and biodiversity protection.

The indicator is based on expert answers to these questions and varies from 0 to 10, where 0-1 is "Environmental concerns have been largely abandoned" and 9-10 is "Environmental policy goals are ambitious and effectively implemented as well as monitored within and across most relevant policy sectors that account for the largest share of resource use and emissions".

2.1.31.5 Participation in global environmental regimes (sgi_ger)

Long tag: qog_ei_sgi_ger

Original tag: sgi_ger

Dataset citation: Povitkina et al. (2021)

Description:

The indicator measures the extent to which governments actively contribute to the design and advancement of global environmental protection regimes.

Protecting the climate and preserving natural resources worldwide depends on effective collective action carried out on a global level. Examples of active contribution include demonstrating initiative and responsibility, acting as an agenda-setter within international frameworks, and/or achieving an alignment of purpose among conflicting interests in international negotiations.

The experts were invited to provide a paragraph addressing the following three aspects:

1. Which issues are treated as global common goods rather than domestic environmental problems (e.g., chemical pollution, biodiversity conservation, forest protection, climate protection, etc.)?
2. Which of these global issues or goals does the government address, and has it formulated and implemented action plans targeting these goals?
3. Are countries targeting the preservation of global common goods by contributing funds either through international facilities or official development assistance?

The indicator is based on the expert answers to these questions and varies from 0 to 10, where 1-2 is "The government does not contribute to international efforts to strengthen global environmental protection regimes" and 9-10 is "The government actively contributes to international efforts to design and advance global environmental protection regimes. In most cases, it demonstrates commitment to existing regimes, contributes to their being advanced and has introduced appropriate reforms".

2.1.32 Stock of Climate Laws and Policies

Dataset by: Eskander and Fankhauser Data on the stock of climate change mitigation laws and policies used in the paper: Eskander, S.M. and Fankhauser, S., 2020. Reduction in greenhouse gas emissions from national climate legislation. *Nature Climate Change*, 10(8), pp.750-756. Mitigation laws and policies refer to a legislative or executive disposition focused on curbing a country's greenhouse gases emissions in one sector or more. Measures can be directly related to emissions reductions, such as laws establishing a national carbon budget or cap and trade system, or indirectly related, such as laws or policies establishing relevant institutions or providing additional funding for research and development into low carbon technologies. Laws and policies addressing forests and land use are included as long as they explicitly support climate change mitigation through activities that reduce emissions and increase carbon removals. General forest management and conservation laws are not included, even if they may have implicit consequences for climate change mitigation. Link to the original source: <https://github.com/smsu1979/Eskander-Fankhauser-NCC-2020->

2.1.32.1 Stock of executive orders/policies on mitigation for the past 3 years (slaws_mit_ex_l3)

Long tag: qog_ei_slaws_mit_ex_l3

Original tag: slaws_mit_ex_l3

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Number of policies addressing climate mitigation that were enacted by the national executive branch for the previous 3 years, rolling. These include presidential decrees, executive orders, or department regulations.

2.1.32.2 Stock of older executive orders/policies on mitigation (slaws_mit_ex_lt)

Long tag: qog_ei_slaws_mit_ex_lt

Original tag: slaws_mit_ex_lt

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Number of policies addressing climate mitigation that were enacted by the national executive branch until three years back, rolling. These policies include presidential decrees, executive orders, or department regulations.

2.1.32.3 Stock of mitigation laws and policies for the past 3 years (slaws_mit_l3)

Long tag: qog_ei_slaws_mit_l3

Original tag: slaws_mit_l3

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Number of laws and policies addressing climate mitigation that were adopted by the national government in the previous 3 years, rolling.

2.1.32.4 Stock of legislative mitigation laws for the past 3 years (slaws_mit_leg_l3)

Long tag: qog_ei_slaws_mit_leg_l3

Original tag: slaws_mit_leg_l3

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Number of laws addressing climate mitigation that were passed by the national legislature in

the previous three years, rolling. Laws are passed by the parliament, congress, or equivalent legislative authority.

2.1.32.5 Stock of older legislative mitigation laws (slaws_mit_leg_lt)

Long tag: qog_ei_slaws_mit_leg_lt

Original tag: slaws_mit_leg_lt

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Total number of laws addressing climate mitigation that were passed by the national legislature until three years back, rolling. Laws are passed by the parliament, congress, or equivalent legislative authority.

2.1.32.6 Stock of older mitigation laws and policies (slaws_mit_lt)

Long tag: qog_ei_slaws_mit_lt

Original tag: slaws_mit_lt

Dataset citation: Povitkina et al. (2021)

Variable citation: Eskander & Fankhauser (2020)

Description:

Total number of laws and policies addressing climate mitigation that were adopted by the national government until three years back, rolling.

2.1.33 V-Party Dataset

Dataset by: Varieties of Democracy (V-Dem) Project V-Party provides expert-coded assessments of party organization and identity for most parties in most countries over 1970-2019. Using V-Dem methodology (Coppedge et al., 2020), in January 2020, 665 experts rated the policy positions and organizational capacity of political parties across elections in a given country. Specifically, as a general rule, experts coded data for all parties that reached more than 5Link to the original source: <https://www.v-dem.net/en/data/data/v-party-dataset/>

2.1.33.1 Environmental parties: share of seats (vparty_envseat)

Long tag: qog_ei_vparty_envseat

Original tag: vparty_envseat

Dataset citation: Povitkina et al. (2021)

Variable citation: Lindberg et al. (2022)

Description:

The variable measures the share of seats in the lower chamber taken by the parties, for which environmental protection is relevant to gain and keep voters, as agreed on by at least half of the coders in the V-Party dataset.

The original variable from V-Party dataset - v2pasalie - measures the share of coders who answered "Environmental protection" to the multiple-choice question "Which of the following issues are most relevant for the party's effort to gain and keep voters?". We only keep parties that score 0.5 or higher on variable v2pasalie_12 and then calculate their share of seats in a given country-year using v2paseatshare variable - Seat share the party gained in the election to the lower chamber.

2.1.33.2 Environmental parties: share of votes (vparty_envvote)

Long tag: qog_ei_vparty_envvote

Original tag: vparty_envvote

Dataset citation: Povitkina et al. (2021)

Variable citation: Lindberg et al. (2022)

Description:

The variable measures the share of votes to the lower chamber received by the parties, for which environmental protection is relevant to gain and keep voters, as agreed on by at least half of the coders in the V-Party dataset.

The original variable from V-Party dataset - v2pasalie - reports the share of coders who answered "Environmental protection" to the multiple-choice question "Which of the following issues are most relevant for the party's effort to gain and keep voters?". We only keep parties that score 0.5 or higher on variable v2pasalie_12 and then calculate their share of votes in a given country-year using v2pavote variable - Vote share the party gained in the election to the lower chamber.

2.1.34 World Development Indicators

Dataset by: The World Bank Group The primary World Bank collection of development indicators, compiled from officially-recognized international sources. This is an adaptation of an original work by The World Bank. Views and opinions expressed in the adaptation are the sole responsibility of the author or authors of the adaptation and are not endorsed by The World Bank. Link to the original source: <http://data.worldbank.org/data-catalog/world-developmentindicators>

2.1.34.1 Agricultural irrigated land (percent of total agricultural land) (wdi_agrland)

Long tag: qog_ei_wdi_agrland

Original tag: wdi_agrland

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Agricultural land refers to the share of land area that is arable, under permanent crops, and under permanent pastures. Arable land includes land defined by the FAO as land under temporary crops (double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded. Land under permanent crops is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber. Permanent pasture is land used for five or more years for forage, including natural and cultivated crops.

2.1.34.2 Arable land (percent of land area) (wdi_araland)

Long tag: qog_ei_wdi_araland

Original tag: wdi_araland

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Arable land includes land defined by the FAO as land under temporary crops (double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded.

2.1.34.3 Land area (sq. km) (wdi_area)

Long tag: qog_ei_wdi_area

Original tag: wdi_area

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Land area is a country's total area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes.

2.1.34.4 Land area where elevation is below 5 meters (percent of total land area) (wdi_areabelow)

Long tag: qog_ei_wdi_areabelow

Original tag: wdi_areabelow

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Land area below 5m is the percentage of total land where the elevation is 5 meters or less.

2.1.34.5 CO2 emissions (metric tons per capita) (wdi_co2)

Long tag: qog_ei_wdi_co2

Original tag: wdi_co2

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Carbon dioxide (CO₂) emissions stem from the burning of fossil fuels and the manufacture of cement. They include carbon dioxide produced during consumption of solid, liquid, and gas fuels and gas flaring.

2.1.34.6 Forest area (percent of land area) (wdi_forest)

Long tag: qog_ei_wdi_forest

Original tag: wdi_forest

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Forest area is land under natural or planted stands of trees of at least 5 meters in situ, whether productive or not, and excludes tree stands in agricultural production systems (for example, in fruit plantations and agroforestry systems) and trees in urban parks and gardens.

2.1.34.7 Fossil fuel energy consumption (percent of total) (wdi_fossil)

Long tag: qog_ei_wdi_fossil

Original tag: wdi_fossil

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Fossil fuel energy consumption as a percentage of total energy consumption. Fossil fuel comprises coal, oil, petroleum, and natural gas products.

2.1.34.8 Internally displaced persons, new displacement-disasters (number) (wdi_idpdis)

Long tag: qog_ei_wdi_idpdis

Original tag: wdi_idpdis

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Internally displaced persons, new displacement associated with disasters (number of people). Internally displaced persons are defined according to the 1998 Guiding Principles (<http://www.internal-displacement.org/publications/1998/ocha-guiding-principles-on-internal-displacement>) as people or groups of people who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of armed conflict, or to avoid the effects of armed conflict, situations of generalized violence, violations of human rights, or natural or human-made disasters and who have not crossed an international border. “New Displacement” refers to the number of new cases or incidents of displacement recorded, rather than the number of people displaced. This is done because people may have been displaced more than once.

2.1.34.9 Policy and institutions for environmental sustainability (wdi_piesr)

Long tag: qog_ei_wdi_piesr

Original tag: wdi_piesr

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Policy and institutions for environmental sustainability measures the extent to which environmental policies foster the protection and sustainable use of natural resources and the management of pollution. The indicator ranges from 1 (low) to 6 (high).

2.1.34.10 Average precipitation in depth (mm per year) (wdi_precip)

Long tag: qog_ei_wdi_precip

Original tag: wdi_precip

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Average precipitation is the long-term average in depth (over space and time) of annual precipitation in the country in millimeters (mm). Precipitation is defined as any kind of water that falls from clouds as a liquid or a solid.

2.1.34.11 Terrestrial protected areas (percent of total land area) (wdi_tpa)

Long tag: qog_ei_wdi_tpa

Original tag: wdi_tpa

Dataset citation: Povitkina et al. (2021)

Variable citation: World Bank (2022)

Description:

Terrestrial protected areas are totally or partially protected areas of at least 1,000 hectares that are designated by national authorities as scientific reserves with limited public access, national parks, natural monuments, nature reserves or wildlife sanctuaries, protected landscapes, and areas managed mainly for sustainable use. Marine areas, unclassified areas, littoral (intertidal) areas, and sites protected under local or provincial law are excluded. World Database on Protected Areas (WDPA) where the compilation and management is carried out by United Nations Environment World Conservation Monitoring Centre (UNEP-WCMC) in collaboration with governments, non-governmental organizations, academia, and industry. The data are available online through the Protected Planet website (<https://www.protectedplanet.net/>).

2.1.35 World Values Survey

Dataset by: World Values Survey The World Values Survey is a global network of social scientists studying changing values and their impact on social and political life, led by an international team of scholars, with the WVS association and secretariat headquartered in Stockholm, Sweden. The European Values Study started in 1981 when a thousand citizens in the European Member States

of that time were interviewed using standardized questionnaires. Every nine years, the survey is repeated in a variable number of countries. The fourth wave in 2008 covers no less than 47 European countries/regions, from Iceland to Georgia and from Portugal to Norway. EVS is cooperating with WVS for the data collection in Europe and both datasets can be integrated. The variables are country averages calculated using the population weight provided by WVS/EVS. Link to the original source: <http://www.worldvaluessurvey.org/>

2.1.35.1 Active memberships in environmental organizations (percent) (wvs_ameop)

Long tag: qog_ei_wvs_ameop

Original tag: wvs_ameop

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of respondents mentioning they are active members in an environmental organization in the question: "Now I am going to read out a list of voluntary organizations; for each one, could you tell me whether you are a member, an active member, an inactive member, or not a member of that type of organization?". A higher score means that more people are active members of environmental organizations. A lower score means that fewer people are active members of environmental organizations.

2.1.35.2 Confidence in environmental organizations (mean) (wvs_ceom)

Long tag: qog_ei_wvs_ceom

Original tag: wvs_ceom

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Average reply to the question: "I am going to name a number of organizations. For each one, could you tell me how much confidence you have in them: is it a great deal of confidence, quite a lot of confidence, not very much confidence, or none at all? - Environmental organizations".

- 1) A great deal;
- 2) Quite a lot;
- 3) Not very much;
- 4) None at all.

Answers "Don't know" and "No answer" are deleted. The higher the score, the lower the confidence in environmental organizations.

2.1.35.3 Donations to ecological organizations (percent) (wvs_deop)

Long tag: qog_ei_wvs_deop

Original tag: wvs_deop

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of "yes"-replies to the question: "During the past two years, have you given money to an ecological organization?". A higher score means that more people have donated money to environmental organizations. A lower score means that fewer people have donated money to environmental organizations.

2.1.35.4 Protecting environment vs economic growth (percent) (wvs_epmip)

Long tag: qog_ei_wvs_epmip

Original tag: wvs_epmip

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of replies mentioning "Protecting the environment should be given priority"; to the question: "Here are two statements people sometimes make when discussing the environment and economic growth. Which of them comes closer to your own point of view?"

A. Protecting the environment should be given priority, even if it causes slower economic growth and some loss of jobs

B. Economic growth and creating jobs should be the top priority, even if the environment suffers to some extent;

A higher score means that more people prioritize the environment over economic growth and jobs. A lower score means that more people prioritize economic growth and jobs over the environment.

2.1.35.5 Environment is the most serious problem (percent) (wvs_epmpp)

Long tag: qog_ei_wvs_epmpp

Original tag: wvs_epmpp

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of replies mentioning "Environmental pollution"; to the question: "I'm going to read out some problems. Please indicate which of the following problems you consider the most serious one for the world as a whole?";. A higher score means that more people prioritize the environment over other serious world problems. A lower score means that fewer people prioritize the environment over other serious world problems.

2.1.35.6 Inactive memberships in environmental organizations (percent) (wvs_imeop)

Long tag: qog_ei_wvs_imeop

Original tag: wvs_imeop

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of respondents mentioning they are inactive members in an environmental organization in the question: "Now I am going to read out a list of voluntary organizations; for each one, could you tell me whether you are a member, an active member, an inactive member, or not a member of that type of organization?";. A higher score means that there are more inactive members in environmental organizations among the general population. A lower score implies that there are fewer inactive members in environmental organizations among the general population.

2.1.35.7 Participation in environmental protests (percent) (wvs_pedp)

Long tag: qog_ei_wvs_pedp

Original tag: wvs_pedp

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Percent of "yes"-replies to the question: "During the past two years, have you participated in a demonstration for some environmental cause?";. A higher

score means that there are more people who have participated in environmental protests. A lower score means that there are fewer people who have participated in environmental protests.

2.1.35.8 Important to look after the environment (mean) (wvs_ploem)

Long tag: qog_ei_wvs_ploem

Original tag: wvs_ploem

Dataset citation: Povitkina et al. (2021)

Variable citation: EVS (2020)

Description:

Average reply to the question: "Now I will briefly describe some people. Using this card, would you please indicate for each description whether that person is very much like you, like you, somewhat like you, not like you, or not at all like you? - Looking after the environment is important to this person; to care for nature and save life resources";

- 1) Very much like me;
- 2) Like me;
- 3) Somewhat like me;
- 4) A little like me;
- 5) Not like me;
- 6) Not at all like me.

Answers "Don't know" and "No answer" are deleted. A higher score means that fewer people believe that it is important to look after the environment. A lower score means that more people believe that it is important to look after the environment.

2.2 QoG EQI Regional Level 2021 (with all NUTS2 regions)

Dataset tag: qog_eqi_agg21

Output Unit: QoG NUTS2 Region, i.e., data is collected per NUTS2 region. That means there is one row for each region in the dataset. The unit is expressed through the column `region_code` but can also be expressed through the column name.

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are impartially allocated and of good quality in the EU.

Dataset citation: Charron, Nicholas, Victor Lapuente, Monika Bauhr. 2021. Sub-national Quality of Government in EU Member States: Presenting the 2021 European Quality of Government Index and its relationship with Covid-19 indicators. University of Gothenburg: The QoG Working Paper Series 2021:4.

Link to original codebook

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust

their license without previous warning.

More detailed information on the dataset can be found at the following web page:
<https://www.gu.se/en/quality-government/qog-data/data-downloads/european-quality-of-government-index>

2.2.1 Identification Variables

These variables identify the observations in the dataset.

2.2.1.1 NUTS code of region (region_code)

Long tag: qog_eqi_agg21_region_code

Original tag: region_code

Dataset citation: Charron et al. (2021)

Description:

Numerical code of the region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. See appendix of this document for each region's code.

2.2.1.2 Name of region (name)

Long tag: qog_eqi_agg21_name

Original tag: name

Dataset citation: Charron et al. (2021)

Description:

Name of the region in English.

2.2.1.3 Year (year)

Long tag: qog_eqi_agg21_year

Original tag: year

Dataset citation: Charron et al. (2021)

Description:

Year of observation. If you are using data from previous waves (2010, 2013 and 2017), please also check "Suggestion Citation for Previous Waves";

2.2.1.4 EQI region code (eqiregionn2)

Long tag: qog_eqi_agg21_eqiregionn2

Original tag: EQIregionN2

Dataset citation: Charron et al. (2021)

Description:

EQI region code (NUTS 2) . See appendix of *THE EUROPEAN QUALITY OF GOVERNMENT INDEX 2021* for each region's code. https://www.qogdata.pol.gu.se/data/qog_eqi_codebook_21.pdf

2.2.1.5 NUTS Level (nuts_level)

Long tag: qog_eqi_agg21_nuts_level

Original tag: nuts_level

Dataset citation: Charron et al. (2021)

Description:

To what level of NUTS belong observation. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

- (0) Country level
- (1) Major socio-economic regions
- (2) Basic regions for the application of regional policies

2.2.1.6 NUTS0 abbreviation code (nuts0)

Long tag: qog_eqi_agg21_nuts0

Original tag: nuts0

Dataset citation: Charron et al. (2021)

Description:

Code of NUTS0 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 0: country level.

2.2.1.7 NUTS1 abbreviation code (nuts1)

Long tag: qog_eqi_agg21_nuts1

Original tag: nuts1

Dataset citation: Charron et al. (2021)

Description:

Code of NUTS1 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions.

2.2.1.8 NUTS2 abbreviation code (nuts2)

Long tag: qog_eqi_agg21_nuts2

Original tag: nuts2

Dataset citation: Charron et al. (2021)

Description:

Code of NUTS2 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 2: basic regions for the application of regional policies.

2.2.1.9 Name of the country (cname)

Long tag: qog_eqi_agg21_cname

Original tag: cname

Dataset citation: Charron et al. (2021)

Description:

Name of the country where the region is located, in English.

2.2.2 Regional Level Variables

EQI variables for the regional level.

2.2.2.1 Nuts 2 Level (eqi21_n2)

Long tag: qog_eqi_agg21_eqi21_n2

Original tag: eqi21_n2

Dataset citation: Charron et al. (2021)

Description:

2.2.2.2 Lower boundary of margin of error, EQI (eqi21_n2_lowme)

Long tag: qog_eqi_agg21_eqi21_n2_lowme

Original tag: eqi21_n2_lowME

Dataset citation: Charron et al. (2021)

Description:

Lower boundary of margin of error for EQI score.

2.2.2.3 Upper boundary of margin of error, EQI (eqi21_n2_highme)

Long tag: qog_eqi_agg21_eqi21_n2_highme

Original tag: eqi21_n2_highME

Dataset citation: Charron et al. (2021)

Description:

Upper boundary of margin of error for EQI score.

2.2.2.4 Quality pillar (qualityp21_n2)

Long tag: qog_eqi_agg21_qualityp21_n2

Original tag: qualityp21_n2

Dataset citation: Charron et al. (2021)

Description:

Quality pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.2.2.5 Impartiality pillar (impartialityp21_n2)

Long tag: qog_eqi_agg21_impartialityp21_n2

Original tag: impartialityp21_n2

Dataset citation: Charron et al. (2021)

Description:

Impartiality pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.2.2.6 Corruption pillar (corruptionp21_n2)

Long tag: qog_eqi_agg21_corruptionp21_n2

Original tag: corruptionp21_n2

Dataset citation: Charron et al. (2021)

Description:

Corruption pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.3 QoG European Quality of Government Index CATI - Country Level (2021)

Dataset tag: qog_eqi_cati_long

Output Unit: QoG Country-Year, i.e., data is collected per country and year. That means there is one row for each combination of country and year in the dataset. This unit is identified using the cname column and the year column.

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are impartially allocated and of good quality in the EU.

Dataset citation: Charron, Nicholas, Victor Lapuente, and Monika Bauhr. 2021. Sub-national Quality of Government in EU Member States: Presenting the 2021 European Quality of Government Index and its relationship with Covid-19 indicators. University of Gothenburg: The QoG Working Paper Series 2021:4.

2.3.1 Identification Variables

These variables identify the observations in the dataset.

2.3.1.1 Name of the country (cname)

Long tag: qog_eqi_cati_long_cname

Original tag: cname

Dataset citation: Charron et al. (2012)

Description:

Name of the country where the region is located in English.

2.3.1.2 Year (year)

Long tag: qog_eqi_cati_long_year

Original tag: year

Dataset citation: Charron et al. (2012)

Description:

Year of observation. If you are using data from previous waves (2010, 2013 and 2017), please

also

check `qog_eqi_cati_long_` variables for previous waves.

2.3.1.3 Country Code (ccode)

Long tag: `qog_eqi_cati_long_ccode`

Original tag: `ccode`

Dataset citation: Charron et al. (2012)

Description:

Numeric country code based on the ISO-3166-1 standard. All the numeric country codes are unique and this is thus the variable best suitable to use when merging files (in combination with year for time-series data). (http://en.wikipedia.org/wiki/ISO_3166-1_numeric)

2.3.1.4 3-letter Country Code (ccodealp)

Long tag: `qog_eqi_cati_long_ccodealp`

Original tag: `ccodealp`

Dataset citation: Charron et al. (2012)

Description:

A three-letter country code based on the ISO-3166-1 alpha3 standard. Please note that the `ccodealp` variable does not uniquely identify all countries.

2.3.1.5 Country Code COW (ccodecow)

Long tag: `qog_eqi_cati_long_ccodecow`

Original tag: `ccodecow`

Dataset citation: Charron et al. (2012)

Description:

Country code from the Correlates of War.

2.3.1.6 Country Code World Bank (ccodewb)

Long tag: `qog_eqi_cati_long_ccodewb`

Original tag: `ccodewb`

Dataset citation: Charron et al. (2012)

Description:

Country code from the World Bank.

2.3.2 Country Level Variables

EQI variables for the country level.

2.3.2.1 How would you rate the quality of public education in your area? (ed_qual)

Long tag: `qog_eqi_cati_long_ed_qual`

Original tag: `Ed_qual`

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.3.2.2 How would you rate the quality of the public health care system in your area? (hel_qual)

Long tag: `qog_eqi_cati_long_hel_qual`

Original tag: `Hel_qual`

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.3.2.3 How would you rate the quality of the police force in your area? (law_qual)

Long tag: qog_eqi_cati_long_law_qual

Original tag: Law_qual

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.3.2.4 Certain people are given special advantages in the public education system in my area. (edimpart1)

Long tag: qog_eqi_cati_long_edimpart1

Original tag: Edimpart1

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.5 Certain people are given special advantages in the public health care system in my area. (helimpart1)

Long tag: qog_eqi_cati_long_helimpart1

Original tag: Helimpart1

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.6 The police force gives special advantages to certain people in my area. (lawimpart1)

Long tag: qog_eqi_cati_long_lawimpart1

Original tag: Lawimpart1

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.7 All citizens are treated equally in the public education system in my area. (edimpart2)

Long tag: qog_eqi_cati_long_edimpart2

Original tag: Edimpart2

Dataset citation: Charron et al. (2012)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.3.2.8 All citizens are treated equally in the public health care system in my area. (helimpart2)

Long tag: qog_eqi_cati_long_helimpart2

Original tag: Helimpart2

Dataset citation: Charron et al. (2012)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.3.2.9 All citizens are treated equally by the police force in my area. (lawimpart2)

Long tag: qog_eqi_cati_long_lawimpart2

Original tag: Lawimpart2

Dataset citation: Charron et al. (2012)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.3.2.10 Corruption is prevalent in my area's local public school system. (edcorr)

Long tag: qog_eqi_cati_long_edcorr

Original tag: EdCorr

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.11 Corruption is prevalent in the public health care system in my area. (helcorr)

Long tag: qog_eqi_cati_long_helcorr

Original tag: HelCorr

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.12 Corruption is prevalent in the police force in my area. (lawcorr)

Long tag: qog_eqi_cati_long_lawcorr

Original tag: LawCorr

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.13 People in my area must use some form of corruption to just to get some basic public services. (need_cor)

Long tag: qog_eqi_cati_long_need_cor

Original tag: Need_cor

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.14 Corruption in my area is used to get access to special unfair privileges and wealth. (greed_cor)*Long tag:* qog_eqi_cati_long_greed_cor*Original tag:* Greed_cor*Dataset citation:* Charron et al. (2012)*Description:*

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.3.2.15 In the last 12 months, have you or anyone in your family given an informal gift or bribe to schools or other education services? (ed_pay)*Long tag:* qog_eqi_cati_long_ed_pay*Original tag:* Ed_pay*Dataset citation:* Charron et al. (2012)*Description:*

Share of population who said "Yes" to above-stated question (q19_1 of individual-level dataset).

2.3.2.16 In the last 12 months, have you or anyone in your family given an informal gift or bribe to health or medical services? (hel_pay)*Long tag:* qog_eqi_cati_long_hel_pay*Original tag:* Hel_pay*Dataset citation:* Charron et al. (2012)*Description:*

Share of population who said "Yes" to above-stated question (q19_2 of individual-level dataset).

2.3.2.17 In the last 12 months, have you or anyone in your family given an informal gift or bribe to police? (law_pay)*Long tag:* qog_eqi_cati_long_law_pay*Original tag:* Law_pay*Dataset citation:* Charron et al. (2012)*Description:*

Share of population who said "Yes" to above-stated question (q19_3 of individual-level dataset).

2.3.2.18 In the last 12 months, have you or anyone in your family given an informal gift or bribe to any other government-run agency? (other_pay)*Long tag:* qog_eqi_cati_long_other_pay*Original tag:* Other_pay*Dataset citation:* Charron et al. (2012)*Description:*

Share of population who said "Yes" to above-stated question (q19_4 of individual-level dataset).

2.3.2.19 Give an informal gift or bribe at any public agency in the last 12 months (any_bribe)*Long tag:* qog_eqi_cati_long_any_bribe*Original tag:* Any_bribe*Dataset citation:* Charron et al. (2012)*Description:*

Share of population who have been asked by a public official to give an informal gift or bribe

at any public agency in the last 12 months. For this variable, each respondent answered 'yes' to any of the 4 services above (*Ed_pay*, *Hel_pay*, *Law_pay*, *Other_pay*) is coded as '1', and '0' if otherwise.

2.3.2.20 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in health or medical services? (ed_ask)

Long tag: qog_eqi_cati_long_ed_ask

Original tag: Ed_ask

Dataset citation: Charron et al. (2012)

Description:

Share of population who said "Yes" to above-stated question (q18_1 of individual-level dataset)

2.3.2.21 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in health or medical services? (hel_ask)

Long tag: qog_eqi_cati_long_hel_ask

Original tag: Hel_ask

Dataset citation: Charron et al. (2012)

Description:

Share of population who said "Yes" to above-stated question (q18_2 of individual-level dataset).

2.3.2.22 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in police authorities? (law_ask)

Long tag: qog_eqi_cati_long_law_ask

Original tag: Law_ask

Dataset citation: Charron et al. (2012)

Description:

Share of population who said "Yes" to above-stated question (q18_3 of individual-level dataset).

2.3.2.23 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in any other government-run agency? (other_ask)

Long tag: qog_eqi_cati_long_other_ask

Original tag: Other_ask

Dataset citation: Charron et al. (2012)

Description:

Share of population who said "Yes" to above-stated question (q18_4 of individual-level dataset).

2.3.2.24 Asked by a public official to give an informal gift or bribe at any public agency in the last 12 months (ask_any)

Long tag: qog_eqi_cati_long_ask_any

Original tag: Ask_Any

Dataset citation: Charron et al. (2012)

Description:

Share of population who have been asked by a public official to give an informal gift or bribe at any public agency in the last 12 months. For this variable, each respondent answered 'yes' to any

of the 4 services above (*Ed_ask*, *Hel_ask*, *Law_ask*, *Other_ask*) is coded as '1', and '0' if otherwise.

2.3.2.25 In the area where I live, elections are conducted freely and fairly. (elec_not_free)

Long tag: qog_eqi_cati_long_elec_not_free

Original tag: elec_not_free

Dataset citation: Charron et al. (2012)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.3.2.26 On a 1 to 10 scale, with '1' being 'no confidence at all', and '10' being 'complete confidence' to do the right thing, how much confidence do you personally have in (COUNTRY's) parliament? (parl_conf)

Long tag: qog_eqi_cati_long_parl_conf

Original tag: Parl_conf

Dataset citation: Charron et al. (2012)

Description:

On a scale from 1 to 10, where 1 means "No confidence at all" and 10 means "Complete Confidence".

