QUESTION: Do poor people enjoy the same level of civil liberties as rich people do?
CLARIFICATION: This question specifies the extent to which the level of civil liberties is generally the same across socioeconomic groups so that people with a low social status are not treated worse than people with high social status. Here, civil liberties are understood to include access to justice, private property rights, freedom of movement, and freedom from forced labor.
RESPONSES:
0: Poor people enjoy much fewer civil liberties than rich people.
1: Poor people enjoy substantially fewer civil liberties than rich people.
2: Poor people enjoy moderately fewer civil liberties than rich people.
3: Poor people enjoy slightly fewer civil liberties than rich people.
4: Poor people enjoy the same level of civil liberties as rich people.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are men able to openly discuss political issues in private homes and in public spaces?
CLARIFICATION: This indicator specifies the extent to which men are able to engage in private discussions, particularly on political issues, in private homes and public spaces (restaurants, public transportation, sports events, work etc.) without fear of harassment by other members of the polity or the public authorities. We are interested in restrictions by the government and its agents but also cultural restrictions or customary laws that are enforced by other members of the polity, sometimes in informal ways.
This question does not ask you to assess the *relative* freedom of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and extremely low — rights to freedom of discussion.
RESPONSES:
0: Not respected. Hardly any freedom of expression exists for men. Men are subject to immediate and harsh intervention and harassment for expression of political opinion.
1: Weakly respected. Expressions of political opinions by men are frequently exposed to intervention and harassment.
2: Somewhat respected. Expressions of political opinions by men are occasionally exposed to intervention and harassment.
3: Mostly respected. There are minor restraints on the freedom of expression in the private sphere, predominantly limited to a few isolated cases or only linked to soft sanctions. But as a rule there is no intervention or harassment if men make political statements.
4: Fully respected. Freedom of speech for men in their homes and in public spaces is not restricted.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Do men enjoy freedom of movement within the country?
CLARIFICATION: This indicator specifies the extent to which all men are able to move freely, in daytime and nighttime, in public thoroughfares, across regions within a country, and to establish permanent residency where they wish. Note that restrictions in movement might be imposed by the state and/or by informal norms and practices. Such restrictions sometimes fall on rural residents, on specific social groups, or on dissidents.
This question does not ask you to assess the *relative* freedom of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and extremely low — freedom of movement.
Do *not* consider restrictions in movement that are placed on ordinary (non-political) criminals. Do not consider restrictions in movement that result from crime or unrest.
RESPONSES:
0: Virtually no men enjoy full freedom of movement (*e.g.*, North Korea).
1: Some men enjoy full freedom of movement, but most do not (*e.g.*, Apartheid South Africa).
2: Most men enjoy some freedom of movement but a sizeable minority does not. Alternatively all men enjoy partial freedom of movement.
3: Most men enjoy full freedom of movement but a small minority does not.
4: Virtually all men enjoy full freedom of movement.

QUESTION: Is there freedom of foreign travel and emigration?

CLARIFICATION: This indicator specifies the extent to which citizens are able to travel freely to and from the country and to emigrate without being subject to restrictions by public authorities.
RESPONSES:
0: Not respected by public authorities. Citizens are rarely allowed to emigrate or travel out of the country. Transgressors (or their families) are severely punished. People discredited by the public authorities are routinely exiled or prohibited from traveling.
1: Weakly respected by public authorities. The public authorities systematically restrict the right to travel, especially for political opponents or particular social groups. This can take the form of general restrictions on the duration of stays abroad or delays/refusals of visas.
2: Somewhat respected by the public authorities. The right to travel for leading political opponents or particular social groups is occasionally restricted but ordinary citizens only met minor restrictions.
3: Mostly respected by public authorities. Limitations on freedom of movement and residence are not directed at political opponents but minor restrictions exist. For example, exit visas may be required and citizens may be prohibited from traveling outside the country when accompanied by other members of their family.
4: Fully respected by the government. The freedom of citizens to travel from and to the country, and to emigrate and repatriate, is not restricted by public authorities.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Is there freedom from political killings?
CLARIFICATION: Political killings are killings by the state or its agents without due process of law for the purpose of eliminating political opponents. These killings are the result of deliberate use of lethal force by the police, security forces, prison officials, or other agents