2.4 QoG European Quality of Government Index Individual Level (2010 & 2013)

Dataset tag: qog_eqi_ind_1013

Output Unit: QoG EQI Respondent ID 2010-13, i.e., data is collected per respondent in this survey round. That means each row in the dataset can be identified by the respondent ID, using the resp_id column (after removing six rows with missing respondent ids as suggested by QoG)

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are impartially allocated and of good quality in the EU.

Dataset citation: Charron, N., Dijkstra, L., Lapuente, V. (2015). Mapping the regional divide in Europe: A measure for assessing quality of government in 206 European regions. *Social Indicators Research*, 122(2), 315-346.

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust their license without previous warning.

More detailed information on the dataset can be found at the following web page:

<https://www.gu.se/en/quality-government/qog-data/data-downloads/european-quality-of-government-index>

2.4.1 Identification Variables

These variables identify the observations in the dataset.

2.4.1.1 Respondent ID (2013) (id)

Long tag: qog_eqi_ind_1013_id

Original tag: id

Dataset citation: Charron et al. (2014)

Description:

A unique identification number given each respondent for the 2013 survey.

2.4.1.2 Respondent ID (2010 and 2013) (resp_id)

Long tag: qog_eqi_ind_1013_resp_id

Original tag: resp_id

Dataset citation: Charron et al. (2014)

Description:

A unique identification number given each respondent in the combined dataset of 2010 & 2013 EQI.

2.4.1.3 Year (year)

Long tag: qog_eqi_ind_1013_year

Original tag: year

Dataset citation: Charron et al. (2014)

Description:

The year to which the observation belong (2010 or 2013 EQI).

2.4.1.4 Country of respondents (country)

Long tag: qog_eqi_ind_1013_country

Original tag: country

Dataset citation: Charron et al. (2014)

Description:

Unique country code, numeric.

NUTS abbreviation Code

1. France
2. Bulgaria
3. Portugal
4. Denmark
5. Sweden
6. Belgium
7. Croatia
8. Greece
9. Germany
10. Italy
11. Spain
12. UK
13. Hungary
14. Czech Republic
15. Slovakia
16. Romania
17. Austria

18. Netherlands
19. Poland
20. Finland
21. Ireland
22. Turkey
23. Serbia
24. Ukraine
25. Kosovo

2.4.1.5 NUTS abbreviation Code (nuts)

Long tag: qog_eqi_ind_1013_nuts

Original tag: nuts

Dataset citation: Charron et al. (2014)

Description:

Abbreviation code of both NUTS1 and NUTS2-level region to which the observation belong. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions, NUTS 2: basic regions for the application of regional policies.

2.4.1.6 Name of NUTS Region (nuts_name)

Long tag: qog_eqi_ind_1013_nuts_name

Original tag: nuts_name

Dataset citation: Charron et al. (2014)

Description:

Full name of NUTS1 and NUTS2-level region to which the observation belong.

2.4.1.7 Numeric NUTS code found in the QoG Regional data (nuts_c)

Long tag: qog_eqi_ind_1013_nuts_c

Original tag: nuts_c

Dataset citation: Charron et al. (2014)

Description:

Numerical code of the region to which the observation belong. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. See appendix of this document for each region's code.

2.4.1.8 Language of interview (language)

Long tag: qog_eqi_ind_1013_language

Original tag: language

Dataset citation: Charron et al. (2014)

Description:

The language in which the interview was conducted.

1. French
2. Bulgarian
3. Portuguese
4. Danish
5. Swedish
6. Flemish
7. Croatian
8. Greek
9. German
10. Italian
11. Spanish
12. English

13. Hungarian
14. Czech
15. Slovak
16. Romanian
17. Austrian
18. Dutch
19. Polish
20. Finnish
21. Irish
22. Turkish
23. Serbian
24. Albanian
25. Ukrainian

2.4.1.9 Type of interview (typetel)

Long tag: qog_eqi_ind_1013_typedtel

Original tag: typedtel

Dataset citation: Charron et al. (2014)

Description:

whether mobile or landline was used in the interview.

1. Landline
2. Mobil Phone

2.4.2 Survey Questions

Survey Question included in the QoG EQI Survey

2.4.2.1 q1 - Have you or any of your immediate family been enrolled or employed in the public school system in your area in the past 12 months? (q1)

Long tag: qog_eqi_ind_1013_q1

Original tag: q1

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.2 q2 - In the past 12 months have you used public health care services in your area? (q2)

Long tag: qog_eqi_ind_1013_q2

Original tag: q2

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.3 q3 - Have you had any recent contact (positive or negative) with the security or police forces in your area in the past 12 months? (q3)

Long tag: qog_eqi_ind_1013_q3

Original tag: q3

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.4 q4 - How would you rate the quality of public education in your area? (q4)*Long tag:* qog_eqi_ind_1013_q4*Original tag:* q4*Dataset citation:* Charron et al. (2014)*Description:*

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.4.2.5 q5 - How would you rate the quality of the public health care system in your area? (q5)*Long tag:* qog_eqi_ind_1013_q5*Original tag:* q5*Dataset citation:* Charron et al. (2014)*Description:*

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.4.2.6 q6 - How would you rate the quality of the police force in your area? (q6)*Long tag:* qog_eqi_ind_1013_q6*Original tag:* q6*Dataset citation:* Charron et al. (2014)*Description:*

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.4.2.7 q7 - Certain people are given special advantages in the public education system in my area. (q7)*Long tag:* qog_eqi_ind_1013_q7*Original tag:* q7*Dataset citation:* Charron et al. (2014)*Description:*

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.8 q8 - Certain people are given special advantages in the public health care system in my area. (q8)*Long tag:* qog_eqi_ind_1013_q8*Original tag:* q8*Dataset citation:* Charron et al. (2014)*Description:*

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.9 q9 - The police force gives special advantages to certain people in my area. (q9)*Long tag:* qog_eqi_ind_1013_q9*Original tag:* q9*Dataset citation:* Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.10 q10 - All citizens are treated equally in the public education system in my area. (q10)

Long tag: qog_eqi_ind_1013_q10

Original tag: q10

Dataset citation: Charron et al. (2014)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.4.2.11 q11 - All citizens are treated equally in the public health care system in my area. (q11)

Long tag: qog_eqi_ind_1013_q11

Original tag: q11

Dataset citation: Charron et al. (2014)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.4.2.12 q12 - All citizens are treated equally by the police force in my area. (q12)

Long tag: qog_eqi_ind_1013_q12

Original tag: q12

Dataset citation: Charron et al. (2014)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.4.2.13 q13 - Corruption is prevalent in my area's local public school system. (q13)

Long tag: qog_eqi_ind_1013_q13

Original tag: q13

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.14 q14 - Corruption is prevalent in the public health care system in my area. (q14)

Long tag: qog_eqi_ind_1013_q14

Original tag: q14

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.15 q15 - Corruption is prevalent in the police force in my area. (q15)

Long tag: qog_eqi_ind_1013_q15

Original tag: q15

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.4.2.16 q16_1 - In the past 12 months have you or anyone living in your household paid a bribe in any form to education services? (q16_1)

Long tag: qog_eqi_ind_1013_q16_1

Original tag: q16_1

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.17 q16_2 - In the past 12 months have you or anyone living in your household paid a bribe in any form to health or medical services? (q16_2)

Long tag: qog_eqi_ind_1013_q16_2

Original tag: q16_2

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.18 q16_3 - In the past 12 months have you or anyone living in your household paid a bribe in any form to police? (q16_3)

Long tag: qog_eqi_ind_1013_q16_3

Original tag: q16_3

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.19 q16_4 - In the past 12 months have you or anyone living in your household paid a bribe in any form to any other government-run agency? (q16_4)

Long tag: qog_eqi_ind_1013_q16_4

Original tag: q16_4

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.20 q17 - In your opinion, how often do you think other citizens in your area use bribery to obtain public services? (q17)

Long tag: qog_eqi_ind_1013_q17

Original tag: q17

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means “Strongly disagree” and 10 means “Strongly agree”.

2.4.2.21 q18 - Please respond to the following: Corruption is NOT present in elections in my area. (q18)

Long tag: qog_eqi_ind_1013_q18

Original tag: q18

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means “Strongly disagree” and 10 means “Strongly agree”.

2.4.2.22 q19 - I trust the information provided by the local mass media in reporting on matters of politics and public services in my area. (q19)

Long tag: qog_eqi_ind_1013_q19

Original tag: q19

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 10, where 1 means “Extremely unlikely” and 10 means “Extremely likely”.

Note: In EQI 2010, the same question is asked as following: “In your opinion, if corruption by a public employee or politician were to occur in your area, how likely is it that such corruption would be exposed by the local mass media?”

2.4.2.23 q20 - Generally speaking, would you say that most people can be trusted or that you can’t be too careful in dealing with people in your area? [2013 ONLY] (q20)

Long tag: qog_eqi_ind_1013_q20

Original tag: q20

Dataset citation: Charron et al. (2014)

Description:

- (1) Most people can be trusted
- (2) Can’t be too careful
- (99) Don’t know/Refused

2.4.2.24 q21a - Which statement comes closer to your own views? “In business most people can succeed if they are willing to work hard” (1) or “Hard work is no guarantee of success in business for most people, it’s more a matter of luck and connections” (10). [2013 ONLY] (q21a)

Long tag: qog_eqi_ind_1013_q21a

Original tag: q21a

Dataset citation: Charron et al. (2014)

Description:

“Don’t know/Refused” is coded as 99.

On a scale from 1 to 10, where 1 means “Success with hard work” and 10 means “Luck and Connections”.

2.4.2.25 q21b - Which statement comes closer to your own views? “In the public sector most people can succeed if they are willing to work hard” (1) or “Hard work is no guarantee of success in the public sector for most people— it’s more a matter of luck and connections” (10). [2013 ONLY] (q21b)

Long tag: qog_eqi_ind_1013_q21b

Original tag: q21b

Dataset citation: Charron et al. (2014)

Description:

quot;Don't know/Refusedquot; is coded as 99.

On a scale from 1 to 10, where 1 means quot;Success with hard workquot; and 10 means quot;Luck and Connectionsquot;.

2.4.2.26 q22 - How would you judge the current state of the economy in (YOUR COUN- TRY)? (q22)

Long tag: qog_eqi_ind_1013_q22

Original tag: q22

Dataset citation: Charron et al. (2014)

Description:

- (1) Very good
- (2) Somewhat good
- (3) Somewhat bad
- (4) Very bad

2.4.2.27 q23 - In politics, people sometimes talk of quot;leftquot; and quot;rightquot;. Where would you place yourself on a scale from 1 to 7, where '1' means the extreme left and '7' means the extreme right? [2013 ONLY] (q23)

Long tag: qog_eqi_ind_1013_q23

Original tag: q23

Dataset citation: Charron et al. (2014)

Description:

On a scale from 1 to 7, where 1 means quot;Extreme leftquot; and 7 means quot;Extreme rightquot;.

2.4.2.28 q24 - What political party would you vote for if the national parliamentary election were today? [2013 ONLY] (q24)

Long tag: qog_eqi_ind_1013_q24

Original tag: q24

Dataset citation: Charron et al. (2014)

Description:

Each respondent hears a pre-coded list of all actual political parties, including an "other" (not speci- fied) and a "don't know/refusedquot;.

2.4.2.29 q25 – Now imagine that your preferred party was involved in a corruption scandal where party leaders had given high level jobs to their unqualified friends and family, which of the following would be most likely? [2013 ONLY] (q25)

Long tag: qog_eqi_ind_1013_q25

Original tag: q25

Dataset citation: Charron et al. (2014)

Description:

- (1) Still vote for preferred party
- (2) Vote for another established party not involved in the corruption scandal
- (3) Not vote at all
- (99) Don't know/Refused

2.4.2.30 q26 - Is your first language (mother tongue) the same as the official language in your region? (q26)

Long tag: qog_eqi_ind_1013_q26

Original tag: q26

Dataset citation: Charron et al. (2014)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.4.2.31 service_exp (service_exp)

Long tag: qog_eqi_ind_1013_service_exp

Original tag: Service_Exp

Dataset citation: Charron et al. (2014)

Description:

Public service experience

- (0) Respondent has not had direct contact with any other public services in question (q1, q2 and/or q3)
- (1) Respondent has had direct contact with any other public services in question (q1, q2 and/or q3)

2.4.3 Demographic Variables

Variables in this section provide demographic information about the respondent.

2.4.3.1 d1 - Gender of respondent (d1)

Long tag: qog_eqi_ind_1013_d1

Original tag: d1

Dataset citation: Charron et al. (2014)

Description:

- (1) Male
- (2) Female

2.4.3.2 d2 - Education of respondent (d2)

Long tag: qog_eqi_ind_1013_d2

Original tag: d2

Dataset citation: Charron et al. (2014)

Description:

- (1) Elementary (primary) school or less (no diploma)
- (2) High (secondary) school (but did not graduated from it)
- (3) Graduation from high (secondary) school
- (4) Graduation from college, university or other third-level institute
- (5) Post-graduate degree (Masters, PHD) beyond your initial college degree
- (99) Don't know/Refused

2.4.3.3 d3 - Age of respondent (d3)

Long tag: qog_eqi_ind_1013_d3

Original tag: d3

Dataset citation: Charron et al. (2014)

Description:

quot;Don't know/refusedquot; is coded as 999.

2.4.3.4 rd3 - Age of respondent (recoded categories) (rd3)

Long tag: qog_eqi_ind_1013_rd3

Original tag: rd3

Dataset citation: Charron et al. (2014)

Description:

- (1) 18-29
- (2) 30-49
- (3) 50-64
- (4) 65+
- (99) Don't know/Refused

2.4.3.5 d4 - Household income (d4)

Long tag: qog_eqi_ind_1013_d4

Original tag: d4

Dataset citation: Charron et al. (2014)

Description:

Total household net income per month, after taxes. Stated in Euros (€). "Don't know/Refused" is coded as 99.

2.4.3.6 rd4 - recoded d4 in local currency (rd4)

Long tag: qog_eqi_ind_1013_rd4

Original tag: rd4

Dataset citation: Charron et al. (2014)

Description:

Total household net income per month, after taxes. Stated in local currency. "Don't know/Refused" is coded as 999.

2.4.3.7 recoded4 – categorical re-code of rd4 income, country specific (recoded4)

Long tag: qog_eqi_ind_1013_recoded4

Original tag: recoded4

Dataset citation: Charron et al. (2014)

Description:

- (1) Low
- (2) Medium
- (3) High
- (99) Don't know/Refused

2.4.3.8 d5 - Occupation by sector (d5)

Long tag: qog_eqi_ind_1013_d5

Original tag: d5

Dataset citation: Charron et al. (2014)

Description:

As far as your current occupation is concerned, would you say you work in the public sector (a public sector organization is either wholly owned by the public authorities or they have a majority share), the private sector or would you say that you are without a professional activity?

2.3.9

d5bis - Occupation

If d5a=1

- (1) Military, soldier (6)
- (2) Law enforcement, police, fire-fighter
- (1) Public sector
- (2) Private sector
- (3) Without professional employment (99) Don't know/Refused

2.4.3.9 d5bis - Occupation (d5bis)

Long tag: qog_eqi_ind_1013_d5bis

Original tag: d5bis

Dataset citation: Charron et al. (2014)

Description:

Occupation

If d5a=1

- (1) Military, soldier
- (2) Law enforcement, police, fire-fighter
- (3) Healthcare worker, doctor
- (4) Teacher, academic, researcher
- (5) Other government agency
- (99) Don't know/Refused

If d5a=2:

- (6) Self-employed, small business owner, freelancer
- (7) Other private sector employee
- (99) Don't know/Refused

If d5a=1:

- (8) Currently unemployed
- (9) Housewife, houseman
- (10) Pensioner, retired
- (11) Pupil, student, trainee
- (12) Other
- (99) Don't know/Refused

2.4.3.10 d6 - Population (d6)

Long tag: qog_eqi_ind_1013_d6

Original tag: d6

Dataset citation: Charron et al. (2014)

Description:

About how many people live in the place the interview was conducted?

- (1) Less than 10,000 (rural)
- (2) 10,000 - 100,000 (small town or city)
- (3) 100,000 - 1,000,000 (large city or urban area)
- (4) More than 1,000,000 (very large city or urban area)
- (99) Don't know/Refused

2.4.3.11 gender (gender)

Long tag: qog_eqi_ind_1013_gender

Original tag: gender

Dataset citation: Charron et al. (2014)

Description:

Gender of respondent

- (0) Male
- (1) Female

2.4.3.12 edu3 (edu3)

Long tag: qog_eqi_ind_1013_edu3

Original tag: Edu3

Dataset citation: Charron et al. (2014)

Description:

Education of respondent

- (1) Lower education (lower secondary or less) includes ISCED "level 0 Not completed primary

educa- tion”, “1 Primary or first stage of basic”, and “2 Lower secondary or Second stage of basic education”. Also short vocational programs (less than 3 years) taken after primary school (shorter 3C programs), labeled in LFS with “22”.

(2) Medium education (higher secondary and post-secondary, non-tertiary) includes ISCED level “3 Upper secondary (A, B, C)” and “4 Post-secondary, non-tertiary”.

(3) Higher education (post-secondary) includes ISCED level 5 and higher levels, i.e. any stage of tertiary education (e.g. BA, BSc, MA, PhD), including vocational ISCED 5B programs which have different names in different countries.

(99) Don’t know/Refused

2.4.3.13 age4 (age4)

Long tag: qog_eqi_ind_1013_age4

Original tag: Age4

Dataset citation: Charron et al. (2014)

Description:

Age of respondent (categorical)

(1) 18-29

(2) 30-49

(3) 50-64

(4) 65+

(99) Don’t know/Refused

2.4.3.14 income3 (income3)

Long tag: qog_eqi_ind_1013_income3

Original tag: Income3

Dataset citation: Charron et al. (2014)

Description:

Categorical income, country specific

(1) Low

(2) Medium

(3) High

(99) Don’t know/Refused

2.4.3.15 population (population)

Long tag: qog_eqi_ind_1013_population

Original tag: Population

Dataset citation: Charron et al. (2014)

Description:

Population in respondent’s place

About how many people live in the place the interview was conducted?

(1) Less than 10,000 (rural)

(2) 10,000 - 100,000 (small town or city)

(3) 100,000 - 1,000,000 (large city or urban area)

(4) More than 1,000,000 (very large city or urban area) (99) Don’t know/Refused

2.4.3.16 unemployed (unemployed)

Long tag: qog_eqi_ind_1013_unemployed

Original tag: unemployed

Dataset citation: Charron et al. (2014)

Description:

Binary variable on respondent’s employment status

(0) Respondent reported being employed

(1) Respondent reported being unemployed

2.4.4 Weights

NA

2.4.4.1 dweight (dweight)

Long tag: qog_eqi_ind_1013_dweight

Original tag: Dweight

Dataset citation: Charron et al. (2014)

Description:

The design weight

For more information on its calculation, please refer to the introduction of this codebook.

2.4.4.2 psweight (psweight)

Long tag: qog_eqi_ind_1013_psweight

Original tag: PSweight

Dataset citation: Charron et al. (2014)

Description:

The post-stratification weight

For more information on its calculation, please refer to the introduction of this codebook.

2.4.4.3 pweight (pweight)

Long tag: qog_eqi_ind_1013_pweight

Original tag: Pweight

Dataset citation: Charron et al. (2014)

Description:

The population weight

For more information on its calculation, please refer to the introduction of this codebook.

2.5 QoG European Quality of Government Index Individual Level (2017)

Dataset tag: qog_eqi_ind_17

Output Unit: QoG EQI Respondent ID 2017, i.e., data is collected per respondent in this survey round. That means each row in the dataset can be identified by a respondent ID using the idfinal column.

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are impartially allocated and of good quality in the EU.

Dataset citation: Charron, N., V. Lapuente P. Annoni (2019). ‘Measuring Quality of Government in EU Regions Across Space and Time.’ Papers in Regional Science. DOI: 10.1111/pirs.12437

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust

their license without previous warning.

More detailed information on the dataset can be found at the following web page:
<https://www.gu.se/en/quality-government/qog-data/data-downloads/european-quality-of-government-index>

2.5.1 Identification Variables

These variables identify the observations in the dataset.

2.5.1.1 Respondent ID (idfinal)

Long tag: qog_eqi_ind_17_idfinal

Original tag: IDFinal

Dataset citation: Charron et al. (2019)

Description:

A unique respondent id number for the 2017 survey

2.5.1.2 Type of Telephone Interview (typetel)

Long tag: qog_eqi_ind_17_typedtel

Original tag: TYPETEL

Dataset citation: Charron et al. (2019)

Description:

Whether mobile or landline was used in the interview

2.5.1.3 Country (country)

Long tag: qog_eqi_ind_17_country

Original tag: COUNTRY

Dataset citation: Charron et al. (2019)

Description:

The country of the respondent

2.5.1.4 Language (language)

Long tag: qog_eqi_ind_17_language

Original tag: LANGUAGE

Dataset citation: Charron et al. (2019)

Description:

The language in which the interview was conducted

2.5.1.5 NUTS 2 (d7_nuts2)

Long tag: qog_eqi_ind_17_d7_nuts2

Original tag: D7_NUTS2

Dataset citation: Charron et al. (2019)

Description:

The NUTS 2 abbreviation code of the respondent's residence

2.5.1.6 NUTS 1 (d7_nuts1)

Long tag: qog_eqi_ind_17_d7_nuts1

Original tag: D7_NUTS1

Dataset citation: Charron et al. (2019)

Description:

The NUTS 1 abbreviation code of the respondent's residence

2.5.2 Demographic Variables

Variables in this section provide demographic information about the respondent.

2.5.2.1 Gender (d1)

Long tag: qog_eqi_ind_17_d1

Original tag: D1

Dataset citation: Charron et al. (2019)

Description:

Gender of respondent

2.5.2.2 Age (d3)

Long tag: qog_eqi_ind_17_d3

Original tag: D3

Dataset citation: Charron et al. (2019)

Description:

Age of respondent

2.5.2.3 Age Recoded (rd3)

Long tag: qog_eqi_ind_17_rd3

Original tag: RD3

Dataset citation: Charron et al. (2019)

Description:

Age of respondent (recoded categories) – 1=18-29,
2=30-49,
3=50-64,
4=65+,
99= Don't know/Refused

2.5.2.4 Educational Level (d2)

Long tag: qog_eqi_ind_17_d2

Original tag: D2

Dataset citation: Charron et al. (2019)

Description:

Education level of respondent.
1-Elementary (primary) school or less (no diploma),
2-High (secondary) school (but did not graduated from it),
3-Graduation from high (secondary) school,
4-Graduation from college, university or other third-level institute,
5-Post-graduate degree (Masters, PHD) beyond your initial college degree,
99 Don't know/Refused (2013 only)

2.5.2.5 Household Income (d4)

Long tag: qog_eqi_ind_17_d4

Original tag: D4

Dataset citation: Charron et al. (2019)

Description:

Please tell me your average total household net income per month (after taxes). In Euros (€)

2.5.2.6 Household Income Local Cuurrency (d4b)

Long tag: qog_eqi_ind_17_d4b

Original tag: D4B

Dataset citation: Charron et al. (2019)

Description:

Recoded d4 in local currency

2.5.2.7 Household Income Recoded (recoded4)

Long tag: qog_eqi_ind_17_recoded4

Original tag: RECODED4

Dataset citation: Charron et al. (2019)

Description:

Categorical re-code of rd4 income, country specific (1=low, 2=medium, 3=high) (2013 only)

2.5.2.8 Public Sector Organization (d5a)

Long tag: qog_eqi_ind_17_d5a

Original tag: D5A

Dataset citation: Charron et al. (2019)

Description:

As far as your current occupation is concerned, would you say you work in the public sector (a public sector organization is either wholly owned by the public authorities or they have a majority share), the private sector or would you say that you are without a professional activity? (1=public sector, 2=private sector, 3=without professional employment, 99= Don't know/Refused) (2013 only)

2.5.2.9 Public Sector Organization if D5A = 1 (d5b)

Long tag: qog_eqi_ind_17_d5b

Original tag: D5B

Dataset citation: Charron et al. (2019)

Description:

f d5a=1:

- (1) Military, soldier
- (2) Law enforcement, police, fire-fighter
- (3) Healthcare worker, doctor
- (4) Teacher, academic, researcher
- (5) Other government agency
- (99) Don't know/Refused

If d5a=2:

- (6) Self-employed, small business owner, freelancer
- (7) Other private sector employee
- (99) Don't know/Refused

If d5a=3:

- (8) Currently unemployed
- (9) Housewife, houseman
- (10) Pensioner, retired
- (11) Pupil, student, trainee
- (12) Other
- (99) Don't know/Refused

2.5.2.10 Population (d6)

Long tag: qog_eqi_ind_17_d6

Original tag: D6

Dataset citation: Charron et al. (2019)

Description:

About how many people live in the place the interview was conducted?

1= lt;10,000 (rural),

2=10,000-100,000 (small town or city),

3=100,000-1,000,000 (large city or urban area),

4= gt;1,000,000 (Very large city or urban area),

99=Don't know/Refused (2013 only)

2.5.3 Survey Questions

Survey Question included in the QoG EQI Survey

2.5.3.1 Q1: Public School Enrollment or Employment (q1)

Long tag: qog_eqi_ind_17_q1

Original tag: Q1

Dataset citation: Charron et al. (2019)

Description:

Have you or any of your immediate family been enrolled or employed in the public school system in your area in the past 12 months? (1 yes, 2 no)

99=Don't know/Refused

2.5.3.2 Q2: Use of Public Health Care Services (q2)

Long tag: qog_eqi_ind_17_q2

Original tag: Q2

Dataset citation: Charron et al. (2019)

Description:

In the past 12 months have you or anyone in your immediate family used public health care services in your area? (1 yes, 2 no)

99=Don't know/Refused

2.5.3.3 Q3: Contact with Security or Police Forces (q3)

Long tag: qog_eqi_ind_17_q3

Original tag: Q3

Dataset citation: Charron et al. (2019)

Description:

Have you or anyone in your immediate family had any recent contact (positive or negative) with the security or police forces in your area in the past 12 months? (1 yes, 2 no)

99=Don't know/Refused

2.5.3.4 Q4: Quality of Public Education (q4)

Long tag: qog_eqi_ind_17_q4

Original tag: Q4

Dataset citation: Charron et al. (2019)

Description:

How would you rate the quality of public education in your area? (1-10, with '1' being very poor and '10' being excellent quality)

2.5.3.5 Q5: Quality of Public Health Care (q5)

Long tag: qog_eqi_ind_17_q5

Original tag: Q5

Dataset citation: Charron et al. (2019)

Description:

How would you rate the quality of the public health care system in your area? (1-10, with '1' being very poor and '10' being excellent quality)

2.5.3.6 Q6: Quality of Police Force (q6)

Long tag: qog_eqi_ind_17_q6

Original tag: Q6

Dataset citation: Charron et al. (2019)

Description:

How would you rate the quality of the police force in your area? (1-10, with '1' being very poor and '10' being excellent quality)

2.5.3.7 Q7: Advantages in Education (q7)

Long tag: qog_eqi_ind_17_q7

Original tag: Q7

Dataset citation: Charron et al. (2019)

Description:

Certain people are given special advantages in the public education system in my area. (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.8 Q8: Advantages in Public Health Care (q8)

Long tag: qog_eqi_ind_17_q8

Original tag: Q8

Dataset citation: Charron et al. (2019)

Description:

Certain people are given special advantages in the public health care system in my area (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.9 Q9: Advantages by Police Forces (q9)

Long tag: qog_eqi_ind_17_q9

Original tag: Q9

Dataset citation: Charron et al. (2019)

Description:

The police force gives special advantages to certain people in my area (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.10 Q10: Equal Treatment in Education System (q10)

Long tag: qog_eqi_ind_17_q10

Original tag: Q10

Dataset citation: Charron et al. (2019)

Description:

All citizens are treated equally in the public education system in my area (1-4, Agree, rather agree, rather disagree or Disagree')

2.5.3.11 Q11: Equal Treatment in Public Health Care (q11)

Long tag: qog_eqi_ind_17_q11

Original tag: Q11

Dataset citation: Charron et al. (2019)

Description:

All citizens are treated equally in the public health care system in my area (1-4, Agree, rather agree, rather disagree or Disagree')

2.5.3.12 Q12: Equal Treatment by Police Forces (q12)

Long tag: qog_eqi_ind_17_q12

Original tag: Q12

Dataset citation: Charron et al. (2019)

Description:

All citizens are treated equally by the police force in my area (1-4, Agree, rather agree, rather disagree or Disagree')

2.5.3.13 Q13: Corruption Prevalance in Public School System (q13)

Long tag: qog_eqi_ind_17_q13

Original tag: Q13

Dataset citation: Charron et al. (2019)

Description:

Corruption is prevalent in my area's local public school system (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.14 Q14: Corruption Prevalance in Public Health Care (q14)

Long tag: qog_eqi_ind_17_q14

Original tag: Q14

Dataset citation: Charron et al. (2019)

Description:

Corruption is prevalent in the public health care system in my area (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.15 Q15: Corruption Prevalance among Police Forces (q15)

Long tag: qog_eqi_ind_17_q15

Original tag: Q15

Dataset citation: Charron et al. (2019)

Description:

Corruption is prevalent in the police force in my area (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.16 Q16.1. Corruption for Basic Public Services (q16_1)

Long tag: qog_eqi_ind_17_q16_1

Original tag: Q16_1

Dataset citation: Charron et al. (2019)

Description:

People in my area must use some form of corruption to just to get some basic public services (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.17 Q16.2. Corruption for Unfair Privileges (q16_2)

Long tag: qog_eqi_ind_17_q16_2

Original tag: Q16_2

Dataset citation: Charron et al. (2019)

Description:

Corruption in my area is used to get access to special unfair privileges and wealth. (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.18 Q17.1. Bribery: Asked by Education Services (q17_1)

Long tag: qog_eqi_ind_17_q17_1

Original tag: Q17_1

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in education services? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.19 Q17.2. Bribery: Asked by Health or Medical Services (q17_2)

Long tag: qog_eqi_ind_17_q17_2

Original tag: Q17_2

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in health or medical services? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.20 Q17.3. Bribery: Asked by Police (q17_3)

Long tag: qog_eqi_ind_17_q17_3

Original tag: Q17_3

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in police? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.21 Q17.4. Bribery: Asked by Other Government Run Agency (q17_4)

Long tag: qog_eqi_ind_17_q17_4

Original tag: Q17_4

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in any other government-run agency? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.22 Q18.1. Bribery: given to Education Services (q18_1)

Long tag: qog_eqi_ind_17_q18_1

Original tag: Q18_1

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family given an informal gift or bribe to education services? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.23 Q18.2. Bribery: Given to Health or Medical Services (q18_2)

Long tag: qog_eqi_ind_17_q18_2

Original tag: Q18_2

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family given an informal gift or bribe to health or medical services? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.24 Q18.3. Bribery: Given to Police (q18_3)

Long tag: qog_eqi_ind_17_q18_3

Original tag: Q18_3

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family given an informal gift or bribe to the police? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.25 Q18.4. Bribery: Given to Other Government-Run Agency (q18_4)

Long tag: qog_eqi_ind_17_q18_4

Original tag: Q18_4

Dataset citation: Charron et al. (2019)

Description:

In the last 12 months, have you or anyone in your family given an informal gift or bribe to any other government-run agency? (1 yes/ 2 no) 99 Don't know/Refused

2.5.3.26 Q19: Corruption: Elections (q19)

Long tag: qog_eqi_ind_17_q19

Original tag: Q19

Dataset citation: Charron et al. (2019)

Description:

Corruption is NOT present in elections in my area. (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.27 Q20: Equal Treatment by Tax Authorities (q20)

Long tag: qog_eqi_ind_17_q20

Original tag: Q20

Dataset citation: Charron et al. (2019)

Description:

The tax authorities in my **area** treat all people equally (1-10, with 1 being 'strongly disagree' and 10 being 'strongly agree')

2.5.3.28 Q21: News Sources (q21)

Long tag: qog_eqi_ind_17_q21

Original tag: Q21

Dataset citation: Charron et al. (2019)

Description:

From which of the following do you most often get your news?

[Randomizeorder ~ Singlechoice ~ Readout] (1)

1. In a print or online newspaper,
2. On the radio,
3. On television,
4. An online social networking site (such as Facebook, Twitter or Youtube) or any other website (blogs..)

2.5.3.29 Q22.1. Trust Others (q22_1)

Long tag: qog_eqi_ind_17_q22_1

Original tag: Q22_1

Dataset citation: Charron et al. (2019)

Description:

On a 1-10 scale, with '1' being 'don't trust at all', and '10' being 'complete trust', how much do you personally trust the other people in your area?

2.5.3.30 Q22.2. Trust National Parliament (q22_2)*Long tag:* qog_eqi_ind_17_q22_2*Original tag:* Q22_2*Dataset citation:* Charron et al. (2019)*Description:*

On a 1-10 scale, with '1' being 'don't trust at all', and '10' being 'complete trust', how much do you personally trust the COUNTRY'S parliament?

2.5.3.31 Q22.3. Trust European Union (q22_3)*Long tag:* qog_eqi_ind_17_q22_3*Original tag:* Q22_3*Dataset citation:* Charron et al. (2019)*Description:*

On a 1-10 scale, with '1' being 'don't trust at all', and '10' being 'complete trust', how much do you personally trust the European Union?

2.5.3.32 Q22.4. Trust Regional or Local Parliament (q22_4)*Long tag:* qog_eqi_ind_17_q22_4*Original tag:* Q22_4*Dataset citation:* Charron et al. (2019)*Description:*

On a 1-10 scale, with '1' being 'don't trust at all', and '10' being 'complete trust', how much do you personally trust your regional/local parliament?

2.5.3.33 Q23.1. Public v Private Ownership (q23_1)*Long tag:* qog_eqi_ind_17_q23_1*Original tag:* Q23_1*Dataset citation:* Charron et al. (2019)*Description:*

We'd like to ask you about your views on some issues in the next few questions. Please rate how strongly you agree with the following statements, with '1' being strongly disagree, and '10' being strongly agree. (1-10 scale, 99 Don't know/Refused):

You prefer private ownership of business and industry over state ownership in most cases

2.5.3.34 Q23.2. Government Responsibility to Reduce Income Differences (q23_2)*Long tag:* qog_eqi_ind_17_q23_2*Original tag:* Q23_2*Dataset citation:* Charron et al. (2019)*Description:*

We'd like to ask you about your views on some issues in the next few questions. Please rate how strongly you agree with the following statements, with '1' being strongly disagree, and '10' being strongly agree. (1-10 scale, 99 Don't know/Refused):

The government in COUNTRY should take measures to reduce differences in peoples' income.

2.5.3.35 Q23.3. Environmental Protection v Economic Growth (q23_3)*Long tag:* qog_eqi_ind_17_q23_3*Original tag:* Q23_3*Dataset citation:* Charron et al. (2019)*Description:*

We'd like to ask you about your views on some issues in the next few questions. Please rate

how strongly you agree with the following statements, with ‘1’ being strongly disagree, and ‘10’ being strongly agree. (1-10 scale, 99 Don’t know/Refused):

Protecting the environment should always take priority, even at the cost of economic growth

2.5.3.36 Q23.4. Migration (q23_4)

Long tag: qog_eqi_ind_17_q23_4

Original tag: Q23_4

Dataset citation: Charron et al. (2019)

Description:

We’d like to ask you about your views on some issues in the next few questions. Please rate how strongly you agree with the following statements, with ‘1’ being strongly disagree, and ‘10’ being strongly agree. (1-10 scale, 99 Don’t know/Refused):

Immigrants contribute a lot to COUNTRY

2.5.3.37 Q23.5. Strong Leader (q23_5)

Long tag: qog_eqi_ind_17_q23_5

Original tag: Q23_5

Dataset citation: Charron et al. (2019)

Description:

We’d like to ask you about your views on some issues in the next few questions. Please rate how strongly you agree with the following statements, with ‘1’ being strongly disagree, and ‘10’ being strongly agree. (1-10 scale, 99 Don’t know/Refused):

We need a strong leader with the willingness to punish those who don’t behave properly.

2.5.3.38 Q24. State of Economy (q24)

Long tag: qog_eqi_ind_17_q24

Original tag: Q24

Dataset citation: Charron et al. (2019)

Description:

How would you judge the current state of the economy in (YOUR COUNTRY)? (1. Very good, 2. Somewhat good, 3. Somewhat bad, 4. Very bad)

2.5.3.39 Q25. Political Party Preference (q25)

Long tag: qog_eqi_ind_17_q25

Original tag: Q25

Dataset citation: Charron et al. (2019)

Description:

What political party would you vote for if the national parliamentary election were today? (2013 only)

2.5.3.40 Q26.a.1. Randomized Question 1 (q26a1)

Long tag: qog_eqi_ind_17_q26a1

Original tag: Q26A1

Dataset citation: Charron et al. (2019)

Description:

Randomized experimental question – 4 equally-sized random groups – responses:

1. Still vote for preferred party

2. Vote for another established party not involved in the corruption scandal
 3. Not vote at all.
- 99 Don't know/Refused

Now imagine that your preferred party was involved in a corruption scandal where party leaders had given high level jobs to their unqualified friends and family, which of the following would be most likely?

2.5.3.41 Q26.a.2. Randomized Question 2 (q26a2)

Long tag: qog_eqi_ind_17_q26a2

Original tag: Q26A2

Dataset citation: Charron et al. (2019)

Description:

Randomized experimental question – 4 equally-sized random groups – responses:

1. Still vote for preferred party
 2. Vote for another established party not involved in the corruption scandal
 3. Not vote at all.
- 99 Don't know/Refused

Now imagine that your preferred party was involved in a corruption scandal where party leaders had been caught with public funds in their personal bank accounts, which of the following would be most likely?

2.5.3.42 Q26.a.3. Randomized Question 3 (q26a3)

Long tag: qog_eqi_ind_17_q26a3

Original tag: Q26A3

Dataset citation: Charron et al. (2019)

Description:

Randomized experimental question – 4 equally-sized random groups – responses:

1. Still vote for preferred party
 2. Vote for another established party not involved in the corruption scandal
 3. Not vote at all.
- 99 Don't know/Refused

Now imagine that your preferred party was involved in a corruption scandal where party leaders had been caught taking bribes in exchange for public contracts, which of the following would be most likely?

2.5.3.43 Q26.a.4. Randomized Question 4 (q26a4)

Long tag: qog_eqi_ind_17_q26a4

Original tag: Q26A4

Dataset citation: Charron et al. (2019)

Description:

Randomized experimental question – 4 equally-sized random groups – responses:

1. Still vote for preferred party
 2. Vote for another established party not involved in the corruption scandal
 3. Not vote at all.
- 99 Don't know/Refused

Now imagine that that party was involved in a corruption scandal, which of the following would be most likely?

2.5.3.44 Q26.b.1. Follow Up to Randomized Question 1 (q26b_1)

Long tag: qog_eqi_ind_17_q26b_1

Original tag: Q26B_1

Dataset citation: Charron et al. (2019)

Description:

Follow up ONLY if ‘1’ on 26a – could you just tell me if you ‘totally agree’, ‘rather agree’, ‘rather disagree’ or ‘totally disagree’ with the following as to why your choice is to still vote for your preferred party?

No other party comes as close to reflecting your political preferences

2.5.3.45 Q26.b.2. Follow Up to Randomized Question 2 (q26b_2)

Long tag: qog_eqi_ind_17_q26b_2

Original tag: Q26B_2

Dataset citation: Charron et al. (2019)

Description:

Follow up ONLY if ‘1’ on 26a – could you just tell me if you ‘totally agree’, ‘rather agree’, ‘rather disagree’ or ‘totally disagree’ with the following as to why your choice is to still vote for your preferred party?

The other parties are probably involved in corruption as well

2.5.3.46 Q26.b.3. Follow Up to Randomized Question 3 (q26b_3)

Long tag: qog_eqi_ind_17_q26b_3

Original tag: Q26B_3

Dataset citation: Charron et al. (2019)

Description:

Follow up ONLY if ‘1’ on 26a – could you just tell me if you ‘totally agree’, ‘rather agree’, ‘rather disagree’ or ‘totally disagree’ with the following as to why your choice is to still vote for your preferred party?

Corruption as an issue is just not as important as other things, like the economy or jobs

2.5.3.47 Q26.b.4. Follow Up to Randomized Question 4 (q26b_4)

Long tag: qog_eqi_ind_17_q26b_4

Original tag: Q26B_4

Dataset citation: Charron et al. (2019)

Description:

Follow up ONLY if ‘1’ on 26a – could you just tell me if you ‘totally agree’, ‘rather agree’, ‘rather disagree’ or ‘totally disagree’ with the following as to why your choice is to still vote for your preferred party?

Your party would most likely deal with the scandal internally and punish those involved

2.5.4 Weights

NA

2.5.4.1 Individual Weights (iweight)

Long tag: qog_eqi_ind_17_iweight

Original tag: Iweight

Dataset citation: Charron et al. (2019)

Description:

Individual weights based on gender and age compared with region’s actual population.

The EQI employs a random sampling technique that does not involve quotas (other than NUTS regions) or stratification on demographic categories across individuals, such as gender. The post stratification weights thus help to adjust the sample to better match the population on general demographic characteristics. In this case, gender and age are included (see the variables ‘D1’ and ‘D3’). Population data is taken from Eurostat for all countries. Cross-tabulations from the population data were then collected and put together for each country and region and were compared with that of the cross tabulations in the sample. The Iweights were calculated based on differences between the sample and population cells, such that demographic groups (older males for example) that were over (under) sampled relative to the population receive a lower (higher) weight.

2.5.4.2 Design Weights (dweight)

Long tag: qog_eqi_ind_17_dweight

Original tag: Dweight

Dataset citation: Charron et al. (2019)

Description:

The design weight

Design weights are included to compensate for the fact that certain people have a higher or lower likelihood of being selected for the survey than others. As the EQI survey is one that draws an equal number of respondents from each NUTS 2 (or NUTS 1 region in some cases), respondents do not have the same likelihood of selection within countries. There are an uneven amount of regions across countries and the design weights are country-centric, and are equal to the inverse of the size of a region’s population within each country, so that more (less) populous regions receive greater (lesser) weights than rural ones to compensate for the fact that their sample size is equal in the survey data. Although for all analyses it is important to use the Dweight, it is especially important for country comparisons, means, proportions, etc. to use the design weights, otherwise results will likely be biased.

The Dweight is equal to Population size aged 18 years and above in region X in country Y / Net sample size of region X in country Y. It therefore has a mean value of ‘1’ in each country.

2.5.4.3 Population Weights (pweight)

Long tag: qog_eqi_ind_17_pweight

Original tag: Pweight

Dataset citation: Charron et al. (2019)

Description:

The population weight

The population weight is included for comparisons across countries and is included to adjust for a country’s proportion in the sample relative to its actual population of the total population of all countries in the survey. The weights are thus at the country level and do not need to be included for single country, regional level analyses or analyses where comparing country averages of certain survey items are of interest where the country-level is the primary unit of comparison. However, in obtaining sample-wide (or EU-wide) means or proportions, it is recommended to use the population weights.

The Pweight helps to correct for any potential bias in obtaining means, proportion, etc when combining data from two or more countries. Without the Pweight, the researcher risks (most often) over-represent smaller countries at the expense of larger ones. The Pweight thus is included to adjust so that every country is represented in relative proportion to its population size of the countries in the sample for each year. The population size weight is calculated as $PWEIGHT = \text{population size aged 18 and above} / \text{net sample size in country}$.

2.5.4.4 Post Stratification Weight (psweight)

Long tag: qog_eqi_ind_17_psweight

Original tag: PSweight

Dataset citation: Charron et al. (2019)

Description:

The post stratification weight.

The PSweights are the product of the Iweights and the Dweights.

PSweights are recommended when comparing means, proportions, etc across regions and/or countries to correct for sampling issues. However, for more sophisticated, multilevel statistical analyses, the researcher can/should include additional demographic controls as independent variables in the model, such as income or age for example.

Weighting truncations and re-scaling

To avoid extreme weighting values, all values are truncated at the 99th percentile of the distribution of the originally calculated design and post-stratification weight values. This truncates the weights at the high end at about a value of ‘5’, which effects on 144 cases in the 2017 data. Weights are then divided by the mean value of the sample to adjust for the sample size, giving the mean weight a value of ‘1’.

Missing data

In the case of missing data, this outcome is coded ‘99’ in the dataset. On the two post-stratification control variables (gender and education) in no case do we find that any country exceeds 1percent of the total observations as missing values, thus we follow the standard practice of MCAR (missing completely at random assumption) and simply drop these observations from the weighting scheme.

2.6 QoG European Quality of Government Index Individual Level (2021)

Dataset tag: qog_eqi_ind_21

Output Unit: QoG EQI Respondent ID 2021, i.e., data is collected per respondent in this survey round. That means each row in the dataset can be identified by a respondent ID using the resp_id column.

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are impartially allocated and of good quality in the EU.

Dataset citation: Charron, Nicholas, Victor Lapuente Monika Bauhr. 2021. Sub-national Quality of Government in EU Member States: Presenting the 2021 European Quality of Government Index and its relationship with Covid-19 indicators. University of Gothenburg: The QoG Working Paper Series 2021:4.

2.6.1 Identification Variables

These variables identify the observations in the dataset.

2.6.1.1 Respondent ID (resp_id)

Long tag: qog_eqi_ind_21_resp_id

Original tag: resp_id

Dataset citation: Charron et al. (2021)

Description:

Respondent ID Number

2.6.1.2 Type of interview (typeinterview)

Long tag: qog_eqi_ind_21_typeinterview

Original tag: typeinterview

Dataset citation: Charron et al. (2021)

Description:

How was the interview conducted?

1. Computer assisted telephone interview(CATI)
2. Online

2.6.1.3 Type of Interview, detailed (typetel)

Long tag: qog_eqi_ind_21_typetel

Original tag: typetel

Dataset citation: Charron et al. (2021)

Description:

Whether mobile or landline was used in the interview.

1. Landline
2. Mobile Phone
3. Online

2.6.1.4 Country of respondents (country)

Long tag: qog_eqi_ind_21_country

Original tag: country

Dataset citation: Charron et al. (2021)

Description:

Unique country code, numeric.

1. Austria
2. Belgium
3. Bulgaria
4. Croatia
5. Cyprus
6. Czechia
7. Denmark
8. Estonia
9. Finland
10. France
11. Germany
12. Greece

13. Hungary
14. Ireland
15. Italy
16. Latvia
17. Lithuania
18. Luxembourg
19. Malta
20. Netherlands
21. Poland
22. Portugal
23. Romania
24. Slovakia
25. Slovenia
26. Spain
27. Sweden

2.6.1.5 Language of interview (language)

Long tag: qog_eqi_ind_21_language

Original tag: language

Dataset citation: Charron et al. (2021)

Description:

The language in which the interview was conducted, numeric.

1. Basque
2. Bulgarian
3. Catalan
4. Croatian
5. Czech
6. Danish
7. Dutch
8. English
9. Estonian
10. Finnish
11. French
12. German
13. Greek
14. Hungarian
15. Italian
16. Latvian
17. Lithuanian
18. Luxembourgish
19. Maltese
20. Polish
21. Portuguese
22. Romanian
23. Russian
24. Slovak
25. Slovene
26. Spanish
27. Swedish

2.6.1.6 EQI regional code (eqiregion)

Long tag: qog_eqi_ind_21_eqiregion

Original tag: EQIregion

Dataset citation: Charron et al. (2021)

Description:

Regional identifier at the level of EQI data.

2.6.1.7 NUTS3 abbreviation Code (nuts3)*Long tag:* qog_eqi_ind_21_nuts3*Original tag:* NUTS3*Dataset citation:* Charron et al. (2021)*Description:*

Abbreviation code of NUTS3-level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 3: small regions for specific diagnoses.

2.6.1.8 NUTS2 abbreviation Code (nuts2)*Long tag:* qog_eqi_ind_21_nuts2*Original tag:* NUTS2*Dataset citation:* Charron et al. (2021)*Description:*

Abbreviation code of NUTS2-level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 2: basic regions for the application of regional policies.

2.6.1.9 NUTS1 abbreviation code (nuts1)*Long tag:* qog_eqi_ind_21_nuts1*Original tag:* NUTS1*Dataset citation:* Charron et al. (2021)*Description:*

Abbreviation code of NUTS1-level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions.

2.6.1.10 Postcode (postcode)*Long tag:* qog_eqi_ind_21_postcode*Original tag:* postcode*Dataset citation:* Charron et al. (2021)*Description:*

Postcode of district that interviewee resides.

2.6.2 Demographic Variables

Variables in this section provide demographic information about the respondent.

2.6.2.1 Gender of respondent (d1)*Long tag:* qog_eqi_ind_21_d1*Original tag:* d1*Dataset citation:* Charron et al. (2021)*Description:*

- (1) Male
- (2) Female

2.6.2.2 Age of respondent (recoded categories) (d2quotas)*Long tag:* qog_eqi_ind_21_d2quotas*Original tag:* d2quotas

Dataset citation: Charron et al. (2021)

Description:

- (1) 18-29
- (2) 30-49
- (3) 50-64
- (4) 65 and above
- (99) Don't know/Refused

2.6.2.3 Education of respondent (d3recode)

Long tag: qog_eqi_ind_21_d3recode

Original tag: d3recode

Dataset citation: Charron et al. (2021)

Description:

What is the highest level in school you have completed?

- (1) Elementary
- (2) Secondary
- (3) Third level

2.6.2.4 Household income (d4)

Long tag: qog_eqi_ind_21_d4

Original tag: d4

Dataset citation: Charron et al. (2021)

Description:

Total household net income per month, after taxes. Stated in Euros (€).

2.6.2.5 Categorical re-code of d4(income) (recoded4)

Long tag: qog_eqi_ind_21_recoded4

Original tag: recoded4

Dataset citation: Charron et al. (2021)

Description:

Country-specific, categorical recode of household income, in local currencies. "Don't know/Refused" is coded as 999.

2.6.2.6 Occupation by sector (d5a)

Long tag: qog_eqi_ind_21_d5a

Original tag: d5a

Dataset citation: Charron et al. (2021)

Description:

As far as your current occupation is concerned, would you say you work in the public sector (a public sector organization is either wholly owned by the public authorities or they have a majority share), the private sector or would you say that you are without a professional activity?

- (1) Public sector
- (2) Private sector
- (3) Without professional employment
- (99) Don't know/Refused

2.6.2.7 Occupation (IF d5a=1) (d5b)

Long tag: qog_eqi_ind_21_d5b

Original tag: d5b

Dataset citation: Charron et al. (2021)

Description:

If d5a=1:

- (1) Military, soldier
- (2) Lawn enforcement, police, fire-fighter
- (3) Healthcare worker, doctor
- (4) Teacher, academic, researcher
- (5) Other government agency
- (99) Don't know/Refused

If d5a=2:

- (6) Self-employed, small business owner, freelancer
- (7) Other private sector employee
- (99) Don't know/Refused

If d5a=3:

- (8) Currently unemployed
- (9) Housewife, houseman
- (10) Pensioner, retired
- (11) Pupil, student, trainee
- (12) Other
- (99) Don't know/Refused

2.6.2.8 Were you born in (COUNTRY) (d6)*Long tag:* qog_eqi_ind_21_d6*Original tag:* d6*Dataset citation:* Charron et al. (2021)*Description:*

About how many people live in the place the interview was conducted?

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.2.9 Population (d7)*Long tag:* qog_eqi_ind_21_d7*Original tag:* d7*Dataset citation:* Charron et al. (2021)*Description:*

About how many people live in the place the interview was conducted?

- (1) Less than 10,000 (rural)
- (2) 10,000 - 100,000 (small town or city)
- (3) 100,000 - 1,000,000 (large city or urban area)
- (4) More than 1,000,000 (very large city or urban area)
- (99) Don't know/Refused

2.6.3 Survey Questions

Survey Question included in the QoG EQI Survey

2.6.3.1 Have you or any of your immediate family been enrolled or employed in the public school system in your area in the past 12 months? (q1)*Long tag:* qog_eqi_ind_21_q1*Original tag:* q1*Dataset citation:* Charron et al. (2021)*Description:*

- (1) Yes

- (2) No
- (99) Don't know/Refused

2.6.3.2 Have you or any of your immediate family used public health care services in your area in the past 12 months? (q2)

Long tag: qog_eqi_ind_21_q2

Original tag: q2

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.3 Have you or anyone in your immediate family had any recent contact (positive or negative) with the security or police forces in your area in the past 12 months? (q3)

Long tag: qog_eqi_ind_21_q3

Original tag: q3

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.4 How would you rate the quality of public education in your area? (q4)

Long tag: qog_eqi_ind_21_q4

Original tag: q4

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.6.3.5 How would you rate the quality of the public health care system in your area? (q5)

Long tag: qog_eqi_ind_21_q5

Original tag: q5

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.6.3.6 How would you rate the quality of the police force in your area? (q6)

Long tag: qog_eqi_ind_21_q6

Original tag: q6

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "very poor" and 10 means "excellent".

2.6.3.7 Certain people are given special advantages in the public education system in my area. (q7)

Long tag: qog_eqi_ind_21_q7

Original tag: q7

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.8 Certain people are given special advantages in the public health care system in my area. (q8)

Long tag: qog_eqi_ind_21_q8

Original tag: q8

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.9 The police force gives special advantages to certain people in my area. (q9)

Long tag: qog_eqi_ind_21_q9

Original tag: q9

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.10 All citizens are treated equally in the public education system in my area. (q10)

Long tag: qog_eqi_ind_21_q10

Original tag: q10

Dataset citation: Charron et al. (2021)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.6.3.11 All citizens are treated equally in the public health care system in my area. (q11)

Long tag: qog_eqi_ind_21_q11

Original tag: q11

Dataset citation: Charron et al. (2021)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.6.3.12 All citizens are treated equally by the police force in my area. (q12)

Long tag: qog_eqi_ind_21_q12

Original tag: q12

Dataset citation: Charron et al. (2021)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.6.3.13 In the area where I live, elections are conducted freely and fairly. (q13)

Long tag: qog_eqi_ind_21_q13

Original tag: q13

Dataset citation: Charron et al. (2021)

Description:

- (1) Agree
- (2) Rather Agree
- (3) Rather Disagree
- (4) Disagree

2.6.3.14 Corruption is prevalent in my area's local public school system. (q14)

Long tag: qog_eqi_ind_21_q14

Original tag: q14

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.6.3.15 Corruption is prevalent in the public health care system in my area. (q15)

Long tag: qog_eqi_ind_21_q15

Original tag: q15

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.6.3.16 Corruption is prevalent in the police force in my area. (q16)

Long tag: qog_eqi_ind_21_q16

Original tag: q16

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.6.3.17 People in my area must use some form of corruption to just to get some basic public services. (q17_1)

Long tag: qog_eqi_ind_21_q17_1

Original tag: q17_1

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.6.3.18 Corruption in my area is used to get access to special unfair privileges and wealth. (q17_2)

Long tag: qog_eqi_ind_21_q17_2

Original tag: q17_2

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree".

2.6.3.19 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in schools and other education services? (q18_1)

Long tag: qog_eqi_ind_21_q18_1

Original tag: q18_1

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.20 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in health or medical services? (q18_2)

Long tag: qog_eqi_ind_21_q18_2

Original tag: q18_2

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.21 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in police authorities? (q18_3)

Long tag: qog_eqi_ind_21_q18_3

Original tag: q18_3

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.22 In the last 12 months, have you or anyone in your family been asked by a public official to give an informal gift or bribe in any other government-run agency? (q18_4)

Long tag: qog_eqi_ind_21_q18_4

Original tag: q18_4

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.23 In the last 12 months, have you or anyone in your family given an informal gift or bribe to schools or other education services? (q19_1)

Long tag: qog_eqi_ind_21_q19_1

Original tag: q19_1

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.24 In the last 12 months, have you or anyone in your family given an informal gift or bribe to health or medical services? (q19_2)

Long tag: qog_eqi_ind_21_q19_2

Original tag: q19_2

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.25 In the last 12 months, have you or anyone in your family given an informal gift or bribe to police? (q19_3)

Long tag: qog_eqi_ind_21_q19_3

Original tag: q19_3

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.26 In the last 12 months, have you or anyone in your family given an informal gift or bribe to any other government-run agency? (q19_4)

Long tag: qog_eqi_ind_21_q19_4

Original tag: q19_4

Dataset citation: Charron et al. (2021)

Description:

- (1) Yes
- (2) No
- (99) Don't know/Refused

2.6.3.27 Changing topics a bit, how would you judge the current state of the economy in the area where you live? (q20)

Long tag: qog_eqi_ind_21_q20

Original tag: q20

Dataset citation: Charron et al. (2021)

Description:

- (1) Very good
- (2) Somewhat good
- (3) Somewhat bad
- (4) Very bad
- (99) Don't know/Refused

2.6.3.28 What political party would you vote for if the national parliamentary election were today? (q21)

Long tag: qog_eqi_ind_21_q21

Original tag: q21

Dataset citation: Charron et al. (2021)

Description:

Each respondent hears a pre-coded list of all actual political parties, including an "other" (not specified) and a "don't know/refused" option.

2.6.3.29 On a 1 to 10 scale, with ‘1’ being ‘no confidence at all’, and ‘10’ being ‘complete confidence’ to do the right thing, how much confidence do you personally have in (COUNTRY’s) parliament? (q22_1)

Long tag: qog_eqi_ind_21_q22_1

Original tag: q22_1

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means ‘no confidence’; and 10 means ‘Complete confidence’;

2.6.3.30 On a 1 to 10 scale, with ‘1’ being ‘no confidence at all’, and ‘10’ being ‘complete confidence’ to do the right thing, how much confidence do you personally have in other people in your area? (q22_2)

Long tag: qog_eqi_ind_21_q22_2

Original tag: q22_2

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means ‘no confidence’; and 10 means ‘Complete confidence’;

2.6.3.31 People might feel different levels of attachment to where they live and to Europe, on a scale of 1-10 with ‘1’ being ‘not at all’ and ‘10’ being ‘very attached’, how closely attached do you feel about (COUNTRY)? (q23_1)

Long tag: qog_eqi_ind_21_q23_1

Original tag: q23_1

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means ‘Not at all’; and 10 means ‘Very attached’;

2.6.3.32 People might feel different levels of attachment to where they live and to Europe, on a scale of 1-10 with ‘1’ being ‘not at all’ and ‘10’ being ‘very attached’, how closely attached do you feel about your region in (COUNTRY)? (q23_2)

Long tag: qog_eqi_ind_21_q23_2

Original tag: q23_2

Dataset citation: Charron et al. (2021)

Description:

on a scale from 1 to 10, where 1 means ‘Not at all’; and 10 means ‘Very attached’;

2.6.3.33 People might feel different levels of attachment to where they live and to Europe, on a scale of 1-10 with ‘1’ being ‘not at all’ and ‘10’ being ‘very attached’, how closely attached do you feel about Europe? (q23_3)

Long tag: qog_eqi_ind_21_q23_3

Original tag: q23_3

Dataset citation: Charron et al. (2021)

Description:

on a scale from 1 to 10, where 1 means ‘Not at all’; and 10 means ‘Very attached’;

2.6.3.34 The government in (COUNTRY) should reduce differences in peoples’ incomes by taxing wealthier people and then providing welfare to the poor. (q25)

Long tag: qog_eqi_ind_21_q25

Original tag: q25

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.35 Governments should control prices and wages. (q26)

Long tag: qog_eqi_ind_21_q26

Original tag: q26

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.36 On whole, (COUNTRY) is worse-off by people coming to live here from other countries. (q27)

Long tag: qog_eqi_ind_21_q27

Original tag: q27

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.37 Gays and lesbians should be allowed to marry legally. (q28)

Long tag: qog_eqi_ind_21_q28

Original tag: q28

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.38 We'd be better off if we went back to living according to (COUNTRY's) traditional values. (q30)

Long tag: qog_eqi_ind_21_q30

Original tag: q30

Dataset citation: Charron et al. (2021)

Description:

On a scale from 1 to 10, where 1 means "Strongly disagree" and 10 means "Strongly agree";.