of the state (including paramilitary groups).
RESPONSES:
0: Not respected by public authorities. Political killings are practiced systematically and they are typically incited and approved by top leaders of government.
1: Weakly respected by public authorities. Political killings are practiced frequently and top leaders of government are not actively working to prevent them.
2: Somewhat respected by public authorities. Political killings are practiced occasionally but they are typically not incited and approved by top leaders of government.
3: Mostly respected by public authorities. Political killings are practiced in a few isolated cases but they are not incited or approved by top leaders of government.
4: Fully respected by public authorities. Political killings are non-existent.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Do men enjoy the right to private property?
CLARIFICATION: Private property includes the right to acquire, possess, inherit, and sell private property, including land. Limits on property rights may come from the state (which may legally limit rights or fail to enforce them); customary laws and practices; or religious or social norms. This question concerns the right to private property, not actual ownership of property.
This question does not ask you to assess the *relative* rights of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and very minimal — property rights.
RESPONSES:
0: Virtually no men enjoy private property rights of any kind.
1: Some men enjoy some private property rights, but most have none.

2: Many men enjoy many private property rights, but a smaller proportion enjoys few or none.
3: More than half of men enjoy most private property rights, yet a smaller share of men have much more restricted rights.
4: Most men enjoy most private property rights but a small minority does not.
5: Virtually all men enjoy all, or almost all property rights.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Do women enjoy the right to private property?
CLARIFICATION: Private property includes the right to acquire, possess, inherit, and sell private property, including land. Limits on property rights may come from the state (which may legally limit rights or fail to enforce them); customary laws and practices; or religious or social norms. This question concerns the right to private property, not actual ownership of property.
This question does not ask you to assess the *relative* rights of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and very minimal — property rights.
RESPONSES:
0: Virtually no women enjoy private property rights of any kind.
1: Some women enjoy some private property rights, but most have none.
2: Many women enjoy many private property rights, but a smaller proportion enjoys few or none.
3: More than half of women enjoy most private property rights, yet a smaller share of women have much more restricted rights.
4: Most women enjoy most private property rights but a small minority does not.

5: Virtually all women enjoy all, or almost all, property rights.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is there freedom of religion?
CLARIFICATION: This indicator specifies the extent to which individuals and groups have the right to choose a religion, change their religion, and practice that religion in private or in public as well as to proselytize peacefully without being subject to restrictions by public authorities.
RESPONSES:
0: Not respected by public authorities. Hardly any freedom of religion exists. Any kind of religious practice is outlawed or at least controlled by the government to the extent that religious leaders are appointed by and subjected to public authorities, who control the activities of religious communities in some detail.
1: Weakly respected by public authorities. Some elements of autonomous organized religious practices exist and are officially recognized. But significant religious communities are repressed, prohibited, or systematically disabled, voluntary conversions are restricted, and instances of discrimination or intimidation of individuals or groups due to their religion are common.
2: Somewhat respected by public authorities. Autonomous organized religious practices exist and are officially recognized. Yet, minor religious communities are repressed, prohibited, or systematically disabled, and/or instances of discrimination or intimidation of individuals or groups due to their religion occur occasionally.
3: Mostly respected by public authorities. There are minor restrictions on the freedom of religion, predominantly limited to a few isolated cases. Minority religions face denial of registration, hindrance of foreign missionaries from entering the country, restrictions against

proselytizing, or hindrance to access to or construction of places of worship.
4: Fully respected by public authorities. The population enjoys the right to practice any religious belief they choose. Religious groups may organize, select, and train personnel; solicit and receive contributions; publish; and engage in consultations without undue interference. If religious communities have to register, public authorities do not abuse the process to discriminate against a religion and do not constrain the right to worship before registration.