2.6.3.39 Personally, how worried are you about the effect of the COVID-19 virus on your own or your family's health? (q31_1)

Long tag: qog_eqi_ind_21_q31_1

Original tag: q31_1

Dataset citation: Charron et al. (2021)

Description:

- (1) Very worried
- (2) Somewhat worried
- (3) Not so worried
- (4) Not at all worried
- (99) Don't know/Refused

2.6.3.40 Personally, how worried are you about the effect of the COVID-19 virus on your own or your family's economic situation? (q31_2)*Long tag:* qog_eqi_ind_21_q31_2*Original tag:* q31_2*Dataset citation:* Charron et al. (2021)*Description:*

- (1) Very worried
- (2) Somewhat worried
- (3) Not so worried
- (4) Not at all worried
- (99) Don't know/Refused

2.6.3.41 How would you rate how the authorities are handling the COVID-19 virus in your area? (q32)*Long tag:* qog_eqi_ind_21_q32*Original tag:* q32*Dataset citation:* Charron et al. (2021)*Description:*

- (1) Very good
- (2) Somewhat good
- (3) Somewhat bad
- (4) Very bad
- (99) Don't know/Refused

2.6.3.42 Length of survey (length)*Long tag:* qog_eqi_ind_21_length*Original tag:* length*Dataset citation:* Charron et al. (2021)*Description:*

Length of survey in seconds, only for online survey.

2.6.4 Weights

NA

2.6.4.1 The design weight (dweight)*Long tag:* qog_eqi_ind_21_dweight*Original tag:* Dweight*Dataset citation:* Charron et al. (2021)*Description:*

Design weights are included to compensate for the fact that certain people have a higher or lower likelihood of being selected for the survey than others. Please check section 1.4 of this codebook for detailed information on design weights.

2.6.4.2 The population weight (country) (pweight)*Long tag:* qog_eqi_ind_21_pweight*Original tag:* Pweight*Dataset citation:* Charron et al. (2021)*Description:*

The population weight is included for comparisons across countries and is included to adjust for a country's proportion in the sample relative to its actual population of the total population of all countries in the survey. Please check section 1.4 of this codebook for detailed information on population weights.

2.6.4.3 The post-stratification weight by survey admin (age, gender, education) (psweight_a)

Long tag: qog_eqi_ind_21_psweight_a

Original tag: PSweight_a

Dataset citation: Charron et al. (2021)

Description:

The individual post stratification weights help to adjust the sample to better match the population on general demographic characteristics. Please check section 1.4 of this codebook for detailed information on stratification weights.

2.6.4.4 The post-stratification weight overall(age, gender, education) (psweight_o)

Long tag: qog_eqi_ind_21_psweight_o

Original tag: PSweight_o

Dataset citation: Charron et al. (2021)

Description:

The individual post stratification weights help to adjust the sample to better match the population on general demographic characteristics. Please check section 1.4 of this codebook for detailed information on stratification weights.

2.6.4.5 Partisanship weight (party_w)

Long tag: qog_eqi_ind_21_party_w

Original tag: Party_W

Dataset citation: Charron et al. (2021)

Description:

This variable indicates a respondent's weight for their preferred political party (asked in each EQI survey in a closed question with a specific list of sitting parties and any new parties expected to reach parliament) in the sample in relation to their party's proportional support in the population. Please check section 1.4 of this codebook for detailed information on partisanship weights.

2.6.4.6 Partisanship weight, truncated (party_w_truc)

Long tag: qog_eqi_ind_21_party_w_truc

Original tag: Party_W_truc

Dataset citation: Charron et al. (2021)

Description:

This variable indicates a respondent's weight for their preferred political party (asked in each EQI survey in a closed question with a specific list of sitting parties and any new parties expected to reach parliament) in the sample in relation to their party's proportional support in the population. Please check section 1.4 of this codebook for detailed information on partisanship weights.

2.7 QoG European Quality of Government Index Regional Level (2010, 2013, 2017 & 2021)

Dataset tag: qog_eqi_long

Output Unit: QoG NUTS Region-Year, i.e., data is collected per European NUTS region and year. This means that every row in the dataset can be identified through a combination of region and year. The unit can be expressed using the columns `region_code` and `year`. The unit can also be expressed through a combination of the columns `nuts0`, `nuts1`, `nuts2` and `year` or `name` and `year`.

Description: This index focuses on both perceptions and experiences with public sector corruption, along with the extent to which citizens believe various public sector services are

impartially allocated and of good quality in the EU.

Dataset citation: Charron, Nicholas, Victor Lapuente & Monika Bauhr. 2021. Sub-national Quality of Government in EU Member States: Presenting the 2021 European Quality of Government Index and its relationship with Covid-19 indicators. University of Gothenburg: The QoG Working Paper Series 2021:4.

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust their license without previous warning.

More detailed information on the dataset can be found at the following web page: <https://www.gu.se/en/quality-government/qog-data/data-downloads/european-quality-of-government-index>

2.7.1 Identification Variables

This section includes variables which identify observations by year, country, and region.

2.7.1.1 NUTS code of region (region_code)

Long tag: qog_eqi_long_region_code

Original tag: region_code

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Numerical code of the region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

2.7.1.2 Name of region (name)

Long tag: qog_eqi_long_name

Original tag: name

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Name of the region in English.

2.7.1.3 Year (year)

Long tag: qog_eqi_long_year

Original tag: year

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Year of observation. If you are using data from previous waves (2010, 2013 and 2017), please also check *“Suggestion Citation for Previous Waves”*.

2.7.1.4 EQI region code (eqiregion)

Long tag: qog_eqi_long_eqiregion

Original tag: EQIregion

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI region code.

2.7.1.5 NUTS Level (nuts_level)

Long tag: qog_eqi_long_nuts_level

Original tag: nuts_level

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

To what level of NUTS belong observation. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

(0) Country level

(1) Major socio-economic regions

(2) Basic regions for the application of regional policies

2.7.1.6 NUTS0 abbreviation code (nuts0)

Long tag: qog_eqi_long_nuts0

Original tag: nuts0

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Code of NUTS0 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 0: country level.

2.7.1.7 NUTS1 abbreviation code (nuts1)

Long tag: qog_eqi_long_nuts1

Original tag: nuts1

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Code of NUTS1 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions.

2.7.1.8 NUTS2 abbreviation code (nuts2)

Long tag: qog_eqi_long_nuts2

Original tag: nuts2

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Code of NUTS2 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 2: basic regions for the application of regional policies.

2.7.1.9 Name of the country (cname)

Long tag: qog_eqi_long_cname

Original tag: cname

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Name of the country where the region is located in English.

2.7.2 Regional Level Variables

This section includes QoG EQI regional-level variables.

2.7.2.1 European Quality Index (EQI) (eqi)

Long tag: qog_eqi_long_eqi

Original tag: EQI

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final EQI index (centered around WGI), all units. The construction of EQI Index starts by taking the country average from the WGI data for four indicators: ‘control of corruption’, ‘government effectiveness’, ‘rule of law’ and ‘voice and accountability’ and combine the four into one composite index (equal weighting). Then, the combined WGI data is standardized for the EU sample. This figure is used as country’s mean score in the EQI for all 30 countries⁴.

In previous rounds, we then took the standardized sample mean for 2015 WGI data and set each country’s national average as such. A key difference in this round (and retrospectively in other two rounds) we now aggregate to the WGI at the pillar levels of corruption impartiality and quality in order to better make use of these three distinct concepts empirically.

The regional data itself combines 18 survey questions about QoG in the region. In building the regional index, we re-score each variable so that higher numbers equate to higher QoG and then the 18 questions/indicators to three pillars based on factor analysis, then we averaged these three pillars together to form the final index figure for each region. After each stage of aggregation, the data are standardized.

For data for the regional pillars’ score for each of the countries included in the 2017 regional survey, weighting each region’s score by their share of the national population. This figure is thus used to explain regional variation only within each country included (not absolute levels of QoG). We then subtract this mean score from each region’s individual pillar score from the regional study, which shows if the region is above or below its national average and by how much. This figure is then added to the national level, WGI data, so each region has an adjusted score for each of the three pillars, centered on the respective WGI indicators. It is worth mentioning that none of the regional variation from the regional index is lost during this merging process; the country mean of all regional scores is simply adjusted. The formula employed is the following:

$$EQI_{regionXincountryY} = WGI_{countryY} + (Rqog_{regionXincountryY} CRqog_{countryY}) \quad (2)$$

where ‘EQI’ is the final score from each region or country in each pillar –corruption, impartiality and quality - of the EQI. ‘WGI’ is the World Bank’s national average for each country for each pillar, while ‘Rqog’ is each region’s score from the regional survey and ‘CRqog’ is the country average (weighted by regional population) of all regions within the country from the regional survey for each pillar. The EQI pillars are standardized so that the mean is ‘0’ with a standard deviation of ‘1’. The three pillar scores are then aggregated using equal weighting.

2.7.2.2 Lower boundary of margin of error, EQI (eqi_low_me)

Long tag: qog_eqi_long_eqi_low_me

Original tag: EQI_low_me

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Lower boundary of margin of error for EQI score.

2.7.2.3 Upper boundary of margin of error, EQI (eqi_high_me)

Long tag: qog_eqi_long_eqi_high_me

Original tag: EQI_high_me

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Upper boundary of margin of error for EQI score.

2.7.2.4 Quality pillar (qualityp)

Long tag: qog_eqi_long_qualityp

Original tag: qualityp

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.7.2.5 Impartiality pillar (impartialityp)

Long tag: qog_eqi_long_impartialityp

Original tag: impartialityp

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.7.2.6 Corruption pillar (corruptionp)

Long tag: qog_eqi_long_corruptionp

Original tag: corruptionp

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and z-score standardized. We aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.7.2.7 Corruption perception sub-pillar (corruption_subexp)

Long tag: qog_eqi_long_corruption_subexp

Original tag: corruption_subExp

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption perceptions index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.7.2.8 Corruption experience sub-pillar (corruption_subper)

Long tag: qog_eqi_long_corruption_subper

Original tag: corruption_subPer

Dataset citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption experiences index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.8 QoG EU Regional Dataset Long Data

Dataset tag: qog_eureg_long

Output Unit: QoG NUTS Region-Year, i.e., data is collected per European NUTS region and year. This means that every row in the dataset can be identified through a combination of region and year. The unit can be expressed using the columns `region_code` and `year`. The unit can also be expressed through a combination of the columns `nuts0`, `nuts1` `nuts2` and `year`.

Description: The QoG EU Regional dataset is a dataset consisting of more than 300 variables covering three levels of European regions - Nomenclature of Territorial Units for Statistics (NUTS): NUTS0 (country), NUTS1(major socio-economic regions) and NUTS2 (basic regions for the application of regional policies).

The QoG Regional Data is presented in three different forms available in separate datasets. The variables are the same across all three datasets besides a varying suffix (`_nuts0`, `_nuts1`, `_nuts2`) indicating which NUTS level is represented.

All datasets are available in time-series format. The first one (The QoG Regional Data - Long Form) is a dataset where data is presented in the long form. The list of units of analysis contains regions of all NUTS levels.

Two other datasets are presented in the wide form for multilevel analysis. In the second dataset (The QoG Regional Data - Wide Form NUTS1) includes NUTS1 level as the unit of analysis and variables represent the values for this level and corresponding lower level – NUTS0. As an example, in this dataset the data is presented only for East Sweden(Ostra Sverige SE1), as a unit of analysis and has values for lower levels of this region - Sweden (SE).

In the third dataset (The QoG Regional Data - Wide Form NUTS2) the unit of analysis is NUTS2 level regions and variables provide values as for every unit of analysis, as well as for corresponding lower NUTS levels: NUTS1 and NUTS0. One example of unit of analysis in this dataset is Stockholm (SE11) and data for every variable will be for Stockholm, as well as for lower level regions - East Sweden (Ostra Sverige SE1) and Sweden (SE).

More detailed information on the dataset can be found at the following web page:
<https://www.gu.se/en/quality-government/qog-data/data-downloads/eu-regional-dataset>

2.8.1 Identification

Identification variables in the dataset.

2.8.1.1 NUTS code of region (region_code)

Long tag: qog_eureg_long_region_code

Original tag: region_code

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

NUTS code of region. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

2.8.1.2 Name of the region (region_name)

Long tag: qog_eureg_long_region_name

Original tag: region_name

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Name of the region in the language of the country.

2.8.1.3 Year (year)

Long tag: qog_eureg_long_year

Original tag: year

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Year of observation

2.8.1.4 The Nomenclature of Territorial Units for Statistics (NUTS) level (level)

Long tag: qog_eureg_long_level

Original tag: level

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

To what level of NUTS belong observation. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

(0) Country level;

(1) Major socio-economic regions;

(2) Basic regions for the application of regional policies.

2.8.1.5 Code of NUTS0 level region (nuts0)

Long tag: qog_eureg_long_nuts0

Original tag: nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Code of NUTS0 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 0: country level.

2.8.1.6 Code of NUTS1 level region (nuts1)

Long tag: qog_eureg_long_nuts1

Original tag: nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Code of NUTS1 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions.

2.8.1.7 Code of NUTS2 level region (nuts2)

Long tag: qog_eureg_long_nuts2

Original tag: nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Code of NUTS2 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 2: basic regions for the application of regional policies.

2.8.1.8 Country name (cname)

Long tag: qog_eureg_long_cname

Original tag: cname

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Name of the country in English

2.8.1.9 Country Number (country_nr)

Long tag: complab_spin_scip_country_nr

Original tag: country_nr

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Added country identifier to synchronize Complab Country variables. Contains ISO numeric code.

2.8.1.10 Country (country_code)

Long tag: complab_spin_scip_country_code

Original tag: country_code

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Added country identifier to synchronize Complab Country variables. Contains three-letter ISO code.

2.8.2 Quality of Government

This category includes variables that are the core features of QoG (impartiality, bureaucratic quality and corruption) as well as measures that are broader (rule of law and transparency).

2.8.2.1 Number of awarded contracts above 130,000 EUR (cri_contr)

Long tag: qog_eureg_long_cri_contr

Original tag: cri_contr

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

2.8.2.2 Final value of awarded tenders of over 130,000 EUR (cri_cvalue)

Long tag: qog_eureg_long_cri_cvalue

Original tag: cri_cvalue

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Sum of the final value of successfully awarded tenders published on TED above 130k EUR threshold.

2.8.2.3 Share of contracts with only one bid in total (cri_singleb)

Long tag: qog_eureg_long_cri_singleb

Original tag: cri_singleb

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with only one bid in total.

2.8.2.4 Share of contracts with no published call for tender red flag (cri_nocall)

Long tag: qog_eureg_long_cri_nocall

Original tag: cri_nocall

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'no published call for tender' red flag. A contract is considered to have 'no call for tender' red flag if two conditions are met: i) The sum of prior information notices and contract notices equals 0 and ii) The country of a buyer is not on the list of countries in which 'no call for tender publication' is not a risk factor. These countries are BG, DK, EE, ES, and LT.

2.8.2.5 Share of contracts with non-open procedure red flag (cri_nonopen)

Long tag: qog_eureg_long_cri_nonopen

Original tag: cri_nonopen

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'non-open procedure' red flag. Whether a procedure is considered non-open depends on procedure type as well as specific country regulation. Please refer to the 'Non-open procedure details' sheet to search for country-procedure combinations.

2.8.2.6 Share of contracts with tax haven red flag (cri_taxhav)

Long tag: qog_eureg_long_cri_taxhav

Original tag: cri_taxhav

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'tax haven' red flag. A contract has a 'tax haven' red flag in case two conditions are met: i) buyer and supplier are from different countries and ii) according to Financial Secrecy Index (<https://www.financialsecrecyindex.com/en/>) supplier country was classified as a tax haven.

2.8.2.7 EQI Index Score (eqi_score)

Long tag: qog_eureg_long_eqi_score

Original tag: eqi_score

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final score of European Quality Index (centered around WGI), all units. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#).

2.8.2.8 Quality pillar, country centered and z-score standardized (eqi_zquality)

Long tag: qog_eureg_long_eqi_zquality

Original tag: eqi_zquality

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI quality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.8.2.9 Impartiality pillar, country centered and z-score standardized (eqi_zimpartiality)

Long tag: qog_eureg_long_eqi_zimpartiality

Original tag: eqi_zimpartiality

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI impartiality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that

each of question assessing impartiality in the provision of public services is now a regional ‘indicator’. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into ‘impartiality pillar’.

2.8.2.10 Corruption pillar, country centered and z-score standardized (eqi_zcorruption)

Long tag: qog_eureg_long_eqi_zcorruption

Original tag: eqi_zcorruption

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores (‘survey question’) to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional ‘indicator’. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called ‘experience’ and ‘perceptions’. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.8.2.11 Corruption perceptions index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptper)

Long tag: qog_eureg_long_eqi_zcorruptper

Original tag: eqi_zcorruptper

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption perceptions index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.8.2.12 Corruption experiences index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptexp)

Long tag: qog_eureg_long_eqi_zcorruptexp

Original tag: eqi_zcorruptexp

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption experiences index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.8.2.13 EQI index, min-max (0-100) standardized (eqi_norm_eqi)

Long tag: qog_eureg_long_eqi_norm_eqi

Original tag: eqi_norm_eqi

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI index, min-max (0-100) standardized. Detailed information on its calculation method and

indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.8.2.14 Quality pillar, country centered and min-max (0-100) standardized (eqi_norm_qual)

Long tag: qog_eureg_long_eqi_norm_qual

Original tag: eqi_norm_qual

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and min-max (0-100) standardized.

2.8.2.15 Impartiality pillar, country centered and min-max (0-100) standardized (eqi_norm_impart)

Long tag: qog_eureg_long_eqi_norm_impart

Original tag: eqi_norm_impart

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and min-max (0-100) standardized.

2.8.2.16 Corruption pillar, country centered and min-max (0-100) standardized (eqi_norm_corrupt)

Long tag: qog_eureg_long_eqi_norm_corrupt

Original tag: eqi_norm_corrupt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and min-max (0-100) standardized.

2.8.2.17 Corruption perceptions index (corruption sub-pillar) min-max (0-100)(2017) (eqi_norm_corruptper)

Long tag: qog_eureg_long_eqi_norm_corruptper

Original tag: eqi_norm_corruptper

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption perceptions index (corruption sub-pillar), min-max (0-100) standardized.

2.8.2.18 Corruption experiences index (corruption sub-pillar) min-max (0-100) (2017) (eqi_norm_corruptexp)

Long tag: qog_eureg_long_eqi_norm_corruptexp

Original tag: eqi_norm_corruptexp

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption experiences index (corruption sub-pillar) min-max (0-100) standardized.

2.8.3 Demographics

This category includes variables describing the demographic characteristics of a population, such as its size, life-expectancy, fertility rates and death rates.

2.8.3.1 Reported number of cases of burglary of private premises (eu_cri_bur)

Long tag: qog_eureg_long_eu_cri_bur

Original tag: eu_cri_bur

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of burglary of private premises. Domestic burglary is defined as gaining access to a dwelling by the use of force to steal goods.

2.8.3.2 Reported number of cases of intentional homicide (eu_cri_inthom)

Long tag: qog_eureg_long_eu_cri_inthom

Original tag: eu_cri_inthom

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of intentional homicide. It is defined as intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. Causing death by dangerous driving is excluded, as are abortion and help with suicide. Attempted (uncompleted) homicide is also excluded. The counting unit for homicide is normally the victim (rather than the case).

2.8.3.3 Reported number of cases of robbery (eu_cri_rob)

Long tag: qog_eureg_long_eu_cri_rob

Original tag: eu_cri_rob

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of robbery. Robbery is a sub-set of violent crime (see above). It is defined as stealing from a person with force or threat of force, including muggings (bag-snatching) and theft with violence. Pick-pocketing, extortion and blackmailing are generally not included.

2.8.3.4 Proportion of live births outside marriage (eu_agemoth)

Long tag: qog_eureg_long_eu_agemoth

Original tag: eu_agemoth

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Proportion of live births outside marriage. A live birth outside marriage is defined as a live birth where the mother's marital status at the time of birth is other than married.

2.8.3.5 Total fertility rate (eu_agemoth1)

Long tag: qog_eureg_long_eu_agemoth1

Original tag: eu_agemoth1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total fertility rate. It is defined as the mean number of children who would be born to a woman during her lifetime, if she were to spend her childbearing years conforming to the age-specific fertility rates, that have been measured in a given year.

2.8.3.6 Mean age of women at childbirth (eu_nmarpct)

Long tag: qog_eureg_long_eu_nmarpct

Original tag: eu_nmarpct

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at childbirth. It is calculated as the mean age of women when their children are born.

2.8.3.7 Mean age of women at birth of first child (eu_totferrt)

Long tag: qog_eureg_long_eu_totferrt

Original tag: eu_totferrt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at birth of first child. It is calculated as the mean age of women when their first children are born.

2.8.3.8 Number of deaths of females, all ages (eu_death_totalf)

Long tag: qog_eureg_long_eu_death_totalf

Original tag: eu_death_totalf

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.9 Number of deaths of males, all ages (eu_death_totalm)

Long tag: qog_eureg_long_eu_death_totalm

Original tag: eu_death_totalm

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.10 Number of deaths, total all ages (eu_death_totalt)

Long tag: qog_eureg_long_eu_death_totalt

Original tag: eu_death_totalt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.11 Number of deaths of females, at 1 year old (eu_death_y1f)

Long tag: qog_eureg_long_eu_death_y1f

Original tag: eu_death_y1f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.12 Number of deaths of males, at 1 year old (eu_death_y1m)

Long tag: qog_eureg_long_eu_death_y1m

Original tag: eu_death_y1m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.13 Number of deaths, total at 1 year old (eu_death_y1t)

Long tag: qog_eureg_long_eu_death_y1t

Original tag: eu_death_y1t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.14 Number of deaths of females, at 20 years old (eu_death_y20f)

Long tag: qog_eureg_long_eu_death_y20f

Original tag: eu_death_y20f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 20 years old. Death means the permanent disappearance of

all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.15 Number of deaths of males, at 20 years old (eu_death_y20m)

Long tag: qog_eureg_long_eu_death_y20m

Original tag: eu_death_y20m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.16 Number of deaths, total at 20 years old (eu_death_y20t)

Long tag: qog_eureg_long_eu_death_y20t

Original tag: eu_death_y20t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.17 Number of deaths of females, at 50 years old (eu_death_y50f)

Long tag: qog_eureg_long_eu_death_y50f

Original tag: eu_death_y50f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.18 Number of deaths of males, at 50 years old (eu_death_y50m)

Long tag: qog_eureg_long_eu_death_y50m

Original tag: eu_death_y50m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.19 Number of deaths, total at 50 years old (eu_death_y50t)

Long tag: qog_eureg_long_eu_death_y50t

Original tag: eu_death_y50t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.20 Number of deaths of females, at 70 years old (eu_death_y70f)

Long tag: qog_eureg_long_eu_death_y70f

Original tag: eu_death_y70f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.21 Number of deaths of males, at 70 years old (eu_death_y70m)

Long tag: qog_eureg_long_eu_death_y70m

Original tag: eu_death_y70m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.22 Number of deaths, total at 70 years old (eu_death_y70t)

Long tag: qog_eureg_long_eu_death_y70t

Original tag: eu_death_y70t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.8.3.23 Population at 1st January, Female (eu_d2jan_f)

Long tag: qog_eureg_long_eu_d2jan_f

Original tag: eu_d2jan_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female population as of 1st January of the year indicated. It is based on concept of usual resident population, i.e. the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population figures can be based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers. Usually resident population means all persons having usual residence in a country at the reference time. Usual

residence means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The following persons alone are considered to be usual residents of the geographical area in question: a) those who have lived in their place of usual residence for a continuous period of at least 12 months before the reference time; or b) those who arrived in their place of usual residence during the 12 months before the reference time with the intention of staying there for at least one year.

2.8.3.24 Population at 1st January, Male (eu_d2jan_m)

Long tag: qog_eureg_long_eu_d2jan_m

Original tag: eu_d2jan_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Male population as of 1st January of the year indicated. It is based on concept of usual resident population, i.e. the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population figures can be based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers. Usually resident population means all persons having usual residence in a country at the reference time. Usual residence means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The following persons alone are considered to be usual residents of the geographical area in question: a) those who have lived in their place of usual residence for a continuous period of at least 12 months before the reference time; or b) those who arrived in their place of usual residence during the 12 months before the reference time with the intention of staying there for at least one year.

2.8.3.25 Population at 1st January, Total (eu_d2jan_t)

Long tag: qog_eureg_long_eu_d2jan_t

Original tag: eu_d2jan_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total population as of 1st January of the year indicated. It is based on concept of usual resident population, i.e. the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population figures can be based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers. Usually resident population means all persons having usual residence in a country at the reference time. Usual residence means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. 2.8.3.26 Area of a region, land area total, sq km (eu_d3area_lat)

Long tag: qog_eureg_long_eu_d3area_lat

Original tag: eu_d3area_lat

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli

(2020)

Variable citation: European Commission (2023)

Description:

Total land area of a region as square kilometer. Total Land Area (TLA) is defined as total surface area excluding lakes, rivers, transitional and coastal waters. Mountainous regions, glaciers, forests, wetlands and other temporarily or permanently uninhabitable regions are included in TLA.

2.8.3.27 Area of a region, total, sq km (eu_d3area_t)

Long tag: qog_eureg_long_eu_d3area_t

Original tag: eu_d3area_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total surface area of a region as square kilometer. Total Surface Area (TSA) is defined as the area of any given statistical area and includes land area and inland waters (lakes, rivers etc.). The sub-national areas (e.g. LAU and NUTS areas) defined by statistical and/or administrative boundaries are the building blocks for calculating both concepts. By definition Total Surface Area does not cover areas that are not statistical areas.

2.8.3.28 Population density, average population per square km (eu_per_km2)

Long tag: qog_eureg_long_eu_per_km2

Original tag: eu_per_km2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Average population density per square km. Population density is the ratio of the (annual average) population of a region to the (land) area of the region; total area (including inland waters) is used when land area is not available.

2.8.3.29 Fertility rate, total (eu_frate_total)

Long tag: qog_eureg_long_eu_frate_total

Original tag: eu_frate_total

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total fertility rate. It is the mean number of children that would be born alive to a woman during her lifetime if she were to pass through her childbearing years conforming to the fertility rates by age of a given year.

2.8.3.30 Fertility rate, at age 15 (eu_frate_y15)

Long tag: qog_eureg_long_eu_frate_y15

Original tag: eu_frate_y15

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 15. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 15 to the average female population of age 15.

2.8.3.31 Fertility rate, at age 30 (eu_frate_y30)

Long tag: qog_eureg_long_eu_frate_y30

Original tag: eu_frate_y30

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 30. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 30 to the average female population of age 30.

2.8.3.32 Fertility rate, at age 35 (eu_frate_y35)

Long tag: qog_eureg_long_eu_frate_y35

Original tag: eu_frate_y35

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 35. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 35 to the average female population of age 35.

2.8.3.33 Life expectancy in years at 1 year old, female (eu_mlifexp_f)

Long tag: qog_eureg_long_eu_mlifexp_f

Original tag: eu_mlifexp_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, female. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.8.3.34 Life expectancy in years at 1 year old, male (eu_mlifexp_m)

Long tag: qog_eureg_long_eu_mlifexp_m

Original tag: eu_mlifexp_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, male. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.8.3.35 Life expectancy in years at 1 year old, total (eu_mlifexp_t)

Long tag: qog_eureg_long_eu_mlifexp_t

Original tag: eu_mlifexp_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, total. Life expectancy at given exact age is the mean

number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.8.3.36 Crude rate of net migration plus statistical adjustment (eu_cnmigratrt)

Long tag: qog_eureg_long_eu_cnmigratrt

Original tag: eu_cnmigratrt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of net migration plus statistical adjustment. Net migration including statistical adjustments the ratio of the net migration including statistical adjustment during the year to the average population in that year. The value is expressed per 1000 inhabitants. The crude rate of net migration is equal to the difference between the crude rate of population change and the crude rate of natural change (that is, net migration is considered as the part of population change not attributable to births and deaths). It is calculated in this way because immigration or emigration flows are either not available or the figures are not reliable.

2.8.3.37 Crude rate of total population change (eu_growrt)

Long tag: qog_eureg_long_eu_growrt

Original tag: eu_growrt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of total population change. It is the ratio of the total population change during the year to the average population of the area in question in that year. The value is expressed per 1000 inhabitants.

2.8.3.38 Crude rate of natural change of population (eu_natgrowrt)

Long tag: qog_eureg_long_eu_natgrowrt

Original tag: eu_natgrowrt

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of natural change. It is the ratio of natural change over a period to the average population of the area in question during that period. The value is expressed per 1000 inhabitants.

2.8.4 Education

This category includes a variety of indicators related to education, such as educational attainment, the students (age, gender, educational level), and educational outcomes.

2.8.4.1 Educational attainment for ages 25 to 64, primary education, Female (eu_edatt_ed02_y2564f)

Long tag: qog_eureg_long_eu_edatt_ed02_y2564f

Original tag: eu_edatt_ed02_y2564f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.8.4.2 Educational attainment for ages 25 to 64, primary education, Male (eu_edatt_ed02_y2564m)

Long tag: qog_eureg_long_eu_edatt_ed02_y2564m

Original tag: eu_edatt_ed02_y2564m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old males whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.8.4.3 Educational attainment for ages 25 to 64, primary education, Total (eu_edatt_ed02_y2564t)

Long tag: qog_eureg_long_eu_edatt_ed02_y2564t

Original tag: eu_edatt_ed02_y2564t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old population whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.8.4.4 Educational attainment for ages 25 to 64, secondary education, Female (eu_edatt_ed34_y2564f)

Long tag: qog_eureg_long_eu_edatt_ed34_y2564f

Original tag: eu_edatt_ed34_y2564f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). This aggregate corresponds to ISCED 2011 levels 3 and 4 (online code ED3_4). ISCED 2011 level 3 programmes of partial level completion are considered within ISCED level 3. Data up to 2013 refer to ISCED 1997 levels 3C long, 3A, 3B and 4.

2.8.4.5 Educational attainment for ages 25 to 64, secondary education, Male (eu_edatt_ed34_y2564m)

Long tag: qog_eureg_long_eu_edatt_ed34_y2564m

Original tag: eu_edatt_ed34_y2564m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old males whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). This aggregate corresponds to ISCED 2011 levels 3 and 4 (online code ED3_4). ISCED 2011 level 3 programmes of partial level completion are considered within ISCED level 3. Data up to 2013 refer to ISCED 1997 levels 3C long, 3A, 3B and 4.

2.8.4.6 Educational attainment for ages 25 to 64, secondary education, Total (eu_edatt_ed34_y2564t)

Long tag: qog_eureg_long_eu_edatt_ed34_y2564t

Original tag: eu_edatt_ed34_y2564t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old population whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). This aggregate corresponds to ISCED 2011 levels 3 and 4 (online code ED3_4). ISCED 2011 level 3 programmes of partial level completion are considered within ISCED level 3. 2.8.4.19 Early leavers from education and training as a percentage, Female (eu_eduleave_f)

Long tag: qog_eureg_long_eu_eduleave_f

Original tag: eu_eduleave_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female early leavers from education and training as a percentage of the population aged 18-24 with at most lower secondary education and not in further education or training. The indicator is defined as the percentage of the population aged 18-24 with at most lower secondary education and who were not in further education or training during the last four weeks preceding the survey. Lower secondary education refers to ISCED (International Standard Classification of Education) 2011 level 0-2 for data from 2014 onwards and to ISCED 1997 level 0-3C short for data up to 2013. The indicator is based on the EU Labour Force Survey.

2.8.4.20 Early leavers from education and training as a percentage, Male (eu_eduleave_m)

Long tag: qog_eureg_long_eu_eduleave_m

Original tag: eu_eduleave_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Male early leavers from education and training as a percentage of the population aged 18-24 with at most lower secondary education and not in further education or training. The indicator is defined as the percentage of the population aged 18-24 with at most lower secondary education and who were not in further education or training during the last four weeks preceding the survey. Lower secondary education refers to ISCED (International Standard Classification of Education) 2011 level 0-2 for data from 2014 onwards and to ISCED 1997 level 0-3C short for data up to 2013. The indicator is based on the EU Labour Force Survey.

2.8.4.21 Early leavers from education and training as a percentage, Total (eu_eduleave_t)

Long tag: qog_eureg_long_eu_eduleave_t

Original tag: eu_eduleave_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Early leavers from education and training as a percentage of the population aged 18-24 with at most lower secondary education and not in further education or training. The indicator is defined as the percentage of the population aged 18-24 with at most lower secondary education and who were not in further education or training during the last four weeks preceding the survey. The indicator is based on the EU Labour Force Survey.

2.8.4.22 15-24 year old neither in employment nor in education as percentage, female (eu_neet_y1524f)

Long tag: qog_eureg_long_eu_neet_y1524f

Original tag: eu_neet_y1524f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

15-24 year old females neither in employment nor in education as percentage. The indicator on young people neither in employment nor in education and training (NEET) provides information on young people aged 15 to 24 who meet the following two conditions: (a) they are not employed (i.e. unemployed or inactive according to the International Labour Organisation definition) and (b) they have not received any education or training in the four weeks preceding the survey. Data are expressed as a percentage of the total population in the same age group and sex, excluding the respondents who have not answered the question 'participation to education and training'. Data come from the European Union Labour Force Survey.

2.8.4.23 15-24 year old neither in employment nor in education as percentage, male (eu_neet_y1524m)

Long tag: qog_eureg_long_eu_neet_y1524m

Original tag: eu_neet_y1524m

2.8.4.25 Employment rate for people between 15-34 years, total duration since education (eu_empl_durtotal)

Long tag: qog_eureg_long_eu_empl_durtotal

Original tag: eu_empl_durtotal

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, total duration since completion of highest level of education. The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.26 Employment rate for people between 15-34 years, over 3 years since education (eu_empl_dury_gt3)

Long tag: qog_eureg_long_eu_empl_dury_gt3

Original tag: eu_empl_dury_gt3

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, over 3 years since completion of highest level of education. The indicator is defined as the percentage of the population aged 15-34,

who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.27 Employment rate for people between 15-34 years, 1 to 3 years since education (eu_empl_dury13)

Long tag: qog_eureg_long_eu_empl_dury13

Original tag: eu_empl_dury13

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, 1 to 3 years since completion of highest level of education. The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.28 Employment rate for people between 15-34 years, education levels 0-2 (eu_empl_edled02)

Long tag: qog_eureg_long_eu_empl_edled02

Original tag: eu_empl_edled02

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.29 Employment rate for people between 15-34 years, education levels 3-4 (eu_empl_edled34)

Long tag: qog_eureg_long_eu_empl_edled34

Original tag: eu_empl_edled34

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.30 Employment rate for people between 15-34 years, education levels 5-8 (eu_empl_edled58)

Long tag: qog_eureg_long_eu_empl_edled58

Original tag: eu_empl_edled58

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, whose the highest level of education

successfully completed is tertiary education (levels 5-8). The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.31 Employment rate for people between 15-34 years, all education levels (eu_empl_edltotal)

Long tag: qog_eureg_long_eu_empl_edltotal

Original tag: eu_empl_edltotal

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total employment rate for people between 15 and 34 years for all education levels. The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.8.4.32 Participation rate in Primary and lower secondary education (eu_epred12)

Long tag: qog_eureg_long_eu_epred12

Original tag: eu_epred12

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Participation rate in primary and lower secondary education (levels 1-2). Countries participating in this collection are compiling their data according to the concepts and definitions of the UOE data collection manuals on education systems statistics. This aggregate refers to levels 1 and 2 of the ISCED 2011 (online code ED1-2).

2.8.4.33 Participation rate in Tertiary education (eu_epred58)

Long tag: qog_eureg_long_eu_epred58

Original tag: eu_epred58

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Participation rate in tertiary education (level 5-8). Countries participating in this collection are compiling their data according to the concepts and definitions of the UOE data collection manuals on education systems statistics. This aggregate covers ISCED 2011 levels 5, 6, 7 and 8 (short-cycle tertiary education, bachelor's or equivalent level, master's or equivalent level, doctoral or equivalent level, online code ED5-8 'tertiary education').

2.8.4.34 Participation rate in education and training (last 4 weeks), females (eu_epry2564f)

Long tag: qog_eureg_long_eu_epry2564f

Original tag: eu_epry2564f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female participation rate in education and training during the last four weeks preceding the survey. The participation rate in education and training covers participation in formal and

non-formal education and training. The reference period for the participation in education and training is the four weeks prior to the interview. Formal education is defined by ISCED as ‘education that is institutionalised, intentional and planned through public organisations and recognised private bodies, and – in their totality – constitute the formal education system of a country. Formal education programmes are thus recognised as such by the relevant national education or equivalent authorities, e.g. any other institution in cooperation with the national or sub-national education authorities.’ Non-formal education and training is defined as any institutionalised, intentional and organised/planned learning activities outside the formal education system. According to the classification of learning activities (CLA 2016), non-formal education and training comprises courses, seminars and workshops, private lessons or instructions and guided-on-the-job training. However, non-formal education as measured in the EU-LFS excludes guided-on-the-job training. The information collected covers both job-related (professional) and non-job related (personal, social, ‘leisure’) education and training activities.

2.8.4.35 Participation rate in education and training (last 4 weeks), males (eu_epry2564m)

Long tag: qog_eureg_long_eu_epry2564m

Original tag: eu_epry2564m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Male participation rate in education and training during the last four weeks preceding the survey. The participation rate in education and training covers participation in formal and non-formal education and training. The reference period for the participation in education and training is the four weeks prior to the interview. Formal education is defined by ISCED as ‘education that is institutionalised, intentional and planned through public organisations and recognised private bodies, and – in their totality – constitute the formal education system of a country. Formal education programmes are thus recognised as such by the relevant national education or equivalent authorities, e.g. any other institution in cooperation with the national or sub-national education authorities.’ Non-formal education and training is defined as any institutionalised, intentional and organised/planned learning activities outside the formal education system. However, non-formal education as measured in the EU-LFS excludes guided-on-the-job training. The information collected covers both job-related (professional) and non-job related (personal, social, 'leisure') education and training activities.

2.8.5 Environment

This category includes indicators related to temperature and municipal waste.

2.8.5.1 Municipal waste disposal - incineration in thousand tonnes (eu_env_wasdsp_i)

Long tag: qog_eureg_long_eu_env_wasdsp_i

Original tag: eu_env_wasdsp_i

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste disposal, incineration in thousand tonnes. Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.8.5.2 Municipal waste generated in thousand tonnes (eu_env_wasgen)

Long tag: qog_eureg_long_eu_env_wasgen

Original tag: eu_env_wasgen

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste generated in thousand tonnes. Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.8.5.3 Municipal waste recovery - energy recovery in thousand tonnes (eu_env_wasrcv_e)

Long tag: qog_eureg_long_eu_env_wasrcv_e

Original tag: eu_env_wasrcv_e

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste energy recovery in thousand tonnes. Energy recovery is defined as the incineration that fulfils the energy efficiency criteria laid down in the Waste Framework Directive (2008/98/EC), Annex II (recovery operation R1). Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.8.5.4 Municipal waste recycling in thousand tonnes (eu_env_wasrcy_c_d)

Long tag: qog_eureg_long_eu_env_wasrcy_c_d

Original tag: eu_env_wasrcy_c_d

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste recycling in thousand tonnes. Recycling means any recovery operation by which waste materials are reprocessed into products, materials or substances whether for the original or other purposes. It includes the reprocessing of organic material but does not include energy recovery and the reprocessing into materials that are to be used as fuels or for backfilling operations. Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.8.5.5 Number of cooling degree days (eu_eng_cdd)

Long tag: qog_eureg_long_eu_eng_cdd

Original tag: eu_eng_cdd

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of cooling degree days (CDD). Cooling degree day (CDD) index is a weather-based technical index designed to describe the need for the cooling (air-conditioning) requirements of buildings. CDD is derived from meteorological observations of air temperature, interpolated to regular grids at 25 km resolution for Europe. Calculated gridded CDD is aggregated and subsequently presented on NUTS-2 level, for 2017 and 2018 also on NUTS-3 level.

2.8.5.6 Number of heating degree days (eu_eng_hdd)

Long tag: qog_eureg_long_eu_eng_hdd

Original tag: eu_eng_hdd

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of heating degree days (HDD). Heating degree day (HDD) index is a weather-based technical index designed to describe the need for the heating energy requirements of buildings. HDD is derived from meteorological observations of air temperature, interpolated to regular

grids at 25 km resolution for Europe. Calculated gridded HDD is aggregated and subsequently presented on NUTS-2 level, for 2017 and 2018 also on NUTS-3 level.

2.8.6 Health

This category includes indicators describing the health of a population in a given country. These include reports about the prevalence of infectious diseases, and indicators such as birth rate, death rate, life expectancy. It also provides information on the capacity of the health care system, such as the number of hospital beds available.

2.8.6.1 Number of deaths by circulatory system diseases, female (eu_he_a_cs_f)

Long tag: qog_eureg_long_eu_he_a_cs_f

Original tag: eu_he_a_cs_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by circulatory system diseases, female. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.2 Number of deaths by circulatory system diseases, male (eu_he_a_cs_m)

Long tag: qog_eureg_long_eu_he_a_cs_m

Original tag: eu_he_a_cs_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by circulatory system diseases, male. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.3 Number of deaths by circulatory system diseases, total (eu_he_a_cs_t)

Long tag: qog_eureg_long_eu_he_a_cs_t

Original tag: eu_he_a_cs_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by circulatory system diseases, total. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.4 Number of deaths by HIV, female (eu_he_a_hiv_f)

Long tag: qog_eureg_long_eu_he_a_hiv_f

Original tag: eu_he_a_hiv_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by HIV, female. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.5 Number of deaths by HIV, male (eu_he_a_hiv_m)

Long tag: qog_eureg_long_eu_he_a_hiv_m

Original tag: eu_he_a_hiv_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by HIV, male. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.6 Number of deaths by HIV, total (eu_he_a_hiv_t)

Long tag: qog_eureg_long_eu_he_a_hiv_t

Original tag: eu_he_a_hiv_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Variable citation: European Commission (2023)

Description:

Number of deaths by pregnancy, childbirth and puerperium. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.8.6.17 Number of deaths by self-harm, female (eu_heash_f)

2.8.6.23 Available beds in hospitals (HP.1) per hundred thousand inhabitants (eu_he_a_bed)

Long tag: qog_eureg_long_eu_he_a_bed

Original tag: eu_he_a_bed

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Available beds in hospitals (HP.1) per hundred thousand inhabitants. Health care facilities data refer to available beds in hospitals (HP.1) and subcategories (such as curative care beds, rehabilitative care beds, etc.). Total hospital beds (HP.1) are all hospital beds which are regularly maintained and staffed and immediately available for the care of admitted patients. Total hospital beds are broken down as follows: i) curative care (acute care) beds; ii) rehabilitative care beds; iii) long-term care beds (excluding psychiatric care beds) and iv) other hospital beds. The definition of health care facilities follows the International Classification for Health Accounts - Providers of health care (ICHA-HP) of the System of Health Accounts (SHA).

2.8.6.24 Curative care beds in hospitals (HP.1) per hundred thousand inhabitants (eu_he_a_bedcur)

Long tag: qog_eureg_long_eu_he_a_bedcur

2.8.6.29 Dentists per hundred thousand inhabitants (eu_healedent)

Long tag: qog_eureg_long_eu_healedent

Original tag: eu_healedent

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Dentists, per hundred thousand inhabitants. Health care staff data refer to human resources available for providing health care services in the country, irrespective of the sector of employment (i.e. whether they are independent, employed by a hospital or any other health care provider). 'Manpower' categories focus on health care professionals (physicians, dentists, nursing and caring professionals, pharmacists, physiotherapists). Three different concepts are used to present the number of health care professionals: i) 'practising', i.e. health care professionals providing services directly to patients; ii) 'professionally active', i.e. 'practising' health care professionals plus health care professionals for whom their medical education is a prerequisite for the execution of the job; iii) 'licensed to practice', i.e. health care professionals who are registered and entitled to practice as health care professionals.

2.8.7 Science and Technology

This category provides information on employment rates in different sectors, for the total population as well as subgroups.

2.8.7.1 Employment in agriculture, fishing and mining, percent of tot. employment, female (eu_emtk_ab_f)

Long tag: qog_eureg_long_eu_emtk_ab_f

Original tag: eu_emtk_ab_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female employment in agriculture, forestry and fishing; mining and quarrying, as percentage of total female employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.8.7.2 Employment in agriculture, fishing and mining, percent of tot. employment, male (eu_emtk_ab_m)

In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.8.7.42 Employment in education, percent of tot. employment, total (eu_emtk_p_t)

Long tag: qog_eureg_long_eu_emtk_p_t

Original tag: eu_emtk_p_t

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment in education, as percentage of total employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.8.7.43 Employment in health and social work activities, percent of tot. employment, female (eu_emtk_q_f)

Long tag: qog_eureg_long_eu_emtk_q_f

Original tag: eu_emtk_q_f

2.8.8 Poverty and Social Exclusion

This category describes the share of the population living in or at risk of poverty.

2.8.8.1 At-risk-of-poverty rate by NUTS regions, percentage (eu_povrisk_pc)

Long tag: qog_eureg_long_eu_povrisk_pc

Original tag: eu_povrisk_pc

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population at-risk-of-poverty rate by NUTS 2 regions. The persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60 percent of the national median equivalised disposable income (after social transfers).

2.8.8.2 People (0 to 59 years) in households with low work intensity, as percent (eu_lwoin_pc)

Long tag: qog_eureg_long_eu_lwoin_pc

Original tag: eu_lwoin_pc

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Population aged 0-59 living in households with very low work intensity by NUTS regions, as a percentage of total population. People living in households with very low work intensity are people aged 0-59 living in households where the adults work less than 20percent of their total work potential during the past year.

2.8.8.3 People (0 to 59 years) in households with low work intensity, percent of total pop. (eu_lwoin_pc_y_lt60)

Long tag: qog_eureg_long_eu_lwoin_pc_y_lt60

Original tag: eu_lwoin_pc_y_lt60

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Population aged 0-59 living in households with very low work intensity by NUTS regions, as a percentage of total population aged less than 60. People living in households with very low work intensity are people aged 0-59 living in households where the adults work less than 20percent of their total work potential during the past year.

2.8.8.4 Severe material deprivation rate by NUTS regions, percentage (eu_matdep_pc)

Long tag: qog_eureg_long_eu_matdep_pc

Original tag: eu_matdep_pc

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population living in conditions of severe material deprivation by NUTS 2 regions. The collection *material deprivation* covers indicators relating to economic strain, durables, housing and environment of the dwelling. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 following deprivations items: they cannot afford i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, ix) a telephone.

2.8.8.5 People at risk of poverty or social exclusion by NUTS regions, percentage (eu_povr_pc)

Long tag: qog_eureg_long_eu_povr_pc

Original tag: eu_povr_pc

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

People at risk of poverty or social exclusion by NUTS 2 regions, percentage of total population. Persons who are at risk of poverty or severely materially deprived or living in households with very low work intensity. Persons are only counted once even if they are present in several sub-indicators. At risk-of-poverty are persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60 percent of the national median equivalised disposable income (after social transfers). Material deprivation covers indicators relating to economic strain and durables. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 following deprivations items: cannot afford i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, or ix) a telephone. People living in households with very low work intensity are those aged 0-59 living in households where the adults (aged 18-59) work less than 20percent of their total work potential during the past year.

2.8.9 Digital Society and Economy

This category includes variables related to internet use and the use of the internet for economic purposes, such as purchases or banking.

2.8.9.1 Last online purchase: between 3 and 12 months ago, percentage (eu_igs_b3_12)

Long tag: qog_eureg_long_eu_igs_b3_12

Original tag: eu_igs_b3_12

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of individuals whose last online purchase between 3 and 12 months ago. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. The population of individuals consists of all individuals aged 16 to 74 (on an optional basis some countries collect separate data on other age groups, individuals aged 15 years or less, aged 75 or more). Regional breakdowns have been provided on a voluntary basis for 2006 and 2007 according to NUTS1 or NUTS2 by several countries. Starting from 2008, the collection of NUTS1 breakdowns is obligatory (regional breakdowns for all countries are available) while NUTS2 breakdowns are still optional.

2.8.9.2 Online purchases: from sellers from other EU countries, percentage (eu_igs_bfeu)

Long tag: qog_eureg_long_eu_igs_bfeu

Original tag: eu_igs_bfeu

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of individuals who have made online purchases from sellers in other EU countries. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. The population of individuals consists of all individuals aged 16 to 74 (on an optional basis some countries collect separate data on other age groups, individuals aged 15 years or less, aged 75 or more). Regional breakdowns have been provided on a voluntary basis for 2006 and 2007 according to NUTS1 or NUTS2 by several countries. Starting from 2008, the collection of NUTS1 breakdowns is obligatory (regional breakdowns for all countries are available) while NUTS2 breakdowns are still optional.

2.8.9.3 Online purchases: travel and holiday accommodation, percentage (eu_igs_bhols)

Long tag: qog_eureg_long_eu_igs_bhols

Original tag: eu_igs_bhols

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of individuals who purchased travel and holiday accommodation online. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. The population of individuals consists of all individuals aged 16 to 74 (on an optional basis some countries collect separate data on other age groups, individuals aged 15 years or less, aged 75 or more).

Regional breakdowns have been provided on a voluntary basis for 2006 and 2007 according to NUTS1 or NUTS2 by several countries. Starting from 2008, the collection of NUTS1 breakdowns is obligatory (regional breakdowns for all countries are available) while NUTS2 breakdowns are still optional.

2.8.9.4 Last online purchase: in the 12 months, percentage (eu_igs_blt12)

Long tag: qog_eureg_long_eu_igs_blt12

Original tag: eu_igs_blt12

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of individuals who made an online purchase in the 12 months. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. 2.8.10 Labour Market Statistics

This category includes variables about employment and unemployment rates, in general, as well as in subgroups of the population.

2.8.10.1 Full-time employment, female, in thousands (eu_emp_ft_f)

Long tag: qog_eureg_long_eu_emp_ft_f

Original tag: eu_emp_ft_f

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Full-time female employment, in thousands. The source for the regional labour market information is the EU Labour Force Survey (EU-LFS). This is a quarterly household sample survey conducted in all Member States of the EU, the United Kingdom, EFTA and Candidate Countries (Montenegro, North Macedonia, Serbia and Turkey). The definitions of employment and unemployment, as well as other survey characteristics follow the definitions and recommendations of the International Labour Organisation (ILO). The definition of unemployment is further specified in Commission Regulation (EC) No 1897/2000.

2.8.10.2 Full-time employment, male, in thousands (eu_emp_ft_m)

Long tag: qog_eureg_long_eu_emp_ft_m

Original tag: eu_emp_ft_m

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total unemployment rate for 15-24 years old. Unemployed persons comprise persons who fulfil all the three following conditions: - are without work during the reference week; - are available to start work within the next two weeks; - have been actively seeking work in the past four weeks or have already found a job to start within the next three months. The source for the regional labour market information is the EU Labour Force Survey (EU-LFS). This is a quarterly household sample survey conducted in all Member States of the EU, the United Kingdom, EFTA and Candidate Countries (Montenegro, North Macedonia, Serbia and Turkey). The definitions of employment and unemployment, as well as other survey characteristics follow the definitions and recommendations of the International Labour Organisation (ILO).

2.8.10.39 Unemployment rate for 15-74 years old, female (eu_unemp_1574f)

2.8.11 Economy

This category provides information on household incomes and GDP.

2.8.11.1 Income of households (Balance) in euro per inhabitant (eu_b5n_eur_hab)

Long tag: qog_eureg_long_eu_b5n_eur_hab

Original tag: eu_b5n_eur_hab

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Income of households (balance), Euro per inhabitant. The disposable income of private households is the balance of primary income (operating surplus/mixed income plus compensation of employees plus property income received minus property income paid) and the redistribution of income in cash. These transactions comprise social contributions paid, social benefits in cash received, current taxes on income and wealth paid, as well as other current transfers. Disposable income does not include social transfers in kind coming from public administrations or non-profit institutions serving households.

2.8.11.2 Income of households (Balance) in million euro (eu_b5n_mio_eur)

Long tag: qog_eureg_long_eu_b5n_mio_eur

Original tag: eu_b5n_mio_eur

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.8.11.11 Regional gross domestic product by NUTS 2 regions, million EUR (eu_mio_eur)

Long tag: qog_eureg_long_eu_mio_eur

Original tag: eu_mio_eur

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Regional gross domestic product (GDP) by NUTS 2 regions in Million euro. GDP is an indicator of the output of a country or a region. It reflects the total value of all goods and services produced less the value of goods and services used for intermediate consumption in their production. Expressing GDP in PPS (purchasing power standards) eliminates differences in price levels between countries. Calculations on a per inhabitant basis allow for the comparison of economies and regions significantly different in absolute size. GDP per inhabitant in PPS is the key variable for determining the eligibility of NUTS 2 regions in the framework of the European Union's structural policy.

2.8.11.12 Regional gross domestic product (million PPS) by NUTS 2 regions (eu_gdp_mio_pps)

Long tag: qog_eureg_long_eu_gdp_mio_pps

Original tag: eu_gdp_mio_pps

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Long tag: qog_eureg_long_eu_gdp_pps_hab_eu27_2020

Original tag: eu_gdp_pps_hab_eu27_2020

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Regional gross domestic product (GDP) by NUTS 2 regions in PPS (purchasing power standards) per inhabitant, as percent of EU27 (from 2020) average. GDP is an indicator of the output of a country or a region. It reflects the total value of all goods and services produced less the value of goods and services used for intermediate consumption in their production. Expressing GDP in PPS eliminates differences in price levels between countries. Calculations on a per inhabitant basis allow for the comparison of economies and regions significantly different in absolute size. GDP per inhabitant in PPS is the key variable for determining the eligibility of NUTS 2 regions in the framework of the European Union's structural policy.

2.8.11.15 Disposable income of private households by NUTS 2 regions (eu_dinc_pps_hab)

Long tag: qog_eureg_long_eu_dinc_pps_hab

Original tag: eu_dinc_pps_hab

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Disposable income of private households by NUTS 2 regions in PPS (purchasing power standards) based on final consumption per inhabitant. The disposable income of private households is the balance of primary income (operating surplus/mixed income plus compensation of employees plus property income received minus property income paid) and the redistribution of income in cash. These transactions comprise social contributions paid, social benefits in cash received, current taxes on income and wealth paid, as well as other current transfers. Disposable income does not include social transfers in kind coming from public administrations or non-profit institutions serving households. The data for NUTS 1 and NUTS 0 regions has been calculated by computing a mean of the NUTS 2 values within each region.

2.8.11.16 Primary income of private households by NUTS 2 regions (eu_pinc_pps_hab)

Long tag: qog_eureg_long_eu_pinc_pps_hab

Original tag: eu_pinc_pps_hab

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Primary income of private households by NUTS 2 regions in PPS (purchasing power standards) based on final consumption per inhabitant. 2.8.11.17 Real growth rate of regional gross value added (GVA) at basic prices (eu_rgva_pch_pre)

Long tag: qog_eureg_long_eu_rgva_pch_pre

Original tag: eu_rgva_pch_pre

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Real growth rate of regional gross value added (GVA) at basic prices by NUTS 2 regions, percentage change on previous year. GVA is an indicator of the economic activity of a country or a region. It reflects the total value of all goods and services produced less the value of goods and services used for intermediate consumption in their production. Several years ago Eurostat has started to collect real growth rates of regional GVA at NUTS level 2 from those Member States which calculate this already. The indicator is part of the ESA 2010 data transmission programme, but the transmission will be obligatory only as from the end of 2017.

2.8.12 Tourism

This category includes information about available hotel beds as well as the number of days spent in tourist accommodation.

2.8.12.1 Number of bed-places in hotels, camping places and other (eu_tour_nstour_bedpl)

Long tag: qog_eureg_long_eu_tour_nstour_bedpl

Original tag: eu_tour_nstour_bedpl

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of bed-places in hotels, camping places and other. The number of bed-places in an establishment or dwelling is determined by the number of persons who can stay overnight in the beds set up in the establishment (dwelling), ignoring any extra beds that may be set up by customer request. The term bed place applies to a single bed, double beds are counted as two bed-places. The unit serves to measure the capacity of any type of accommodation. A bed place is also a place on a pitch or in a boat on a mooring to accommodate one person. One camping pitch should equal four bed-places if the actual number of bed-places is not known.

2.8.12.2 Number of establishments in hotels, camping places and other (eu_tour_nstour_estbl)

Long tag: qog_eureg_long_eu_tour_nstour_estbl

Original tag: eu_tour_nstour_estbl

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of establishments in hotels, camping places and other. A tourist accommodation establishment is defined as any facility that regularly or occasionally provides short-term accommodation for tourists as a paid service (although the price might be partially or fully subsidised). Data is reported at the level of a local kind-of-activity unit. The local unit is an enterprise or part thereof situated in a geographically identified place. At or from this place economic activity is carried out for which - save for certain exceptions - one or more persons work (even if only part-time) for one and the same enterprise. The accommodation establishment conforms to the definition of local unit as the production unit. This is irrespective of whether the accommodation of tourists is the main or secondary activity. This means that all establishments are classified in the accommodation sector if their capacity exceeds the national minimum even if the major part of turnover may come from restaurant or other services.

2.8.12.3 Net occupancy rate of bed-places in hotels and similar (eu_tour_bedpl)

Long tag: qog_eureg_long_eu_tour_bedpl

Original tag: eu_tour_bedpl

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Net occupancy rate of bed-places in hotels and similar. The occupancy rate of bed-places in reference period is obtained by dividing the total number of overnight stays by the number of the bed-places on offer (excluding extra beds) and the number of days when the bed-places are actually available for use (net of seasonal closures and other temporary closures for decoration, by police order, etc.). The result is multiplied by 100 to express the occupancy rate as a percentage. From reference period 2012 onwards, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Regulation (EU) 692/2011 of the European Parliament and of the Council. Up to reference period 2011, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Council Directive on tourism statistics 95/57/EC .