QUESTION: Are public officials rigorous and impartial in the performance of their duties?
CLARIFICATION: This question focuses on the extent to which public officials generally abide by the law and treat like cases alike, or conversely, the extent to which public administration is characterized by arbitrariness and biases (*i.e.*, nepotism, cronyism, or discrimination).
The question covers the public officials that handle the cases of ordinary people. If no functioning public administration exists, the lowest score (0) applies.
RESPONSES:
0: The law is not respected by public officials. Arbitrary or biased administration of the law is rampant.
1: The law is weakly respected by public officials. Arbitrary or biased administration of the law is widespread.
2: The law is modestly respected by public officials. Arbitrary or biased administration of the law is moderate.
3: The law is mostly respected by public officials. Arbitrary or biased administration of the law is limited.
4: The law is generally fully respected by the public officials. Arbitrary or biased administration of the law is very limited.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are adult women free from servitude and other kinds of forced labor?
CLARIFICATION: Involuntary servitude occurs when an adult is unable to quit a job s/he desires to leave — not by reason of economic necessity but rather by reason of employer's coercion. This includes labor camps but not work or service which forms part of normal civic obligations such as conscription or employment in command economies.
This question does not ask you to assess the *relative* freedom of men and women from forced labor. Thus, a country in which both men and women suffer the same conditions of servitude might be coded a (0) for women, even though there is equality across the sexes.
RESPONSES:
0: Female servitude or other kinds of forced labor is widespread and accepted (perhaps even organized) by the state.
1: Female servitude or other kinds of forced labor is substantial. Although officially opposed by the public authorities, the state is unwilling or unable to effectively contain the practice.
2: Female servitude or other kinds of forced labor exists but is not widespread and usually actively opposed by public authorities, or only tolerated in some particular areas or among particular social groups.
3: Female servitude or other kinds of forced labor is infrequent and only found in the criminal underground. It is actively and sincerely opposed by the public authorities.
4: Female servitude or other kinds of forced labor is virtually non-existent.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Do all social groups, as distinguished by language, ethnicity, religion, race, region, or caste, enjoy the same level of civil liberties, or are some groups generally in a more favorable position?
CLARIFICATION: Here, civil liberties are understood to include access to justice, private

property rights, freedom of movement, and freedom from forced labor.
RESPONSES:
0: Members of some social groups enjoy much fewer civil liberties than the general population.
1: Members of some social groups enjoy substantially fewer civil liberties than the general population.
2: Members of some social groups enjoy moderately fewer civil liberties than the general population.
3: Members of some social groups enjoy slightly fewer civil liberties than the general population.
4: Members of all salient social groups enjoy the same level of civil liberties.

QUESTION: Does the state own or directly control important sectors of the economy?
CLARIFICATION: This question gauges the degree to which the state owns and controls capital (including land) in the industrial, agricultural, and service sectors.
It does *not* measure the extent of government revenue and expenditure as a share of total output; indeed, it is quite common for states with expansive fiscal policies to exercise little direct control (and virtually no ownership) over the economy.
RESPONSES:
0: Virtually all valuable capital belongs to the state or is directly controlled by the state. Private property may be officially prohibited.
1: Most valuable capital either belongs to the state or is directly controlled by the state.
2: Many sectors of the economy either belong to the state or are directly controlled by the state, but others remain relatively free of direct state control.

3: Some valuable capital either belongs to the state or is directly controlled by the state, but most remains free of direct state control.
4: Very little valuable capital belongs to the state or is directly controlled by the state.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Is there freedom from torture?
CLARIFICATION: Torture refers to the purposeful inflicting of extreme pain, whether mental or physical, with an aim to extract information or intimidate victims, who are in a state of incarceration. Here, we are concerned with torture practiced by state officials or other agents of the state (*e.g.*, police, security forces, prison guards, and paramilitary groups).
RESPONSES:
0: Not respected by public authorities. Torture is practiced systematically and is incited and approved by the leaders of government.
1: Weakly respected by public authorities. Torture is practiced frequently but is often not incited or approved by top leaders of government. At the same time, leaders of government are not actively working to prevent it.
2: Somewhat. Torture is practiced occasionally but is typically not approved by top leaders of government.
3: Mostly respected by public authorities. Torture is practiced in a few isolated cases but is not incited or approved by top government leaders.
4: Fully respected by public authorities. Torture is non-existent.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Are the laws of the land clear, well publicized, coherent (consistent with each other), relatively stable from year to year, and enforced in a predictable manner?
CLARIFICATION: This question focuses on the transparency and predictability of the laws of the land.
RESPONSES:
0: Transparency and predictability are almost non-existent. The laws of the land are created and/or enforced in completely arbitrary fashion.
1: Transparency and predictability are severely limited. The laws of the land are more often than not created and/or enforced in arbitrary fashion.
2: Transparency and predictability are somewhat limited. The laws of the land are mostly created in a non-arbitrary fashion but enforcement is rather arbitrary in some parts of the country.
3: Transparency and predictability are fairly strong. The laws of the land are usually created and enforced in a non-arbitrary fashion.
4: Transparency and predictability are very strong. The laws of the land are created and enforced in a non-arbitrary fashion.
SCALE: Ordinal, converted to interval by the measurement model.