2.8.12.4 Net occupancy rate of bedrooms in hotels and similar (eu_tour_bedrm)

Long tag: qog_eureg_long_eu_tour_bedrm

Original tag: eu_tour_bedrm

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Net occupancy rate of bedrooms in hotels and similar. The net occupancy rate of bedrooms in reference period is obtained by dividing the total number of bedrooms used during the reference period (i.e. the sum of the bedrooms in use per day) by the total number of bedrooms available for the reference period (i.e. the sum of bedrooms available per day). The result is multiplied by 100 to express the occupancy rate as a percentage. From reference period 2012 onwards, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Regulation (EU) 692/2011 of the European Parliament and of the Council. Up to reference period 2011, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Council Directive on tourism statistics 95/57/EC .

2.8.12.5 Number of nights spent at camping grounds, recreational vehicle and trailer park (eu_tour_nscamp)

Long tag: qog_eureg_long_eu_tour_nscamp

Original tag: eu_tour_nscamp

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of nights spent at camping grounds, recreational vehicle parks and trailer parks. A night spent (or overnight stay) is each night a guest / tourist (resident or non-resident) actually spends (sleeps or stays) in a tourist accommodation establishment or non-rented accommodation. Normally the date of arrival is different from the date of departure but persons arriving after midnight and leaving on the same day are included in overnight stays. A person should not be registered in two or more accommodation establishments at the same time. From reference period 2012 onwards, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Regulation (EU) 692/2011 of the European Parliament and of the Council. Up to reference period 2011, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Council Directive on tourism statistics 95/57/EC .

2.8.12.6 Number of nights spent at hotels and similar accommodation (eu_tour_nshotel)

Long tag: qog_eureg_long_eu_tour_nshotel

Original tag: eu_tour_nshotel

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.8.13 Transport

This category provides information on the means of transportation used as well as available vehicles and the road infrastructure.

2.8.13.1 Injured victims in road accidents, per million inhabitants (eu_rac_inj)

Long tag: qog_eureg_long_eu_rac_inj

Original tag: eu_rac_inj

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Injured victims in road accidents, per million inhabitants. It includes any person who as result of an injury accident was not killed immediately or not dying within 30 days, but sustained an injury, normally needing medical treatment, excluding attempted suicides. Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured. An injured person is excluded if the competent authority declares the cause of the injury to be attempted suicide by that person, i.e. a deliberate act to injure oneself resulting in injury, but not in death.

2.8.13.2 Killed victims in road accidents, per million inhabitants (eu_rac_kil)

Long tag: qog_eureg_long_eu_rac_kil

Original tag: eu_rac_kil

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Killed victims in road accidents, per million inhabitants. It includes any person killed immediately or dying within 30 days as a result of an injury accident, excluding suicides. A killed person is excluded if the competent authority declares the cause of death to be suicide, i.e. a deliberate act to injure oneself resulting in death. For countries that do not apply the

threshold of 30 days, conversion coefficients are estimated so that comparisons on the basis of the 30 day-definition can be made.

2.8.13.3 Air transport of freight and mail loaded, in thousand tonnes (eu_atf_frm_ld)

Long tag: qog_eureg_long_eu_atf_frm_ld

Original tag: eu_atf_frm_ld

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Air transport of freight and mail loaded in thousand tonnes. The air transport regional data have been calculated using data collected at the airport level in the frame of Commission Regulation (EC) No 1358/2003. They are aggregated at regional level (NUTS 1 and NUTS 2) and also at national level (NUTS0), excluding double counting within each region.

2.8.13.22 Total number of motor coaches, buses and trolley buses (eu_vs_bus_tot)

Long tag: qog_eureg_long_eu_vs_bus_tot

Original tag: eu_vs_bus_tot

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of motor coaches, buses and trolley buses. Motor coach is passenger road motor vehicle designed to seat 24 or more persons (including the driver) and constructed exclusively for the carriage of seated passengers. Bus is defined as passenger road motor vehicle designed to carry more than 24 persons (including the driver), and with provision to carry seated as well as standing passengers. Trolleybus is passenger road vehicle designed to seat more than nine persons (including the driver), which is connected to electric conductors and which is not rail-borne. This term covers vehicles which may be used either as trolleybuses or as buses, if they have a motor independent of the main electric power supply.

2.8.13.23 Total number of motor coaches, buses and trolley buses (eu_vs_car)

Long tag: qog_eureg_long_eu_vs_car

Original tag: eu_vs_car

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of passenger cars. Passenger car is a road motor vehicle, other than a moped or a motor cycle, intended for the carriage of passengers and designed to seat no more than nine persons (including the driver). Included are: passenger cars, vans designed and used primarily for transport of passengers, taxis, hire cars, ambulances, motor homes. Excluded are light goods road vehicles, as well as motor-coaches and buses, and mini-buses/mini-coaches. "Passenger car" includes micro cars (needing no permit to be driven), taxis and passenger hire cars, provided that they have fewer than ten seats.

2.8.13.24 Total number of passenger cars (eu_vs_lor)*Long tag:* qog_eureg_long_eu_vs_lor*Original tag:* eu_vs_lor*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Total number of lorries. Lorry / truck is rigid road motor vehicle designed, exclusively or primarily, to carry goods.

2.8.13.25 Total number of lorries (eu_vs_moto)*Long tag:* qog_eureg_long_eu_vs_moto*Original tag:* eu_vs_moto*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Total number of motorcycles. Motorcycle is defined as two-, three- or four-wheeled road motor vehicle not exceeding 400 kg (900 lb) of unladen weight. All such vehicles with a cylinder capacity of 50 cc or over are included, as are those under 50 cc which do not meet the definition of moped.

2.8.13.26 Total number of motorcycles (eu_vs_spe)*Long tag:* qog_eureg_long_eu_vs_spe*Original tag:* eu_vs_spe*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Total number of special vehicles. Special purpose road motor vehicle is road motor vehicle designed for purposes other than the carriage of passengers or goods. This category includes: fire brigade vehicles, mobile cranes, self-propelled rollers, bulldozers with metallic wheels or track, vehicles for recording film, radio and TV broadcasting, mobile library vehicles, towing vehicles for vehicles in need of repair, other special purpose road motor vehicles.

2.8.13.27 Total number of special vehicles (eu_vs_tot_x_tm)*Long tag:* qog_eureg_long_eu_vs_tot_x_tm*Original tag:* eu_vs_tot_x_tm*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Total number of all vehicles except trailers and motorcycles.

2.8.13.28 Total number of all vehicles (except trailers and motorcycles) (eu_vs_trc)*Long tag:* qog_eureg_long_eu_vs_trc*Original tag:* eu_vs_trc*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Total number of road tractors. Road tractor is road motor vehicle designed, exclusively or

primarily, to haul other road vehicles which are not power-driven (mainly semi-trailers). Agricultural tractors are excluded.

2.8.13.29 Total number of road tractors (eu_vs_trl_strl)

Long tag: qog_eureg_long_eu_vs_trl_strl

Original tag: eu_vs_trl_strl

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of trailers and semi-trailers. Trailer is goods road vehicle designed to be hauled by a road motor vehicle. This category excludes agricultural trailers and caravans. Semi-trailer describes goods road vehicle with no front axle designed in such way that part of the vehicle and a substantial part of its loaded weight rests on a road tractor.

2.8.13.30 Total number of trailers and semi-trailers (eu_vs_utl)

Long tag: qog_eureg_long_eu_vs_utl

Original tag: eu_vs_utl

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of total utility vehicles.

2.9 QoG EU Regional Dataset Wide Data (NUTS 1)

Dataset tag: qog_eureg_wide1

Output Unit: QoG NUTS Region-Year, i.e., data is collected per European NUTS region and year. This means that every row in the dataset can be identified through a combination of region and year. The unit can be expressed using the columns `region_code` and `year`. The unit can also be expressed through a combination of the columns `nuts0`, `nuts1` and `year`.

Description: The QoG EU Regional dataset is a dataset consisting of more than 300 variables covering three levels of European regions - Nomenclature of Territorial Units for Statistics (NUTS): NUTS0 (country), NUTS1 (major socio-economic regions) and NUTS2 (basic regions for the application of regional policies).

The QoG Regional Data is presented in three different forms available in separate datasets. The variables are the same across all three datasets besides a varying suffix (`_nuts0`, `_nuts1`, `_nuts2`) indicating which NUTS level is represented.

All datasets are available in time-series format. The first one (The QoG Regional Data - Long Form) is a dataset where data is presented in the long form. The list of units of analysis contains regions of all NUTS levels.

Two other datasets are presented in the wide form for multilevel analysis. In the second dataset (The QoG Regional Data - Wide Form NUTS1) includes NUTS1 level as the unit of analysis and variables represent the values for this level and corresponding lower level – NUTS0. As an example, in this dataset the data is presented only for East Sweden (Ostra Sverige SE1), as a unit of analysis and has values for lower levels of this region - Sweden (SE).

In the third dataset (The QoG Regional Data - Wide Form NUTS2) the unit of analysis is NUTS2 level regions and variables provide values as for every unit of analysis, as well as for corresponding lower NUTS levels: NUTS1 and NUTS0. One example of unit of analysis in this dataset is Stockholm (SE11) and data for every variable will be for Stockholm, as well as for lower level regions - East Sweden (Ostra Sverige SE1) and Sweden (SE).

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust their license without previous warning.

More detailed information on the dataset can be found at the following web page: <https://www.gu.se/en/quality-government/qog-data/data-downloads/eu-regional-dataset>

2.9.1 Identification

Identification variables in the dataset.

2.9.1.1 NUTS code of region (region_code)

Long tag: qog_eureg_wide1_region_code

Original tag: region_code

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

NUTS code of region. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

2.9.1.2 Name of the region (region_name)

Long tag: qog_eureg_wide1_region_name

Original tag: region_name

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Name of the region in the language of the country.

2.9.1.3 Year (year)

Long tag: qog_eureg_wide1_year

Original tag: year

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Year of observation

2.9.1.4 Code of NUTS0 level region (nuts0)

Long tag: qog_eureg_wide1_nuts0

Original tag: nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Code of NUTS0 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 0: country level.

2.9.1.5 Code of NUTS1 level region (nuts1)

Long tag: qog_eureg_wide1_nuts1

Original tag: nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Code of NUTS1 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 1: major socio-economic regions.

2.9.1.6 The Nomenclature of Territorial Units for Statistics (NUTS) level (nuts_level)

Long tag: qog_eureg_wide1_nuts_level

Original tag: nuts_level

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

To what level of NUTS belong observation. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

(0) Country level

(1) Major socio-economic regions

(2) Basic regions for the application of regional policies

2.9.2 Quality of Government

This category includes variables that are the core features of QoG (impartiality, bureaucratic quality and corruption) as well as measures that are broader (rule of law and transparency).

2.9.2.1 Number of awarded contracts above 130,000 EUR (cri_contr_nuts0)

Long tag: qog_eureg_wide1_cri_contr_nuts0

Original tag: cri_contr_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

2.9.2.2 Number of awarded contracts above 130,000 EUR (cri_contr_nuts1)

Long tag: qog_eureg_wide1_cri_contr_nuts1

Original tag: cri_contr_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

2.9.2.3 Final value of awarded tenders of over 130,000 EUR (cri_cvalue_nuts0)

Long tag: qog_eureg_wide1_cri_cvalue_nuts0

Original tag: cri_cvalue_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Sum of the final value of successfully awarded tenders published on TED above 130k EUR threshold.

2.9.2.4 Final value of awarded tenders of over 130,000 EUR (cri_cvalue_nuts1)

Long tag: qog_eureg_wide1_cri_cvalue_nuts1

Original tag: cri_cvalue_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Sum of the final value of successfully awarded tenders published on TED above 130k EUR threshold.

2.9.2.5 Share of contracts with only one bid in total (cri_singleb_nuts0)

Long tag: qog_eureg_wide1_cri_singleb_nuts0

Original tag: cri_singleb_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with only one bid in total.

2.9.2.6 Share of contracts with only one bid in total (cri_singleb_nuts1)

Long tag: qog_eureg_wide1_cri_singleb_nuts1

Original tag: cri_singleb_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with only one bid in total.

2.9.2.7 Share of contracts with no published call for tender red flag (cri_nocall_nuts0)

Long tag: qog_eureg_wide1_cri_nocall_nuts0

Original tag: cri_nocall_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'no published call for tender' red flag. A contract is considered to have 'no call for tender' red flag if two conditions are met: i) The sum of prior information notices and contract notices equals 0 and ii) The country of a buyer is not on the list of countries in which 'no call for tender publication' is not a risk factor. These countries are BG, DK, EE, ES, and LT.

2.9.2.8 Share of contracts with no published call for tender red flag (cri_nocall_nuts1)

Long tag: qog_eureg_wide1_cri_nocall_nuts1

Original tag: cri_nocall_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'no published call for tender' red flag. A contract is considered to have 'no call for tender' red flag if two conditions are met: i) The sum of prior information notices and contract notices equals 0 and ii) The country of a buyer is not on the list of countries in which 'no call for tender publication' is not a risk factor. These countries are BG, DK, EE, ES, and LT.

2.9.2.9 Share of contracts with non-open procedure red flag (cri_nonopen_nuts0)

Long tag: qog_eureg_wide1_cri_nonopen_nuts0

Original tag: cri_nonopen_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'non-open procedure' red flag. Whether a procedure is considered non-open depends on procedure type as well as specific country regulation. Please refer to the 'Non-open procedure details' sheet to search for country-procedure combinations.

2.9.2.10 Share of contracts with non-open procedure red flag (cri_nonopen_nuts1)

Long tag: qog_eureg_wide1_cri_nonopen_nuts1

Original tag: cri_nonopen_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'non-open procedure' red flag. Whether a procedure is considered non-open depends on procedure type as well as specific country regulation. Please refer to the 'Non-open procedure details' sheet to search for country-procedure combinations.

2.9.2.11 Share of contracts with tax haven red flag (cri_taxhav_nuts0)

Long tag: qog_eureg_wide1_cri_taxhav_nuts0

Original tag: cri_taxhav_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'tax haven' red flag. A contract has a 'tax haven' red flag in case

two conditions are met: i) buyer and supplier are from different countries and ii) according to Financial Secrecy Index (<https://www.financialsecrecyindex.com/en/>) supplier country was classified as a tax haven.

2.9.2.12 Share of contracts with tax haven red flag (cri_taxhav_nuts1)

Long tag: qog_eureg_wide1_cri_taxhav_nuts1

Original tag: cri_taxhav_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'tax haven' red flag. A contract has a 'tax haven' red flag in case two conditions are met: i) buyer and supplier are from different countries and ii) according to Financial Secrecy Index (<https://www.financialsecrecyindex.com/en/>) supplier country was classified as a tax haven.

2.9.2.13 EQI Index Score (eqi_score_nuts0)

Long tag: qog_eureg_wide1_eqi_score_nuts0

Original tag: eqi_score_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final score of European Quality Index (centered around WGI), all units. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.9.2.14 EQI Index Score (eqi_score_nuts1)

Long tag: qog_eureg_wide1_eqi_score_nuts1

Original tag: eqi_score_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final score of European Quality Index (centered around WGI), all units. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.9.2.15 Quality pillar, country centered and z-score standardized (eqi_zquality_nuts0)

Long tag: qog_eureg_wide1_eqi_zquality_nuts0

Original tag: eqi_zquality_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI quality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.9.2.16 Quality pillar, country centered and z-score standardized (eqi_zquality_nuts1)

Long tag: qog_eureg_wide1_eqi_zquality_nuts1

Original tag: eqi_zquality_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI quality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.9.2.17 Impartiality pillar, country centered and z-score standardized (eqi_zimpartiality_nuts0)

Long tag: qog_eureg_wide1_eqi_zimpartiality_nuts0

Original tag: eqi_zimpartiality_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI impartiality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.9.2.18 Impartiality pillar, country centered and z-score standardized (eqi_zimpartiality_nuts1)

Long tag: qog_eureg_wide1_eqi_zimpartiality_nuts1

Original tag: eqi_zimpartiality_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI impartiality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.9.2.19 Corruption pillar, country centered and z-score standardized (eqi_zcorruption_nuts0)

Long tag: qog_eureg_wide1_eqi_zcorruption_nuts0

Original tag: eqi_zcorruption_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption pillar, country centered and z-score standardized. For its calculation, they

aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.9.2.20 Corruption pillar, country centered and z-score standardized (eqi_zcorruption_nuts1)

Long tag: qog_eureg_wide1_eqi_zcorruption_nuts1

Original tag: eqi_zcorruption_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.9.2.21 Corruption perceptions index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptper_nuts1)

Long tag: qog_eureg_wide1_eqi_zcorruptper_nuts1

Original tag: eqi_zcorruptper_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption perceptions index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.9.2.22 Corruption experiences index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptexp_nuts1)

Long tag: qog_eureg_wide1_eqi_zcorruptexp_nuts1

Original tag: eqi_zcorruptexp_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption experiences index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.9.2.23 EQI index, min-max (0-100) standardized (eqi_norm_eqi_nuts0)

Long tag: qog_eureg_wide1_eqi_norm_eqi_nuts0

Original tag: eqi_norm_eqi_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI index, min-max (0-100) standardized. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.9.2.24 EQI index, min-max (0-100) standardized (eqi_norm_eqi_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_eqi_nuts1

Original tag: eqi_norm_eqi_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI index, min-max (0-100) standardized. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.9.2.25 Quality pillar, country centered and min-max (0-100) standardized (eqi_norm_qual_nuts0)

Long tag: qog_eureg_wide1_eqi_norm_qual_nuts0

Original tag: eqi_norm_qual_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and min-max (0-100) standardized.

2.9.2.26 Quality pillar, country centered and min-max (0-100) standardized (eqi_norm_qual_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_qual_nuts1

Original tag: eqi_norm_qual_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and min-max (0-100) standardized.

2.9.2.27 Impartiality pillar, country centered and min-max (0-100) standardized (eqi_norm_impact_nuts0)

Long tag: qog_eureg_wide1_eqi_norm_impact_nuts0

Original tag: eqi_norm_impact_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and min-max (0-100) standardized.

2.9.2.28 Impartiality pillar, country centered and min-max (0-100) standardized (eqi_norm_impact_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_impact_nuts1

Original tag: eqi_norm_impact_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and min-max (0-100) standardized.

2.9.2.29 Corruption pillar, country centered and min-max (0-100) standardized (eqi_norm_corrupt_nuts0)

Long tag: qog_eureg_wide1_eqi_norm_corrupt_nuts0

Original tag: eqi_norm_corrupt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and min-max (0-100) standardized.

2.9.2.30 Corruption pillar, country centered and min-max (0-100) standardized (eqi_norm_corrupt_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_corrupt_nuts1

Original tag: eqi_norm_corrupt_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and min-max (0-100) standardized.

2.9.2.31 Corruption perceptions index (corruption sub-pillar) min-max (0-100)(2017) (eqi_norm_corruptper_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_corruptper_nuts1

Original tag: eqi_norm_corruptper_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption perceptions index (corruption sub-pillar), min-max (0-100) standardized.

2.9.2.32 Corruption experiences index (corruption sub-pillar) min-max (0-100) (2017) (eqi_norm_corruptexp_nuts1)

Long tag: qog_eureg_wide1_eqi_norm_corruptexp_nuts1

Original tag: eqi_norm_corruptexp_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption experiences index (corruption sub-pillar) min-max (0-100) standardized.

2.9.3 Demographics

This category includes variables describing the demographic characteristics of a population, such as its size, life-expectancy, fertility rates and death rates.

2.9.3.1 Reported number of cases of burglary of private premises (eu_cri_bur_nuts0)

Long tag: qog_eureg_wide1_eu_cri_bur_nuts0

Original tag: eu_cri_bur_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of burglary of private premises. Domestic burglary is defined as gaining access to a dwelling by the use of force to steal goods.

2.9.3.2 Reported number of cases of burglary of private premises (eu_cri_bur_nuts1)

Long tag: qog_eureg_wide1_eu_cri_bur_nuts1

Original tag: eu_cri_bur_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of burglary of private premises. Domestic burglary is defined as gaining access to a dwelling by the use of force to steal goods.

2.9.3.3 Reported number of cases of intentional homicide (eu_cri_inthom_nuts0)

Long tag: qog_eureg_wide1_eu_cri_inthom_nuts0

Original tag: eu_cri_inthom_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of intentional homicide. It is defined as intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. Causing death by dangerous driving is excluded, as are abortion and help with suicide. Attempted (uncompleted) homicide is also excluded. The counting unit for homicide is normally the victim (rather than the case).

2.9.3.4 Reported number of cases of intentional homicide (eu_cri_inthom_nuts1)

Long tag: qog_eureg_wide1_eu_cri_inthom_nuts1

Original tag: eu_cri_inthom_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of intentional homicide. It is defined as intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. Causing death by dangerous driving is excluded, as are abortion and help with suicide. Attempted (uncompleted) homicide is also excluded. The counting unit for homicide is normally the victim (rather than the case).

2.9.3.5 Reported number of cases of robbery (eu_cri_rob_nuts0)

Long tag: qog_eureg_wide1_eu_cri_rob_nuts0

Original tag: eu_cri_rob_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of robbery. Robbery is a sub-set of violent crime (see above). It

is defined as stealing from a person with force or threat of force, including muggings (bag-snatching) and theft with violence. Pick-pocketing, extortion and blackmailing are generally not included.

2.9.3.6 Reported number of cases of robbery (eu_cri_rob_nuts1)

Long tag: qog_eureg_wide1_eu_cri_rob_nuts1

Original tag: eu_cri_rob_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of robbery. Robbery is a sub-set of violent crime (see above). It is defined as stealing from a person with force or threat of force, including muggings (bag-snatching) and theft with violence. Pick-pocketing, extortion and blackmailing are generally not included.

2.9.3.7 Proportion of live births outside marriage (eu_agemoth_nuts0)

Long tag: qog_eureg_wide1_eu_agemoth_nuts0

Original tag: eu_agemoth_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Proportion of live births outside marriage. A live birth outside marriage is defined as a live birth where the mother's marital status at the time of birth is other than married.

2.9.3.8 Total fertility rate (eu_agemoth1_nuts0)

Long tag: qog_eureg_wide1_eu_agemoth1_nuts0

Original tag: eu_agemoth1_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total fertility rate. It is defined as the mean number of children who would be born to a woman during her lifetime, if she were to spend her childbearing years conforming to the age-specific fertility rates, that have been measured in a given year.

2.9.3.9 Mean age of women at childbirth (eu_nmarpct_nuts0)

Long tag: qog_eureg_wide1_eu_nmarpct_nuts0

Original tag: eu_nmarpct_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at childbirth. It is calculated as the mean age of women when their children are born.

2.9.3.10 Mean age of women at birth of first child (eu_totferrt_nuts0)

Long tag: qog_eureg_wide1_eu_totferrt_nuts0

Original tag: eu_totferrt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at birth of first child. It is calculated as the mean age of women when their first children are born.

2.9.3.11 Number of deaths of females, all ages (eu_death_totalf_nuts0)

Long tag: qog_eureg_wide1_eu_death_totalf_nuts0

Original tag: eu_death_totalf_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.12 Number of deaths of males, all ages (eu_death_totalm_nuts0)

Long tag: qog_eureg_wide1_eu_death_totalm_nuts0

Original tag: eu_death_totalm_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.13 Number of deaths, total all ages (eu_death_totalt_nuts0)

Long tag: qog_eureg_wide1_eu_death_totalt_nuts0

Original tag: eu_death_totalt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.14 Number of deaths of females, at 1 year old (eu_death_y1f_nuts0)

Long tag: qog_eureg_wide1_eu_death_y1f_nuts0

Original tag: eu_death_y1f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.15 Number of deaths of males, at 1 year old (eu_death_y1m_nuts0)

Long tag: qog_eureg_wide1_eu_death_y1m_nuts0

Original tag: eu_death_y1m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.16 Number of deaths, total at 1 year old (eu_death_y1t_nuts0)

Long tag: qog_eureg_wide1_eu_death_y1t_nuts0

Original tag: eu_death_y1t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.17 Number of deaths of females, at 20 years old (eu_death_y20f_nuts0)

Long tag: qog_eureg_wide1_eu_death_y20f_nuts0

Original tag: eu_death_y20f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.18 Number of deaths of males, at 20 years old (eu_death_y20m_nuts0)

Long tag: qog_eureg_wide1_eu_death_y20m_nuts0

Original tag: eu_death_y20m_nuts0

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.19 Number of deaths, total at 20 years old (eu_death_y20t_nuts0)

Long tag: qog_eureg_wide1_eu_death_y20t_nuts0

Original tag: eu_death_y20t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.20 Number of deaths of females, at 50 years old (eu_death_y50f_nuts0)*Long tag:* qog_eureg_wide1_eu_death_y50f_nuts0*Original tag:* eu_death_y50f_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of females, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.21 Number of deaths of males, at 50 years old (eu_death_y50m_nuts0)*Long tag:* qog_eureg_wide1_eu_death_y50m_nuts0*Original tag:* eu_death_y50m_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of males, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.22 Number of deaths, total at 50 years old (eu_death_y50t_nuts0)*Long tag:* qog_eureg_wide1_eu_death_y50t_nuts0*Original tag:* eu_death_y50t_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths, total at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.23 Number of deaths of females, at 70 years old (eu_death_y70f_nuts0)*Long tag:* qog_eureg_wide1_eu_death_y70f_nuts0*Original tag:* eu_death_y70f_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of females, at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.24 Number of deaths of males, at 70 years old (eu_death_y70m_nuts0)*Long tag:* qog_eureg_wide1_eu_death_y70m_nuts0*Original tag:* eu_death_y70m_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of males, at 70 years old. Death means the permanent disappearance of all

evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.25 Number of deaths, total at 70 years old (eu_death_y70t_nuts0)

Long tag: qog_eureg_wide1_eu_death_y70t_nuts0

Original tag: eu_death_y70t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.9.3.26 Population at 1st January, Female (eu_d2jan_f_nuts0)

Long tag: qog_eureg_wide1_eu_d2jan_f_nuts0

Original tag: eu_d2jan_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female population as of 1st January of the year indicated. It is based on concept of usual resident population, i.e. the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population figures can be based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers. Usually resident population means all persons having usual residence in a country at the reference time. Usual residence means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The following persons alone are considered to be usual residents of the geographical area in question: a) those who have lived in their place of usual residence for a continuous period of at least 12 months before the reference time; or b) those who arrived in their place of usual residence during the 12 months before the reference time with the intention of staying there for at least one year.

2.9.3.27 Population at 1st January, Female (eu_d2jan_f_nuts1)

Long tag: qog_eureg_wide1_eu_d2jan_f_nuts1

Original tag: eu_d2jan_f_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, male. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.9.3.49 Life expectancy in years at 1 year old, male (eu_mlifexp_m_nuts1)

Long tag: qog_eureg_wide1_eu_mlifexp_m_nuts1

Original tag: eu_mlifexp_m_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, male. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.9.3.50 Life expectancy in years at 1 year old, total (eu_mlifexp_t_nuts0)

Long tag: qog_eureg_wide1_eu_mlifexp_t_nuts0

Original tag: eu_mlifexp_t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, total. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.9.3.51 Life expectancy in years at 1 year old, total (eu_mlifexp_t_nuts1)

Long tag: qog_eureg_wide1_eu_mlifexp_t_nuts1

Original tag: eu_mlifexp_t_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, total. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.9.3.52 Crude rate of net migration plus statistical adjustment (eu_cnmigratrtr_nuts1)

Long tag: qog_eureg_wide1_eu_cnmigratrtr_nuts1

Original tag: eu_cnmigratrtr_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of net migration plus statistical adjustment. Net migration including statistical adjustments the ratio of the net migration including statistical adjustment during the year to the average population in that year. The value is expressed per 1000 inhabitants. The crude rate of net migration is equal to the difference between the crude rate of population change and the crude rate of natural change (that is, net migration is considered as the part of population change not attributable to births and deaths). It is calculated in this way because immigration or emigration flows are either not available or the figures are not reliable.

2.9.3.53 Crude rate of total population change (eu_growrt_nuts1)

Long tag: qog_eureg_wide1_eu_growrt_nuts1

Original tag: eu_growrt_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of total population change. It is the ratio of the total population change during the year to the average population of the area in question in that year. The value is expressed per 1000 inhabitants.

2.9.3.54 Crude rate of natural change of population (eu_natgrowrt_nuts1)

Long tag: qog_eureg_wide1_eu_natgrowrt_nuts1

Original tag: eu_natgrowrt_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of natural change. It is the ratio of natural change over a period to the average population of the area in question during that period. The value is expressed per 1000 inhabitants.

2.9.4 Education

This category includes a variety of indicators related to education, such as educational attainment, the students (age, gender, educational level), and educational outcomes.

2.9.4.1 Educational attainment for ages 25 to 64, primary education, Female (eu_edatt_ed02_y2564f_nuts0)

Long tag: qog_eureg_wide1_eu_edatt_ed02_y2564f_nuts0

Original tag: eu_edatt_ed02_y2564f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This

aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.9.4.2 Educational attainment for ages 25 to 64, primary education, Female (eu_edatt_ed02_y2564f_nuts1)

Long tag: qog_eureg_wide1_eu_edatt_ed02_y2564f_nuts1

Original tag: eu_edatt_ed02_y2564f_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.9.4.3 Educational attainment for ages 25 to 64, primary education, Male (eu_edatt_ed02_y2564m_nuts0)

Long tag: qog_eureg_wide1_eu_edatt_ed02_y2564m_nuts0

Original tag: eu_edatt_ed02_y2564m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old males whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.9.4.4 Educational attainment for ages 25 to 64, primary education, Male (eu_edatt_ed02_y2564m_nuts1)

Long tag: qog_eureg_wide1_eu_edatt_ed02_y2564m_nuts1

2.9.4.26 Educational attainment for ages 30 to 34, secondary education, Female (eu_edatt_ed34_y3034f_nuts1)

Long tag: qog_eureg_wide1_eu_edatt_ed34_y3034f_nuts1

Original tag: eu_edatt_ed34_y3034f_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 30-34 years old females whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). This aggregate corresponds to ISCED 2011 levels 3 and 4 (online code ED3_4). ISCED 2011 level 3 programmes of partial level completion are considered within ISCED level 3. Data up to 2013 refer to ISCED 1997 levels 3C long, 3A, 3B and 4.

2.9.4.27 Educational attainment for ages 30 to 34, secondary education, Male (eu_edatt_ed34_y3034m_nuts0)

2.9.4.37 Early leavers from education and training as a percentage, Female (eu_eduleave_f_nuts0)

Long tag: qog_eureg_wide1_eu_eduleave_f_nuts0

Original tag: eu_eduleave_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female early leavers from education and training as a percentage of the population aged 18-24 with at most lower secondary education and not in further education or training. The indicator is defined as the percentage of the population aged 18-24 with at most lower secondary education and who were not in further education or training during the last four weeks preceding the survey. Lower secondary education refers to ISCED (International Standard Classification of Education) 2011 level 0-2 for data from 2014 onwards and to ISCED 1997 level 0-3C short for data up to 2013. The indicator is based on the EU Labour Force Survey.

2.9.4.38 Early leavers from education and training as a percentage, Female (eu_eduleave_f_nuts1)

2.9.4.43 15-24 year old neither in employment nor in education as percentage, female (eu_neet_y1524f_nuts0)

Long tag: qog_eureg_wide1_eu_neet_y1524f_nuts0

Original tag: eu_neet_y1524f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

15-24 year old females neither in employment nor in education as percentage. The indicator on young people neither in employment nor in education and training (NEET) provides information on young people aged 15 to 24 who meet the following two conditions: (a) they are not employed (i.e. unemployed or inactive according to the International Labour Organisation definition) and (b) they have not received any education or training in the four weeks preceding the survey. Data are expressed as a percentage of the total population in the same age group and sex, excluding the respondents who have not answered the question 'participation to education and training'. Data come from the European Union Labour Force Survey.

Employment rate for people between 15 and 34 years, whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.9.4.57 Employment rate for people between 15-34 years, education levels 3-4 (eu_empl_edled34_nuts0)

Long tag: qog_eureg_wide1_eu_empl_edled34_nuts0

Original tag: eu_empl_edled34_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Employment rate for people between 15 and 34 years, whose the highest level of education successfully completed is upper secondary and post-secondary non-tertiary education (levels 3 and 4). The indicator is defined as the percentage of the population aged 15-34, who were employed (ILO definition), not in further education or training (i.e. neither formal nor non-formal) during the last four weeks preceding the survey.

2.9.4.58 Employment rate for people between 15-34 years, education levels 3-4 (eu_empl_edled34_nuts1)

Long tag: qog_eureg_wide1_eu_empl_edled34_nuts1

Original tag: eu_empl_edled34_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.4.67 Participation rate in education and training (last 4 weeks), females (eu_epry2564f_nuts0)

Long tag: qog_eureg_wide1_eu_epry2564f_nuts0

Original tag: eu_epry2564f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female participation rate in education and training during the last four weeks preceding the survey. The participation rate in education and training covers participation in formal and non-formal education and training. The reference period for the participation in education and training is the four weeks prior to the interview. Formal education is defined by ISCED as 'education that is institutionalised, intentional and planned through public organisations and recognised private bodies, and – in their totality – constitute the formal education

system of a country. Formal education programmes are thus recognised as such by the relevant national education or equivalent authorities, e.g. any other institution in cooperation with the national or sub-national education authorities.’ Non-formal education and training is defined as any institutionalised, intentional and organised/planned learning activities outside the formal education system. According to the classification of learning activities (CLA 2016), non-formal education and training comprises courses, seminars and workshops, private lessons or instructions and guided-on-the-job training. However, non-formal education as measured in the EU-LFS excludes guided-on-the-job training. The information collected covers both job-related (professional) and non-job related (personal, social, ‘leisure’) education and training activities.

2.9.4.68 Participation rate in education and training (last 4 weeks), females (eu_epry2564f_nuts1)

Long tag: qog_eureg_wide1_eu_epry2564f_nuts1

Original tag: eu_epry2564f_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.5 Environment

This category includes indicators related to temperature and municipal waste.

2.9.5.1 Municipal waste disposal - incineration in thousand tonnes (eu_env_wasdsp_i_nuts0)

Long tag: qog_eureg_wide1_eu_env_wasdsp_i_nuts0

Original tag: eu_env_wasdsp_i_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste disposal, incineration in thousand tonnes. Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.9.5.2 Municipal waste disposal - incineration in thousand tonnes (eu_env_wasdsp_i_nuts1)

Long tag: qog_eureg_wide1_eu_env_wasdsp_i_nuts1

Original tag: eu_env_wasdsp_i_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.5.5 Municipal waste recovery - energy recovery in thousand tonnes (eu_env_wasrcv_e_nuts0)

Long tag: qog_eureg_wide1_eu_env_wasrcv_e_nuts0

Original tag: eu_env_wasrcv_e_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste energy recovery in thousand tonnes. Energy recovery is defined as the incineration that fulfils the energy efficiency criteria laid down in the Waste Framework Directive (2008/98/EC), Annex II (recovery operation R1). Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste

collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.9.5.6 Municipal waste recovery - energy recovery in thousand tonnes (eu_env_wasrcv_e_nuts1)

Long tag: qog_eureg_wide1_eu_env_wasrcv_e_nuts1

Original tag: eu_env_wasrcv_e_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.5.7 Municipal waste recycling in thousand tonnes (eu_env_wasrcy_c_d_nuts0)

Long tag: qog_eureg_wide1_eu_env_wasrcy_c_d_nuts0

Original tag: eu_env_wasrcy_c_d_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Municipal waste recycling in thousand tonnes. Recycling means any recovery operation by which waste materials are reprocessed into products, materials or substances whether for the original or other purposes. It includes the reprocessing of organic material but does not include energy recovery and the reprocessing into materials that are to be used as fuels or for backfilling operations. Municipal waste is mainly produced by households, similar wastes from sources such as commerce, offices and public institutions are included. The amount of municipal waste generated consists of waste collected by or on behalf of municipal authorities and disposed of through the waste management system. The amount of municipal waste treatment is reported for the treatment operations incineration (with and without energy recovery), recycling, composting and landfilling. Data are available in thousand tonnes and kilograms per person. Wastes from agriculture and from industries are not included.

2.9.5.8 Municipal waste recycling in thousand tonnes (eu_env_wasrcy_c_d_nuts1)

Long tag: qog_eureg_wide1_eu_env_wasrcy_c_d_nuts1

Original tag: eu_env_wasrcy_c_d_nuts1

2.9.5.9 Number of cooling degree days (eu_eng_cdd_nuts0)

Long tag: qog_eureg_wide1_eu_eng_cdd_nuts0

Original tag: eu_eng_cdd_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of cooling degree days (CDD). Cooling degree day (CDD) index is a weather-based technical index designed to describe the need for the cooling (air-conditioning) requirements of buildings. CDD is derived from meteorological observations of air temperature, interpolated to regular grids at 25 km resolution for Europe. Calculated gridded CDD is aggregated and subsequently presented on NUTS-2 level, for 2017 and 2018 also on NUTS-3 level.

2.9.5.10 Number of cooling degree days (eu_eng_cdd_nuts1)

Long tag: qog_eureg_wide1_eu_eng_cdd_nuts1

Original tag: eu_eng_cdd_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.6 Health

This category includes indicators describing the health of a population in a given country. These include reports about the prevalence of infectious diseases, and indicators such as birth rate, death rate, life expectancy. It also provides information on the capacity of the health care system, such as the number of hospital beds available.

2.9.6.1 Number of deaths by circulatory system diseases, female (eu_he_a_cs_f_nuts0)

Long tag: qog_eureg_wide1_eu_he_a_cs_f_nuts0

Original tag: eu_he_a_cs_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by circulatory system diseases, female. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.9.6.2 Number of deaths by circulatory system diseases, female (eu_he_a_cs_f_nuts1)

Long tag: qog_eureg_wide1_eu_he_a_cs_f_nuts1

Original tag: eu_he_a_cs_f_nuts1

Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.9.6.33 Number of deaths by self-harm, female (eu_he_a_sh_f_nuts0)

Long tag: qog_eureg_wide1_eu_he_a_sh_f_nuts0

Original tag: eu_he_a_sh_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths by self-harm, female. Causes of death (COD) statistics are based on information derived from the medical certificate of cause of death. COD target at the underlying cause of death, in accordance with the ICD-10 definition i.e. "the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury". Expressed in deaths per 100,000 inhabitants, it is calculated as the number of deaths recorded in the population for a given period divided by population in the same period and then multiplied by 100,000.

2.9.6.45 Available beds in hospitals (HP.1) per hundred thousand inhabitants (eu_he_a_bed_nuts0)

Long tag: qog_eureg_wide1_eu_he_a_bed_nuts0

Original tag: eu_he_a_bed_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Available beds in hospitals (HP.1) per hundred thousand inhabitants. Health care facilities data refer to available beds in hospitals (HP.1) and subcategories (such as curative care beds, rehabilitative care beds, etc.). Total hospital beds (HP.1) are all hospital beds which are regularly maintained and staffed and immediately available for the care of admitted patients. Total hospital beds are broken down as follows: i) curative care (acute care) beds; ii) rehabilitative care beds; iii) long-term care beds (excluding psychiatric care beds) and iv) other hospital beds. The definition of health care facilities follows the International Classification for Health Accounts - Providers of health care (ICHA-HP) of the System of Health Accounts (SHA).

Long tag: qog_eureg_wide1_eu_hea_dent_nuts0

Original tag: eu_hea_dent_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Dentists, per hundred thousand inhabitants. Health care staff data refer to human resources available for providing health care services in the country, irrespective of the sector of employment (i.e. whether they are independent, employed by a hospital or any other health care provider). 'Manpower' categories focus on health care professionals (physicians, dentists, nursing and caring professionals, pharmacists, physiotherapists). Three different concepts are used to present the number of health care professionals: i) 'practising', i.e. health care professionals providing services directly to patients; ii) 'professionally active', i.e. 'practising' health care professionals plus health care professionals for whom their medical education is a prerequisite for the execution of the job; iii) 'licensed to practice', i.e. health care professionals who are registered and entitled to practice as health care professionals.

'Manpower' categories focus on health care professionals (physicians, dentists, nursing and caring professionals, pharmacists, physiotherapists). Three different concepts are used to present the number of health care professionals: i) 'practising', i.e. health care professionals providing services directly to patients; ii) 'professionally active', i.e. 'practising' health care professionals plus health care professionals for whom their medical education is a prerequisite for the execution of the job; iii) 'licensed to practice', i.e. health care professionals who are registered and entitled to practice as health care professionals.

2.9.6.62 Nurses and midwives per hundred thousand inhabitants (eu_hea_nurs_nuts1)

Long tag: qog_eureg_wide1_eu_hea_nurs_nuts1

2.9.7 Science and Technology

This category provides information on employment rates in different sectors, for the total population as well as subgroups.

2.9.7.1 Employment in agriculture, fishing and mining, percent of tot. employment, female (eu_emtk_ab_f_nuts0)

Long tag: qog_eureg_wide1_eu_emtk_ab_f_nuts0

Original tag: eu_emtk_ab_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female employment in agriculture, forestry and fishing; mining and quarrying, as percentage of total female employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.9.7.2 Employment in agriculture, fishing and mining, percent of tot. employment, female (eu_emtk_ab_f_nuts1)

Long tag: qog_eureg_wide1_eu_emtk_ab_f_nuts1

Description:

Employment in electricity, gas, steam and air conditioning supply; water supply and construction, as percentage of total employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.9.7.24 Employment in electricity, gas and water supply, percent of tot. employment, total (eu_emtk_df_t_nuts1)

Long tag: qog_eureg_wide1_eu_emtk_df_t_nuts1

Male employment in total knowledge-intensive services, as percentage of total male employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

Female employment in education, as percentage of total female employment. Data come from EU Labour force survey (LFS). Employed people are defined as persons aged 15 years and over who during the reference week performed work, even for just one hour a week, for pay, profit or family gain or were not at work but had a job or business from which they were temporarily absent because of, e.g., illness, holidays, industrial dispute and education and training. In high-tech statistics the population excludes anyone below the age of 15 or over the age of 74. The data are aggregated based on the statistical classification of economic activities in the European Community (NACE) at 2-digit level.

2.9.7.80 Employment in education, percent of tot. employment, female (eu_emtk_p_f_nuts1)

2.9.8 Poverty and Social Exclusion

This category describes the share of the population living in or at risk of poverty.

2.9.8.1 At-risk-of-poverty rate by NUTS regions, percentage (eu_povrisk_pc_nuts0)

Long tag: qog_eureg_wide1_eu_povrisk_pc_nuts0

Original tag: eu_povrisk_pc_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population at-risk-of-poverty rate by NUTS 2 regions. The persons with an

equivalised disposable income below the risk-of-poverty threshold, which is set at 60 percent of the national median equivalised disposable income (after social transfers).

2.9.8.2 At-risk-of-poverty rate by NUTS regions, percentage (eu_povrisk_pc_nuts1)

Long tag: qog_eureg_wide1_eu_povrisk_pc_nuts1

Original tag: eu_povrisk_pc_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population at-risk-of-poverty rate by NUTS 2 regions. The persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60 percent of the national median equivalised disposable income (after social transfers).

2.9.8.3 People (0 to 59 years) in households with low work intensity, as percent (eu_lwoin_pc_nuts0)

Long tag: qog_eureg_wide1_eu_lwoin_pc_nuts0

Original tag: eu_lwoin_pc_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Population aged 0-59 living in households with very low work intensity by NUTS regions, as a percentage of total population. People living in households with very low work intensity are people aged 0-59 living in households where the adults work less than 20percent of their total work potential during the past year.

2.9.8.4 People (0 to 59 years) in households with low work intensity, percent of total pop. (eu_lwoin_pc_y_lt60_nuts0)

Long tag: qog_eureg_wide1_eu_lwoin_pc_y_lt60_nuts0

Original tag: eu_lwoin_pc_y_lt60_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Population aged 0-59 living in households with very low work intensity by NUTS regions, as a percentage of total population aged less than 60. People living in households with very low work intensity are people aged 0-59 living in households where the adults work less than 20percent of their total work potential during the past year.

2.9.8.5 People (0 to 59 years) in households with low work intensity, percent of total pop. (eu_lwoin_pc_y_lt60_nuts1)

Long tag: qog_eureg_wide1_eu_lwoin_pc_y_lt60_nuts1

Original tag: eu_lwoin_pc_y_lt60_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Population aged 0-59 living in households with very low work intensity by NUTS regions, as a percentage of total population aged less than 60. People living in households with very low work intensity are people aged 0-59 living in households where the adults work less than 20percent of their total work potential during the past year.

2.9.8.6 Severe material deprivation rate by NUTS regions, percentage (eu_matdep_pc_nuts0)

Long tag: qog_eureg_wide1_eu_matdep_pc_nuts0

Original tag: eu_matdep_pc_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population living in conditions of severe material deprivation by NUTS 2 regions. The collection *material deprivation* covers indicators relating to economic strain, durables, housing and environment of the dwelling. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 following deprivations items: they cannot afford i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, ix) a telephone.

2.9.8.7 Severe material deprivation rate by NUTS regions, percentage (eu_matdep_pc_nuts1)

Long tag: qog_eureg_wide1_eu_matdep_pc_nuts1

Original tag: eu_matdep_pc_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of total population living in conditions of severe material deprivation by NUTS 2 regions. The collection *material deprivation* covers indicators relating to economic strain, durables, housing and environment of the dwelling. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 following deprivations items: they cannot afford i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, ix) a telephone.

2.9.8.8 People at risk of poverty or social exclusion by NUTS regions, percentage (eu_povr_pc_nuts0)

Long tag: qog_eureg_wide1_eu_povr_pc_nuts0

Original tag: eu_povr_pc_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

People at risk of poverty or social exclusion by NUTS 2 regions, percentage of total population. Persons who are at risk of poverty or severely materially deprived or living in households with very low work intensity. Persons are only counted once even if they are present in several sub-indicators. At risk-of-poverty are persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60 percent of the national median equivalised disposable income (after social transfers). Material deprivation covers indicators relating to economic strain and durables. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 following deprivations items: cannot afford i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, or ix) a telephone. People living in households with very low work

intensity are those aged 0-59 living in households where the adults (aged 18-59) work less than 20percent of their total work potential during the past year.

2.9.8.9 People at risk of poverty or social exclusion by NUTS regions, percentage (eu_povr_pc_nuts1)

Long tag: qog_eureg_wide1_eu_povr_pc_nuts1

Original tag: eu_povr_pc_nuts1

2.9.9 Digital Society and Economy

This category includes variables related to internet use and the use of the internet for economic purposes, such as purchases or banking.

2.9.9.1 Last online purchase: between 3 and 12 months ago, percentage (eu_igs_b3_12_nuts0)

Long tag: qog_eureg_wide1_eu_igs_b3_12_nuts0

Original tag: eu_igs_b3_12_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of individuals whose last online purchase between 3 and 12 months ago. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. The population of individuals consists of all individuals aged 16 to 74 (on an optional basis some countries collect separate data on other age groups, individuals aged 15 years or less, aged 75 or more). Regional breakdowns have been provided on a voluntary basis for 2006 and 2007 according to NUTS1 or NUTS2 by several countries. Starting from 2008, the collection of NUTS1 breakdowns is obligatory (regional breakdowns for all countries are available) while NUTS2 breakdowns are still optional.

2.9.9.2 Last online purchase: between 3 and 12 months ago, percentage (eu_igs_b3_12_nuts1)

Long tag: qog_eureg_wide1_eu_igs_b3_12_nuts1

Original tag: eu_igs_b3_12_nuts1

Description:

Percentage of households with internet access. Data given in this domain are collected annually by the National Statistical Institutes and are based on Eurostat's annual model questionnaires on ICT (Information and Communication Technologies) usage in households and by individuals. The survey comprises questions at household level and individual level. The population of households consists of all private households having at least one member in the age group 16 to 74 years. The population of individuals consists of all individuals aged 16 to 74 (on an optional basis some countries collect separate data on other age groups, individuals aged 15 years or less, aged 75 or more). Regional breakdowns have been provided on a voluntary basis for 2006 and 2007 according to NUTS1 or NUTS2 by several countries. Starting from 2008, the collection of NUTS1 breakdowns is obligatory (regional breakdowns for all countries are available) while NUTS2 breakdowns are still optional.

2.9.9.23 Individuals who accessed internet away from home or work, percent (eu_iu_ohw_nuts0)

2.9.10 Labour Market Statistics

This category includes variables about employment and unemployment rates, in general, as well as in subgroups of the population.

2.9.10.1 Full-time employment, female, in thousands (eu_emp_ft_f_nuts0)

Long tag: qog_eureg_wide1_eu_emp_ft_f_nuts0

Original tag: eu_emp_ft_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Full-time female employment, in thousands. The source for the regional labour market information is the EU Labour Force Survey (EU-LFS). This is a quarterly household sample survey conducted in all Member States of the EU, the United Kingdom, EFTA and Candidate Countries (Montenegro, North Macedonia, Serbia and Turkey). The definitions of employment and unemployment, as well as other survey characteristics follow the definitions and recommendations of the International Labour Organisation (ILO). The definition of unemployment is further specified in Commission Regulation (EC) No 1897/2000.

2.9.10.2 Full-time employment, female, in thousands (eu_emp_ft_f_nuts1)

Long tag: qog_eureg_wide1_eu_emp_ft_f_nuts1

Original tag: eu_ltu_pc_une_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Long-term unemployment as a percentage of unemployment. Long-term unemployment is defined as being unemployed for 12 months or longer. Unemployed persons comprise persons aged 15 to 74 who fulfil all the three following conditions: - are without work during the reference week; - are available to start work within the next two weeks; - have been actively seeking work in the past four weeks or have already found a job to start within the next three months. The source for the regional labour market information is the EU Labour Force Survey (EU-LFS). This is a quarterly household sample survey conducted in all Member States of the EU, the United Kingdom, EFTA and Candidate Countries (Montenegro, North Macedonia, Serbia and Turkey). The definitions of employment and unemployment, as well as other survey characteristics follow the definitions and recommendations of the International Labour Organisation (ILO).

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total unemployment rate for people aged 15 years and over. Unemployed persons comprise persons who fulfil all the three following conditions: - are without work during the reference week; - are available to start work within the next two weeks; - have been actively seeking work in the past four weeks or have already found a job to start within the next three months. The source for the regional labour market information is the EU Labour Force Survey (EU-LFS). This is a quarterly household sample survey conducted in all Member States of the EU, the United Kingdom, EFTA and Candidate Countries (Montenegro, North Macedonia, Serbia and Turkey). The definitions of employment and unemployment, as well as other survey characteristics follow the definitions and recommendations of the International Labour Organisation (ILO).

2.9.11 Economy

This category provides information on household incomes and GDP.

2.9.11.1 Income of households (Balance) in euro per inhabitant (eu_b5n_eur_hab_nuts0)

Long tag: qog_eureg_wide1_eu_b5n_eur_hab_nuts0

Original tag: eu_b5n_eur_hab_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Income of households (balance), Euro per inhabitant. The disposable income of private households is the balance of primary income (operating surplus/mixed income plus compensation of employees plus property income received minus property income paid) and the redistribution of income in cash. These transactions comprise social contributions paid, social benefits in cash received, current taxes on income and wealth paid, as well as other current transfers. Disposable income does not include social transfers in kind coming from public administrations or non-profit institutions serving households.

2.9.11.2 Income of households (Balance) in euro per inhabitant (eu_b5n_eur_hab_nuts1)

Long tag: qog_eureg_wide1_eu_b5n_eur_hab_nuts1

Original tag: eu_b5n_eur_hab_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Income of households (balance), Euro per inhabitant. The disposable income of private

households is the balance of primary income (operating surplus/mixed income plus compensation of employees plus property income received minus property income paid) and the redistribution of income in cash. These transactions comprise social contributions paid, social benefits in cash received, current taxes on income and wealth paid, as well as other current transfers. Disposable income does not include social transfers in kind coming from public administrations or non-profit institutions serving households.

2.9.11.21 Regional gross domestic product by NUTS 2 regions, million EUR (eu_mio_eur_nuts0)

Long tag: qog_eureg_wide1_eu_mio_eur_nuts0

Original tag: eu_mio_eur_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Regional gross domestic product (GDP) by NUTS 2 regions in Million euro. GDP is an indicator of the output of a country or a region. It reflects the total value of all goods and services produced less the value of goods and services used for intermediate consumption in their production. Expressing GDP in PPS (purchasing power standards) eliminates differences in price levels between countries. Calculations on a per inhabitant basis allow for the comparison of economies and regions significantly different in absolute size. GDP per inhabitant in PPS is the key variable for determining the eligibility of NUTS 2 regions in the framework of the European Union's structural policy.

2.9.11.22 Regional gross domestic product by NUTS 2 regions, million EUR (eu_mio_eur_nuts1)

Long tag: qog_eureg_wide1_eu_mio_eur_nuts1

Original tag: eu_mio_eur_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.9.12 Tourism

This category includes information about available hotel beds as well as the number of days spent in tourist accommodation.

2.9.12.1 Number of bed-places in hotels, camping places and other (eu_tour_nstour_bedpl_nuts0)

Long tag: qog_eureg_wide1_eu_tour_nstour_bedpl_nuts0

Original tag: eu_tour_nstour_bedpl_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of bed-places in hotels, camping places and other. The number of bed-places in an establishment or dwelling is determined by the number of persons who can stay overnight in the beds set up in the establishment (dwelling), ignoring any extra beds that may be set up by customer request. The term bed place applies to a single bed, double beds are counted as two bed-places. The unit serves to measure the capacity of any type of accommodation. A bed place is also a place on a pitch or in a boat on a mooring to accommodate one person. One camping pitch should equal four bed-places if the actual number of bed-places is not known.

2.9.12.2 Number of bed-places in hotels, camping places and other (eu_tour_nstour_bedpl_nuts1)

Long tag: qog_eureg_wide1_eu_tour_nstour_bedpl_nuts1

Original tag: eu_tour_nstour_bedpl_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

2.9.12.3 Number of establishments in hotels, camping places and other (eu_tour_nstour_estbl_nuts0)

Long tag: qog_eureg_wide1_eu_tour_nstour_estbl_nuts0

Original tag: eu_tour_nstour_estbl_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of establishments in hotels, camping places and other. A tourist accommodation establishment is defined as any facility that regularly or occasionally provides short-term accommodation for tourists as a paid service (although the price might be partially or fully subsidised). Data is reported at the level of a local kind-of-activity unit. The local unit is an enterprise or part thereof situated in a geographically identified place. At or from this place economic activity is carried out for which - save for certain exceptions - one or more persons work (even if only part-time) for one and the same enterprise. The accommodation establishment conforms to the definition of local unit as the production unit. This is irrespective of whether the accommodation of tourists is the main or secondary activity. This means that all establishments are classified in the accommodation sector if their capacity exceeds the national minimum even if the major part of turnover may come from restaurant or other services.

2.9.12.4 Number of establishments in hotels, camping places and other (eu_tour_nstour_estbl_nuts1)

Long tag: qog_eureg_wide1_eu_tour_nstour_estbl_nuts1

2.9.12.5 Net occupancy rate of bed-places in hotels and similar (eu_tour_bedpl_nuts0)

Long tag: qog_eureg_wide1_eu_tour_bedpl_nuts0

Original tag: eu_tour_bedpl_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Net occupancy rate of bed-places in hotels and similar. The occupancy rate of bed-places in reference period is obtained by dividing the total number of overnight stays by the number of the bed-places on offer (excluding extra beds) and the number of days when the bed-places are actually available for use (net of seasonal closures and other temporary closures for decoration, by police order, etc.). The result is multiplied by 100 to express the occupancy rate as a percentage. From reference period 2012 onwards, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Regulation (EU) 692/2011 of the European Parliament and of the Council. Up to reference period 2011, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Council Directive on tourism statistics 95/57/EC .

2.9.12.6 Net occupancy rate of bed-places in hotels and similar (eu_tour_bedpl_nuts1)

Long tag: qog_eureg_wide1_eu_tour_bedpl_nuts1

Original tag: eu_tour_bedpl_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

2.9.12.9 Number of nights spent at camping grounds, recreational vehicle and trailer park (eu_tour_nscamp_nuts0)

Long tag: qog_eureg_wide1_eu_tour_nscamp_nuts0

Original tag: eu_tour_nscamp_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of nights spent at camping grounds, recreational vehicle parks and trailer parks. A night spent (or overnight stay) is each night a guest / tourist (resident or non-resident) actually spends (sleeps or stays) in a tourist accommodation establishment or non-rented accommodation. Normally the date of arrival is different from the date of departure but persons arriving after midnight and leaving on the same day are included in overnight stays.

A person should not be registered in two or more accommodation establishments at the same time. From reference period 2012 onwards, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Regulation (EU) 692/2011 of the European Parliament and of the Council. Up to reference period 2011, tourism occupancy statistics consist of harmonised data collected by the Member States in the frame of the Council Directive on tourism statistics 95/57/EC .

2.9.13 Transport

This category provides information on the means of transportation used as well as available vehicles and the road infrastructure.

2.9.13.1 Injured victims in road accidents, per million inhabitants (eu_rac_inj_nuts0)

Long tag: qog_eureg_wide1_eu_rac_inj_nuts0

Original tag: eu_rac_inj_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Injured victims in road accidents, per million inhabitants. It includes any person who as result of an injury accident was not killed immediately or not dying within 30 days, but sustained an injury, normally needing medical treatment, excluding attempted suicides. Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured. An injured person is excluded if the competent authority declares the cause of the injury to be attempted suicide by that person, i.e. a deliberate act to injure oneself resulting in injury, but not in death.

2.9.13.2 Injured victims in road accidents, per million inhabitants (eu_rac_inj_nuts1)

Long tag: qog_eureg_wide1_eu_rac_inj_nuts1

Original tag: eu_rac_inj_nuts1

Description:

Total number of motor coaches, buses and trolley buses. Motor coach is passenger road motor vehicle designed to seat 24 or more persons (including the driver) and constructed exclusively for the carriage of seated passengers. Bus is defined as passenger road motor vehicle designed to carry more than 24 persons (including the driver), and with provision to carry seated as well as standing passengers. Trolleybus is passenger road vehicle designed to seat more than nine persons (including the driver), which is connected to electric conductors and which is not rail-borne. This term covers vehicles which may be used either as trolleybuses or as buses, if they have a motor independent of the main electric power supply.

Original tag: eu_vs_utl_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of total utility vehicles.

2.9.13.60 Total number of trailers and semi-trailers (eu_vs_utl_nuts1)

Long tag: qog_eureg_wide1_eu_vs_utl_nuts1

Original tag: eu_vs_utl_nuts1

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total number of total utility vehicles.

2.10 QoG EU Regional Dataset Wide Data (NUTS 2)

Dataset tag: qog_eureg_wide2

Output Unit: QoG NUTS Region-Year, i.e., data is collected per European NUTS region and year. This means that every row in the dataset can be identified through a combination of region and year. The unit can be expressed using the columns region_code and year. The unit can also be expressed through a combination of the columns nuts0, nuts2 and year.

Description: The QoG EU Regional dataset is a dataset consisting of more than 300 variables covering three levels of European regions - Nomenclature of Territorial Units for Statistics (NUTS): NUTS0 (country), NUTS1(major socio-economic regions) and NUTS2 (basic regions for the application of regional policies).