CONVERGENCE: Model parameters with convergence issues: universal thresholds.

2.2.4 V-Dem Indicators - Exclusion

Instructions to the coders (as shown in the surveys)

Exclusion:

The following survey contains questions pertaining to exclusion. Political, economic and social well-being may depend on whether groups or individuals are excluded from positions of power, the state's protection of rights and freedoms, access to public goods and services, and opportunities to work or do business with the state.

Please bear in mind the following definitions as you respond to questions on this survey:

Exclusion is when individuals are denied access to services or participation in governed spaces based on their identity or belonging to a particular group. It is not necessary for all members of a group to be excluded in order for group-based exclusion to occur. Exclusion occurs even when only a single individual is excluded based on her or his identity or membership (perceived or actual) in a particular group.

Political groups are defined as those who are affiliated with a particular political party or candidate, or a group of parties/candidates. A common form of partisan exclusion is when state services or regulations are implemented in a way that seeks to reward the incumbent's political supporters and punish non-supporters.

Socio-Economic position defines groups based on attributes of wealth, occupation, or other economic circumstances such as owning property. Exclusion of economic groups occurs when, for example, those who are not property owners are restricted from voting, or when fees associated with justice, health or education are set at a rate that is unaffordable for poorer individuals.

Social group is differentiated within a country by caste, ethnicity, language, race, region, religion, migration status, or some combination thereof. (It does not include identities grounded in sexual orientation, gender, or socioeconomic status.) Social group identity is contextually defined and is likely to vary across countries and through time. Social group identities are also likely to cross-cut, so that a given person could be defined in multiple ways, i.e., as part of multiple groups. Nonetheless, at any given point in time there are social groups within a society that are understood - by those residing within that society - to be different, in ways that may be politically relevant. Contrast Identity group.

Geographic group refers to those living in rural or urban areas. Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer and there is access to a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road. (World Development Report, 2009: 54).

QUESTION: Is access to basic public services, such as order and security, primary education, clean water, and healthcare, distributed equally according to socioeconomic position?
CLARIFICATION: This question asks if socio-economic position is an important cleavage in society for the distribution of public services. Thus, if there are inequalities in access to public services, but these are not mainly due to differentiation between particular socio-economic position, the code should be "4" (equal). The situation could of course vary by type of public service, such that a socio-economic group is denied access to some basic public services but not others. Please base your response on whether access to most of the aforementioned services are distributed equally or unequally.
RESPONSES:
0: Extreme. Because of poverty or low income, 75 percent (percent) or more of the population lack access to basic public services of good quality.
1: Unequal. Because of poverty or low income, 25 percent (percent) or more of the population lack access to basic public services of good quality.
2: Somewhat Equal. Because of poverty or low income, 10 to 25 percent (percent) of the population lack access to basic public services of good quality.
3: Relatively Equal. Because of poverty or low income, 5 to 10 percent (percent) of the population lack access to basic public services of good quality.
4: Equal. Because of poverty or low income, less than 5 percent (percent) of the population lack access to basic public services of good quality.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

QUESTION: Is access to basic public services, such as order and security, primary education, clean water, and healthcare, distributed equally across urban and rural areas?
CLARIFICATION: Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer, there is access to a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road. (World Development Report, 2009: 54). This question asks if geographic group is an important cleavage in society for the distribution of public services. Thus, if there are inequalities in access to public services, but these are not mainly due to differentiation between urban and rural areas, the code should be "4" (equal). The situation could of course vary by type of public service, such that a geographic group is denied access to some basic public services but not others. Please base your response on whether access to most of the aforementioned services are distributed equally or unequally.
RESPONSES:
0: Extreme. Because they live in rural areas, 75 percent (percent) or more of the population lack access to basic public services of good quality.
1: Unequal. Because they live in rural areas, 25 percent (percent) or more of the population lack access to basic public services of good quality.
2: Somewhat Equal. Because they live in rural areas, 10 to 25 percent (percent) of the population lack access to basic public services of good quality.
3: Relatively Equal. Because they live in rural areas, only 5 to 10 percent (percent) of the population lack access to basic public services of good quality.
4: Equal. Because they live in rural areas, less than 5 percent (percent) of the population lack access to basic public services of good quality.
5: Rural-Bias: Because they live in urban areas, 25percent or more of the population lack access to basic public services of good quality.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are state business opportunities equally available to qualified individuals or firms regardless of gender?
CLARIFICATION: State business opportunities refer to the ability to compete for or receive a public procurement contract, to partner with the government in public-private partnerships, etc.
RESPONSES:
0: Extreme. Because of their gender, 75 percent (percent) or more of women, even if qualified, lack access to state business opportunities.
1: Unequal. Because of their gender, 25 percent (percent) or more of women, even if qualified, lack access to state business opportunities.
2: Somewhat Equal. Because of their gender, 10 to 25 percent (percent) of women, even if qualified, lack access to state business opportunities.
3: Relatively Equal. Because of their gender, 5 to 10 percent (percent) of women, even if qualified, lack access to state business opportunities.
4: Equal. Because of their gender, 5 percent (percent) of women, even if qualified, lack access to state business opportunities.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

2.2.5 V-Dem Indicators - Civil Society

Instructions to the coders (as shown in the surveys)

Civil society organization:

The following set of questions focus on civil society organizations (CSOs). These include interest groups, labor unions, religiously inspired organizations (if they are engaged in civic or political

activities), social movements, professional associations, and classic non-governmental organizations (NGOs), but *not* businesses, political parties, government agencies, or religious organizations that are primarily focused on spiritual practices. A CSO must also be at least nominally independent of government and economic institutions.

Civil society organization – Historical clarification: The following set of questions focus on civil society organizations (CSOs). These include interest groups, labor unions, religiously inspired organizations (if they are engaged in civic or political activities), social movements, professional associations, and classic non-governmental organizations (NGOs), but not businesses, political parties, government agencies, or religious organizations that are primarily focused on spiritual practices. A CSO must also be at least nominally independent of government and economic institutions.

If no CSOs exist at all for a particular time period, code the following relevant questions as giving the "lowest score" (indicating, for instance, strong repression or no consultation, a 0).

Religious organizations: In this section, we ask two questions regarding religious organizations. These may be religiously inspired civil society organizations (CSOs) or organizations whose purpose is primarily spiritual.

2.2.5.1 CSO anti-system movement character (v2csanmvch)

QUESTION: How would you characterize the anti-system movement(s) identified in the previous question?
CLARIFICATION: Check all that apply.
RESPONSES:
0: Works through legal channels, for the most part. (0=No, 1=Yes) [v2csanmvch_0]
1: Participates in elections. (0=No, 1=Yes) [v2csanmvch_1]
2: Works through a mix of legal and extra-legal channels. (0=No, 1=Yes) [v2csanmvch_2]
3: Insurrectionary. (0=No, 1=Yes) [v2csanmvch_3]
4: Democratic. Perceived by most disinterested observers as willing to play by the rules of the democratic game, willing to respect constitutional provisions or electoral outcomes, and willing to relinquish power (under democratic auspices). (0=No, 1=Yes) [v2csanmvch_4]
5: Anti-democratic. Perceived by most disinterested observers as unwilling to play by the rules of the democratic game, not willing to respect constitutional provisions or electoral outcomes, and/or not willing to relinquish power (under democratic auspices). (0=No, 1=Yes) [v2csanmvch_5]
6: Leftist, socialist, communist. (0=No, 1=Yes) [v2csanmvch_6]
7: Rightist, conservative, party of order. (0=No, 1=Yes) [v2csanmvch_7]
8: Ethnolinguistic, tribe, kinship, clan. (0=No, 1=Yes) [v2csanmvch_8]
9: Separatist or autonomist. (0=No, 1=Yes) [v2csanmvch_9]
10: Religious. (0=No, 1=Yes) [v2csanmvch_10]
11: Paramilitary. (0=No, 1=Yes) [v2csanmvch_11]
12: Heavily engaged in criminal activity, *e.g.*, narcotics, bootlegging, illegal exploitation of natural resources, extortion, kidnapping. (0=No, 1=Yes) [v2csanmvch_12]
SCALE: Mean-aggregated scores of dichotomized variable.