The QoG Regional Data is presented in three different forms available in separate datasets. The variables are the same across all three datasets besides a varying suffix (`_nuts0`, `_nuts1`, `_nuts2`) indicating which NUTS level is represented.

All datasets are available in time-series format. The first one (The QoG Regional Data - Long Form) is a dataset where data is presented in the long form. The list of units of analysis contains regions of all NUTS levels.

Two other datasets are presented in the wide form for multilevel analysis. In the second dataset (The QoG Regional Data - Wide Form NUTS1) includes NUTS1 level as the unit of analysis and variables represent the values for this level and corresponding lower level – NUTS0. As an example, in this dataset the data is presented only for East Sweden (Ostra Sverige SE1), as a unit of analysis and has values for lower levels of this region - Sweden (SE).

In the third dataset (The QoG Regional Data - Wide Form NUTS2) the unit of analysis is NUTS2 level regions and variables provide values as for every unit of analysis, as well as for corresponding lower NUTS levels: NUTS1 and NUTS0. One example of unit of analysis in this dataset is Stockholm (SE11) and data for every variable will be for Stockholm, as well as for lower level regions - East Sweden (Ostra Sverige SE1) and Sweden (SE).

Dataset citation: When using QoG EU Regional data, make sure to cite both the original source and our publication:

Charron, Nicholas, Stefan Dahlberg, Aksel Sundström, Sören Holmberg, Bo Rothstein, Natalia Alvarado Pachon Cem Mert Dalli. 2020. The Quality of Government EU Regional Dataset, version Nov20. University of Gothenburg: The Quality of Government Institute, <https://www.gu.se/en/quality-government>

License: The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful that the original data sources are the only owners of their data and they can adjust their license without previous warning.

More detailed information on the dataset can be found at the following web page: <https://www.gu.se/en/quality-government/qog-data/data-downloads/eu-regional-dataset>

2.10.1 Identification

Identification variables in the dataset.

2.10.1.1 NUTS code of region (region_code)

Long tag: `qog_eureg_wide2_region_code`

Original tag: `region_code`

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Description:

Numerical code of the region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

2.10.1.2 Name of the region (region_name)*Long tag:* qog_eureg_wide2_region_name*Original tag:* region_name*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Description:*

Name of the region in English.

2.10.1.3 Year (year)*Long tag:* qog_eureg_wide2_year*Original tag:* year*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Description:*

Year of observation. If you are using data from previous waves (2010, 2013 and 2017), please also check "Suggestion Citation for Previous Waves";.

2.10.1.4 Code of NUTS0 level region (nuts0)*Long tag:* qog_eureg_wide2_nuts0*Original tag:* nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Description:*

Code of NUTS0 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 0: country level.

2.10.1.5 Code of NUTS2 level region (nuts2)*Long tag:* qog_eureg_wide2_nuts2*Original tag:* nuts2*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Description:*

Code of NUTS2 level region to which the observation belongs. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes. NUTS 2: basic regions for the application of regional policies.

2.10.1.6 The Nomenclature of Territorial Units for Statistics (NUTS) level (nuts_level)*Long tag:* qog_eureg_wide2_nuts_level*Original tag:* nuts_level*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Description:*

To what level of NUTS belong observation. The Nomenclature of Territorial Units for Statistics, (NUTS), is a geocode standard for referencing the administrative divisions of countries for statistical purposes.

(0) Country level

(1) Major socio-economic regions

(2) Basic regions for the application of regional policies

2.10.2 Quality of Government

This category includes variables that are the core features of QoG (impartiality, bureaucratic quality and corruption) as well as measures that are broader (rule of law and transparency).

2.10.2.1 Number of awarded contracts above 130,000 EUR (cri_contr_nuts0)

Long tag: qog_eureg_wide2_cri_contr_nuts0

Original tag: cri_contr_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

2.10.2.2 Number of awarded contracts above 130,000 EUR (cri_contr_nuts2)

Long tag: qog_eureg_wide2_cri_contr_nuts2

Original tag: cri_contr_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Number of successfully awarded contracts within tenders published on TED above 130k EUR threshold.

2.10.2.3 Final value of awarded tenders of over 130,000 EUR (cri_cvalue_nuts0)

Long tag: qog_eureg_wide2_cri_cvalue_nuts0

Original tag: cri_cvalue_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Sum of the final value of successfully awarded tenders published on TED above 130k EUR threshold.

2.10.2.4 Final value of awarded tenders of over 130,000 EUR (cri_cvalue_nuts2)

Long tag: qog_eureg_wide2_cri_cvalue_nuts2

Original tag: cri_cvalue_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Sum of the final value of successfully awarded tenders published on TED above 130k EUR threshold.

2.10.2.5 Share of contracts with only one bid in total (cri_singleb_nuts0)

Long tag: qog_eureg_wide2_cri_singleb_nuts0

Original tag: cri_singleb_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with only one bid in total.

2.10.2.6 Share of contracts with only one bid in total (cri_singleb_nuts2)

Long tag: qog_eureg_wide2_cri_singleb_nuts2

Original tag: cri_singleb_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with only one bid in total.

2.10.2.7 Share of contracts with no published call for tender red flag (cri_nocall_nuts0)

Long tag: qog_eureg_wide2_cri_nocall_nuts0

Original tag: cri_nocall_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'no published call for tender' red flag. A contract is considered to have 'no call for tender' red flag if two conditions are met: i) The sum of prior information notices and contract notices equals 0 and ii) The country of a buyer is not on the list of countries in which 'no call for tender publication' is not a risk factor. These countries are BG, DK, EE, ES, and LT.

2.10.2.8 Share of contracts with no published call for tender red flag (cri_nocall_nuts2)

Long tag: qog_eureg_wide2_cri_nocall_nuts2

Original tag: cri_nocall_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'no published call for tender' red flag. A contract is considered to have 'no call for tender' red flag if two conditions are met: i) The sum of prior information notices and contract notices equals 0 and ii) The country of a buyer is not on the list of countries in which 'no call for tender publication' is not a risk factor. These countries are BG, DK, EE, ES, and LT.

2.10.2.9 Share of contracts with non-open procedure red flag (cri_nonopen_nuts0)

Long tag: qog_eureg_wide2_cri_nonopen_nuts0

Original tag: cri_nonopen_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'non-open procedure' red flag. Whether a procedure is considered non-open depends on procedure type as well as specific country regulation. Please refer to the 'Non-open procedure details' sheet to search for country-procedure combinations.

2.10.2.10 Share of contracts with non-open procedure red flag (cri_nonopen_nuts2)

Long tag: qog_eureg_wide2_cri_nonopen_nuts2

Original tag: cri_nonopen_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'non-open procedure' red flag. Whether a procedure is considered non-open depends on procedure type as well as specific country regulation. Please refer to the 'Non-open procedure details' sheet to search for country-procedure combinations.

2.10.2.11 Share of contracts with tax haven red flag (cri_taxhav_nuts0)

Long tag: qog_eureg_wide2_cri_taxhav_nuts0

Original tag: cri_taxhav_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'tax haven' red flag. A contract has a 'tax haven' red flag in case two conditions are met: i) buyer and supplier are from different countries and ii) according to Financial Secrecy Index (<https://www.financialsecrecyindex.com/en/>) supplier country was classified as a tax haven.

2.10.2.12 Share of contracts with tax haven red flag (cri_taxhav_nuts2)

Long tag: qog_eureg_wide2_cri_taxhav_nuts2

Original tag: cri_taxhav_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Fazekas & Kocsis (2020)

Description:

Share of contracts with 'tax haven' red flag. A contract has a 'tax haven' red flag in case two conditions are met: i) buyer and supplier are from different countries and ii) according to Financial Secrecy Index (<https://www.financialsecrecyindex.com/en/>) supplier country was classified as a tax haven.

2.10.2.13 EQI Index Score (eqi_score_nuts0)

Long tag: qog_eureg_wide2_eqi_score_nuts0

Original tag: eqi_score_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final score of European Quality Index (centered around WGI), all units. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.10.2.14 EQI Index Score (eqi_score_nuts2)

Long tag: qog_eureg_wide2_eqi_score_nuts2

Original tag: eqi_score_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Final score of European Quality Index (centered around WGI), all units. Detailed information on its calculation method and indicators used for this aggregation can be found in [European Quality of Government Index 2017 Codebook](#);

2.10.2.15 Quality pillar, country centered and z-score standardized (eqi_zquality_nuts0)

Long tag: qog_eureg_wide2_eqi_zquality_nuts0

Original tag: eqi_zquality_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI quality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.10.2.16 Quality pillar, country centered and z-score standardized (eqi_zquality_nuts2)

Long tag: qog_eureg_wide2_eqi_zquality_nuts2

Original tag: eqi_zquality_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI quality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question on the quality of public services is now a regional 'indicator'. After normalizing each of quality indicators (through z-score standardization) so that they share a common range, the quality indicators are aggregated into 'quality pillar'.

2.10.2.17 Impartiality pillar, country centered and z-score standardized (eqi_zimpartiality_nuts0)

Long tag: qog_eureg_wide2_eqi_zimpartiality_nuts0

Original tag: eqi_zimpartiality_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI impartiality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.10.2.18 Impartiality pillar, country centered and z-score standardized (eqi_zimpartiality_nuts2)

Long tag: qog_eureg_wide2_eqi_zimpartiality_nuts2

Original tag: eqi_zimpartiality_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI impartiality pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing impartiality in the provision of public services is now a regional 'indicator'. After normalizing each of impartiality indicators (through z-score standardization) so that they share a common range, the impartiality indicators are aggregated into 'impartiality pillar'.

2.10.2.19 Corruption pillar, country centered and z-score standardized (eqi_zcorruption_nuts0)

Long tag: qog_eureg_wide2_eqi_zcorruption_nuts0

Original tag: eqi_zcorruption_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.10.2.20 Corruption pillar, country centered and z-score standardized (eqi_zcorruption_nuts2)

Long tag: qog_eureg_wide2_eqi_zcorruption_nuts2

Original tag: eqi_zcorruption_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption pillar, country centered and z-score standardized. For its calculation, they aggregate the individual scores ('survey question') to the corresponding regional level, so that each of question assessing corruption in the provision of public services is now a regional 'indicator'. After normalizing each of corruption indicators (through z-score standardization) so that they share a common range, the corruption indicators are aggregated into two sub-pillars, called 'experience' and 'perceptions'. They respectively represent question items reflecting personal experience with petty corruption versus perception of corruption in various other areas. These two sub-pillars are aggregated using equal weighting.

2.10.2.21 Corruption perceptions index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptper_nuts2)

Long tag: qog_eureg_wide2_eqi_zcorruptper_nuts2

Original tag: eqi_zcorruptper_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption perceptions index, z-score standardized. It constitutes one of the sub-pillars of

corruption pillar.

2.10.2.22 Corruption experiences index (corruption sub-pillar) z-score stand. (2017 only) (eqi_zcorruptexp_nuts2)

Long tag: qog_eureg_wide2_eqi_zcorruptexp_nuts2

Original tag: eqi_zcorruptexp_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI corruption experiences index, z-score standardized. It constitutes one of the sub-pillars of corruption pillar.

2.10.2.23 EQI index, min-max (0-100) standardized (eqi_norm_eqi_nuts0)

Long tag: qog_eureg_wide2_eqi_norm_eqi_nuts0

Original tag: eqi_norm_eqi_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI index, min-max (0-100) standardized. Detailed information on its calculation method and indicators used for this aggregation can be found in ["European Quality of Government Index 2017 Codebook"](#).

2.10.2.24 EQI index, min-max (0-100) standardized (eqi_norm_eqi_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_eqi_nuts2

Original tag: eqi_norm_eqi_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

EQI index, min-max (0-100) standardized. Detailed information on its calculation method and indicators used for this aggregation can be found in ["European Quality of Government Index 2017 Codebook"](#).

2.10.2.25 Quality pillar, country centered and min-max (0-100) standardized (eqi_norm_qual_nuts0)

Long tag: qog_eureg_wide2_eqi_norm_qual_nuts0

Original tag: eqi_norm_qual_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and min-max (0-100) standardized.

2.10.2.26 Quality pillar, country centered and min-max (0-100) standardized (eqi_norm_qual_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_qual_nuts2

Original tag: eqi_norm_qual_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Quality pillar, country centered and min-max (0-100) standardized.

2.10.2.27 Impartiality pillar, country centered and min-max (0-100) standardized (eqi_norm_impact_nuts0)

Long tag: qog_eureg_wide2_eqi_norm_impact_nuts0

Original tag: eqi_norm_impact_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and min-max (0-100) standardized.

2.10.2.28 Impartiality pillar, country centered and min-max (0-100) standardized (eqi_norm_impact_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_impact_nuts2

Original tag: eqi_norm_impact_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Impartiality pillar, country centered and min-max (0-100) standardized.

2.10.2.29 Corruption pillar, country centered and min-max (0-100) standardized (eqi_norm_corrupt_nuts0)

Long tag: qog_eureg_wide2_eqi_norm_corrupt_nuts0

Original tag: eqi_norm_corrupt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and min-max (0-100) standardized.

2.10.2.30 Corruption pillar, country centered and min-max (0-100) standardized (eqi_norm_corrupt_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_corrupt_nuts2

Original tag: eqi_norm_corrupt_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption pillar, country centered and min-max (0-100) standardized.

2.10.2.31 Corruption perceptions index (corruption sub-pillar) min-max (0-100)(2017) (eqi_norm_corruptper_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_corruptper_nuts2

Original tag: eqi_norm_corruptper_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption perceptions index (corruption sub-pillar), min-max (0-100) standardized.

2.10.2.32 Corruption experiences index (corruption sub-pillar) min-max (0-100) (2017) (eqi_norm_corruptexp_nuts2)

Long tag: qog_eureg_wide2_eqi_norm_corruptexp_nuts2

Original tag: eqi_norm_corruptexp_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: Charron et al. (2019), Charron et al. (2014)

Description:

Corruption experiences index (corruption sub-pillar) min-max (0-100) standardized.

2.10.3 Demographics

This category includes variables describing the demographic characteristics of a population, such as its size, life-expectancy, fertility rates and death rates.

2.10.3.1 Reported number of cases of burglary of private premises (eu_cri_bur_nuts0)

Long tag: qog_eureg_wide2_eu_cri_bur_nuts0

Original tag: eu_cri_bur_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of burglary of private premises. Domestic burglary is defined as gaining access to a dwelling by the use of force to steal goods.

2.10.3.2 Reported number of cases of burglary of private premises (eu_cri_bur_nuts2)

Long tag: qog_eureg_wide2_eu_cri_bur_nuts2

Original tag: eu_cri_bur_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of burglary of private premises. Domestic burglary is defined as gaining access to a dwelling by the use of force to steal goods.

2.10.3.3 Reported number of cases of intentional homicide (eu_cri_inthom_nuts0)

Long tag: qog_eureg_wide2_eu_cri_inthom_nuts0

Original tag: eu_cri_inthom_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Reported number of cases of intentional homicide. It is defined as intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. Causing death by dangerous driving is excluded, as are abortion and help with suicide. Attempted (uncompleted) homicide is also excluded. The counting unit for homicide is normally the victim (rather than the case).

2.10.3.4 Reported number of cases of intentional homicide (eu_cri_inthom_nuts2)*Long tag:* qog_eureg_wide2_eu_cri_inthom_nuts2*Original tag:* eu_cri_inthom_nuts2*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Reported number of cases of intentional homicide. It is defined as intentional killing of a person, including murder, manslaughter, euthanasia and infanticide. Causing death by dangerous driving is excluded, as are abortion and help with suicide. Attempted (uncompleted) homicide is also excluded. The counting unit for homicide is normally the victim (rather than the case).

2.10.3.5 Reported number of cases of robbery (eu_cri_rob_nuts0)*Long tag:* qog_eureg_wide2_eu_cri_rob_nuts0*Original tag:* eu_cri_rob_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Reported number of cases of robbery. Robbery is a sub-set of violent crime (see above). It is defined as stealing from a person with force or threat of force, including muggings (bag-snatching) and theft with violence. Pick-pocketing, extortion and blackmailing are generally not included.

2.10.3.6 Reported number of cases of robbery (eu_cri_rob_nuts2)*Long tag:* qog_eureg_wide2_eu_cri_rob_nuts2*Original tag:* eu_cri_rob_nuts2*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Reported number of cases of robbery. Robbery is a sub-set of violent crime (see above). It is defined as stealing from a person with force or threat of force, including muggings (bag-snatching) and theft with violence. Pick-pocketing, extortion and blackmailing are generally not included.

2.10.3.7 Proportion of live births outside marriage (eu_agemoth_nuts0)*Long tag:* qog_eureg_wide2_eu_agemoth_nuts0*Original tag:* eu_agemoth_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Proportion of live births outside marriage. A live birth outside marriage is defined as a live birth where the mother's marital status at the time of birth is other than married.

2.10.3.8 Total fertility rate (eu_agemoth1_nuts0)*Long tag:* qog_eureg_wide2_eu_agemoth1_nuts0*Original tag:* eu_agemoth1_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)

Description:

Total fertility rate. It is defined as the mean number of children who would be born to a woman during her lifetime, if she were to spend her childbearing years conforming to the age-specific fertility rates, that have been measured in a given year.

2.10.3.9 Mean age of women at childbirth (eu_nmarpct_nuts0)

Long tag: qog_eureg_wide2_eu_nmarpct_nuts0

Original tag: eu_nmarpct_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at childbirth. It is calculated as the mean age of women when their children are born.

2.10.3.10 Mean age of women at birth of first child (eu_totferrt_nuts0)

Long tag: qog_eureg_wide2_eu_totferrt_nuts0

Original tag: eu_totferrt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Mean age of women at birth of first child. It is calculated as the mean age of women when their first children are born.

2.10.3.11 Number of deaths of females, all ages (eu_death_totalf_nuts0)

Long tag: qog_eureg_wide2_eu_death_totalf_nuts0

Original tag: eu_death_totalf_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.12 Number of deaths of males, all ages (eu_death_totalm_nuts0)

Long tag: qog_eureg_wide2_eu_death_totalm_nuts0

Original tag: eu_death_totalm_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.13 Number of deaths, total all ages (eu_death_totalt_nuts0)

Long tag: qog_eureg_wide2_eu_death_totalt_nuts0

Original tag: eu_death_totalt_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, all ages. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.14 Number of deaths of females, at 1 year old (eu_death_y1f_nuts0)

Long tag: qog_eureg_wide2_eu_death_y1f_nuts0

Original tag: eu_death_y1f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.15 Number of deaths of males, at 1 year old (eu_death_y1m_nuts0)

Long tag: qog_eureg_wide2_eu_death_y1m_nuts0

Original tag: eu_death_y1m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.16 Number of deaths, total at 1 year old (eu_death_y1t_nuts0)

Long tag: qog_eureg_wide2_eu_death_y1t_nuts0

Original tag: eu_death_y1t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 1 year old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.17 Number of deaths of females, at 20 years old (eu_death_y20f_nuts0)

Long tag: qog_eureg_wide2_eu_death_y20f_nuts0

Original tag: eu_death_y20f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.18 Number of deaths of males, at 20 years old (eu_death_y20m_nuts0)

Long tag: qog_eureg_wide2_eu_death_y20m_nuts0

Original tag: eu_death_y20m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.19 Number of deaths, total at 20 years old (eu_death_y20t_nuts0)

Long tag: qog_eureg_wide2_eu_death_y20t_nuts0

Original tag: eu_death_y20t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 20 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.20 Number of deaths of females, at 50 years old (eu_death_y50f_nuts0)

Long tag: qog_eureg_wide2_eu_death_y50f_nuts0

Original tag: eu_death_y50f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of females, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.21 Number of deaths of males, at 50 years old (eu_death_y50m_nuts0)

Long tag: qog_eureg_wide2_eu_death_y50m_nuts0

Original tag: eu_death_y50m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths of males, at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.22 Number of deaths, total at 50 years old (eu_death_y50t_nuts0)

Long tag: qog_eureg_wide2_eu_death_y50t_nuts0

Original tag: eu_death_y50t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Number of deaths, total at 50 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.23 Number of deaths of females, at 70 years old (eu_death_y70f_nuts0)*Long tag:* qog_eureg_wide2_eu_death_y70f_nuts0*Original tag:* eu_death_y70f_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of females, at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.24 Number of deaths of males, at 70 years old (eu_death_y70m_nuts0)*Long tag:* qog_eureg_wide2_eu_death_y70m_nuts0*Original tag:* eu_death_y70m_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths of males, at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.25 Number of deaths, total at 70 years old (eu_death_y70t_nuts0)*Long tag:* qog_eureg_wide2_eu_death_y70t_nuts0*Original tag:* eu_death_y70t_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Number of deaths, total at 70 years old. Death means the permanent disappearance of all evidence of life at any time after life birth has taken place (postnatal cessation of vital functions without capability of resuscitation).

2.10.3.26 Population at 1st January, Female (eu_d2jan_f_nuts0)*Long tag:* qog_eureg_wide2_eu_d2jan_f_nuts0*Original tag:* eu_d2jan_f_nuts0*Dataset citation:* Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)*Variable citation:* European Commission (2023)*Description:*

Female population as of 1st January of the year indicated. It is based on concept of usual resident population, i.e. the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population figures can be based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers. Usually resident population means all persons having usual residence in a country at the reference time. Usual residence means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The following persons alone are considered to be usual residents of the geographical area in question: a) those who have lived in their place of usual residence for a continuous period of at least 12 months before the reference time; or b) those who arrived in their place of usual residence during the 12 months before the reference time with the intention of staying there for at least one year.

2.10.3.27 Population at 1st January, Female (eu_d2jan_f_nuts2)

Long tag: qog_eureg_wide2_eu_d2jan_f_nuts2

Original tag: eu_d2jan_f_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

2.10.3.36 Population density, average population per square km (eu_per_km2_nuts0)

Long tag: qog_eureg_wide2_eu_per_km2_nuts0

Original tag: eu_per_km2_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Average population density per square km. Population density is the ratio of the (annual average) population of a region to the (land) area of the region; total area (including inland waters) is used when land area is not available.

2.10.3.37 Population density, average population per square km (eu_per_km2_nuts2)

Long tag: qog_eureg_wide2_eu_per_km2_nuts2

Original tag: eu_per_km2_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Average population density per square km. Population density is the ratio of the (annual average) population of a region to the (land) area of the region; total area (including inland waters) is used when land area is not available.

2.10.3.38 Fertility rate, total (eu_frate_total_nuts0)

Long tag: qog_eureg_wide2_eu_frate_total_nuts0

Original tag: eu_frate_total_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total fertility rate. It is the mean number of children that would be born alive to a woman during her lifetime if she were to pass through her childbearing years conforming to the fertility rates by age of a given year.

2.10.3.39 Fertility rate, total (eu_frate_total_nuts2)

Long tag: qog_eureg_wide2_eu_frate_total_nuts2

Original tag: eu_frate_total_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Total fertility rate. It is the mean number of children that would be born alive to a woman during her lifetime if she were to pass through her childbearing years conforming to the fertility rates by age of a given year.

2.10.3.40 Fertility rate, at age 15 (eu_frate_y15_nuts0)

Long tag: qog_eureg_wide2_eu_frate_y15_nuts0

Original tag: eu_frate_y15_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 15. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 15 to the average female population of age 15.

2.10.3.41 Fertility rate, at age 15 (eu_frate_y15_nuts2)

Long tag: qog_eureg_wide2_eu_frate_y15_nuts2

Original tag: eu_frate_y15_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 15. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 15 to the average female population of age 15.

2.10.3.42 Fertility rate, at age 30 (eu_frate_y30_nuts0)

Description:

Fertility rate, at age 30. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 30 to the average female population of age 30.

2.10.3.44 Fertility rate, at age 35 (eu_frate_y35_nuts0)

Long tag: qog_eureg_wide2_eu_frate_y35_nuts0

Original tag: eu_frate_y35_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 35. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 35 to the average female population of age 35.

2.10.3.45 Fertility rate, at age 35 (eu_frate_y35_nuts2)

Long tag: qog_eureg_wide2_eu_frate_y35_nuts2

Original tag: eu_frate_y35_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Fertility rate, at age 35. This age-specific fertility rate is calculated by dividing the number of births of mothers of age 35 to the average female population of age 35.

2.10.3.46 Life expectancy in years at 1 year old, female (eu_mlifexp_f_nuts0)

Long tag: qog_eureg_wide2_eu_mlifexp_f_nuts0

Original tag: eu_mlifexp_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, female. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.47 Life expectancy in years at 1 year old, female (eu_mlifexp_f_nuts2)

Long tag: qog_eureg_wide2_eu_mlifexp_f_nuts2

Original tag: eu_mlifexp_f_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, female. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.48 Life expectancy in years at 1 year old, male (eu_mlifexp_m_nuts0)

Long tag: qog_eureg_wide2_eu_mlifexp_m_nuts0

Original tag: eu_mlifexp_m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, male. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.49 Life expectancy in years at 1 year old, male (eu_mlifexp_m_nuts2)

Long tag: qog_eureg_wide2_eu_mlifexp_m_nuts2

Original tag: eu_mlifexp_m_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, male. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.50 Life expectancy in years at 1 year old, total (eu_mlifexp_t_nuts0)

Long tag: qog_eureg_wide2_eu_mlifexp_t_nuts0

Original tag: eu_mlifexp_t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, total. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.51 Life expectancy in years at 1 year old, total (eu_mlifexp_t_nuts2)

Long tag: qog_eureg_wide2_eu_mlifexp_t_nuts2

Original tag: eu_mlifexp_t_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Life expectancy in years at 1 year old, total. Life expectancy at given exact age is the mean number of years still to be lived by a person who has reached a certain exact age, if subjected throughout the rest of his or her life to the current mortality conditions (age-specific probabilities of dying).

2.10.3.52 Crude rate of net migration plus statistical adjustment (eu_cnmigratrt_nuts2)

Long tag: qog_eureg_wide2_eu_cnmigratrt_nuts2

Original tag: eu_cnmigratrt_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of net migration plus statistical adjustment. Net migration including statistical adjustments the ratio of the net migration including statistical adjustment during the year to the average population in that year. The value is expressed per 1000 inhabitants. The crude rate of net migration is equal to the difference between the crude rate of population change and the crude rate of natural change (that is, net migration is considered as the part of population change not attributable to births and deaths). It is calculated in this way because immigration or emigration flows are either not available or the figures are not reliable.

2.10.3.53 Crude rate of total population change (eu_growrt_nuts2)

Long tag: qog_eureg_wide2_eu_growrt_nuts2

Original tag: eu_growrt_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of total population change. It is the ratio of the total population change during the year to the average population of the area in question in that year. The value is expressed per 1000 inhabitants.

2.10.3.54 Crude rate of natural change of population (eu_natgrowrt_nuts2)

Long tag: qog_eureg_wide2_eu_natgrowrt_nuts2

Original tag: eu_natgrowrt_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Crude rate of natural change. It is the ratio of natural change over a period to the average

population of the area in question during that period. The value is expressed per 1000 inhabitants.

2.10.4 Education

This category includes a variety of indicators related to education, such as educational attainment, the students (age, gender, educational level), and educational outcomes.

2.10.4.1 Educational attainment for ages 25 to 64, primary education, Female (eu_edatt_ed02_y2564f_nuts0)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564f_nuts0

Original tag: eu_edatt_ed02_y2564f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.10.4.2 Educational attainment for ages 25 to 64, primary education, Female (eu_edatt_ed02_y2564f_nuts2)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564f_nuts2

Original tag: eu_edatt_ed02_y2564f_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old females whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.10.4.3 Educational attainment for ages 25 to 64, primary education, Male (eu_edatt_ed02_y2564m_nuts0)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564m_nuts0

Original tag: eu_edatt_ed02_y2564m_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old males whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.10.4.4 Educational attainment for ages 25 to 64, primary education, Male (eu_edatt_ed02_y2564m_nuts2)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564m_nuts2

Original tag: eu_edatt_ed02_y2564m_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old males whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.10.4.5 Educational attainment for ages 25 to 64, primary education, Total (eu_edatt_ed02_y2564t_nuts0)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564t_nuts0

Original tag: eu_edatt_ed02_y2564t_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old population whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). This aggregate refers to levels 0, 1 and 2 of the ISCED 2011 (online code ED0-2). Data up to 2013 refer to ISCED 1997 levels 0, 1 and 2 but also include level 3C short (educational attainment from ISCED level 3 programmes of less than two years).

2.10.4.6 Educational attainment for ages 25 to 64, primary education, Total (eu_edatt_ed02_y2564t_nuts2)

Long tag: qog_eureg_wide2_eu_edatt_ed02_y2564t_nuts2

Original tag: eu_edatt_ed02_y2564t_nuts2

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Percentage of 25-64 years old population whose the highest level of education successfully completed is less than primary, primary and lower secondary education (levels 0-2). 2.10.4.37 Early leavers from education and training as a percentage, Female (eu_eduleave_f_nuts0)

Long tag: qog_eureg_wide2_eu_eduleave_f_nuts0

Original tag: eu_eduleave_f_nuts0

Dataset citation: Charron, Dahlberg, Sundström, Holmberg, Rothstein, Alvarado Pachon & Dalli (2020)

Variable citation: European Commission (2023)

Description:

Female early leavers from education and training as a percentage of the population aged 18-24 with at most lower secondary education and not in further education or training. The indicator is defined as the percentage of the population aged 18-24 with at most lower secondary education and who were not in further education or training during the last four weeks preceding the survey. Lower secondary education refers to ISCED (International Standard Classification of Education) 2011 level 0-2 for data from 2014 onwards and to ISCED 1997 level 0-3C short for data up to 2013. The indicator is based on the EU Labour Force Survey.