ANSWER-TYPE: Multiple-selection.

QUESTION: Among civil society organizations, are there anti-system opposition movements?
CLARIFICATION: An anti-system opposition movement is any movement — peaceful or armed — that is based in the country (not abroad) and is organized in opposition to the current political system. That is, it aims to change the polity in fundamental ways, *e.g.*, from democratic to autocratic (or vice-versa), from capitalist to communist (or vice-versa), from secular to fundamentalist (or vice-versa). This movement may be linked to a political party that competes in elections but it must also have a quot;movementquot; character, which is to say a mass base and an existence separate from normal electoral competition.
If there are several movements, please answer in a general way about the relationship of those movements to the regime.
RESPONSES:
0: No, or very minimal. Anti-system movements are practically nonexistent.
1: There is only a low-level of anti-system movement activity but it does not pose much of a threat to the regime.
2: There is a modest level of anti-system movement activity, posing some threat to the regime.
3: There is a high level of anti-system movement activity, posing substantial threat to the regime.
4: There is a very high level of anti-system movement activity, posing a real and present threat to the regime.
ORDERING: If coded quot;0quot;, skip the following questions focused on anti-system movements.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are major civil society organizations (CSOs) routinely consulted by policymakers on policies relevant to their members?
RESPONSES:
0: No. There is a high degree of insulation of the government from CSO input. The government may sometimes enlist or mobilize CSOs after policies are adopted to sell them to the public at large. But it does not often consult with them in formulating policies.
1: To some degree. CSOs are but one set of voices that policymakers sometimes take into account.
2: Yes. Important CSOs are recognized as stakeholders in important policy areas and given voice on such issues. This can be accomplished through formal corporatist arrangements or through less formal arrangements.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the government achieve control over entry and exit by civil society organizations (CSOs) into public life?
RESPONSES:
0: Monopolistic control. The government exercises an explicit monopoly over CSOs. The only organizations allowed to engage in political activity such as endorsing parties or politicians, sponsoring public issues forums, organizing rallies or demonstrations, engaging in strikes, or publicly commenting on public officials and policies are government-sponsored organizations. The government actively represses those who attempt to defy its monopoly on political activity.
1: Substantial control. The government licenses all CSOs and uses political criteria to bar organizations that are likely to oppose the government. There are at least some citizen-based organizations that play a limited role in politics independent of the government. The government actively represses those who attempt to flout its political criteria and bars them from any political activity.
2: Moderate control. Whether the government ban on independent CSOs is partial or full, some prohibited organizations manage to play an active political role. Despite its ban on organizations of this sort, the government does not or cannot repress them, due to either its weakness or political expedience.
3: Minimal control. Whether or not the government licenses CSOs, there exist constitutional provisions that allow the government to ban organizations or movements that have a history of anti-democratic action in the past (*e.g.* the banning of neo-fascist or communist organizations in the Federal Republic of Germany). Such banning takes place under strict rule of law and conditions of judicial independence.
4: Unconstrained. Whether or not the government licenses CSOs, the government does not impede their formation and operation unless they are engaged in activities to violently overthrow the government.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr

QUESTION: Does the government attempt to repress civil society organizations (CSOs)?
RESPONSES:
0: Severely. The government violently and actively pursues all real and even some imagined members of CSOs. They seek not only to deter the activity of such groups but to effectively liquidate them. Examples include Stalinist Russia, Nazi Germany, and Maoist China.
1: Substantially. In addition to the kinds of harassment outlined in responses 2 and 3 below, the government also arrests, tries, and imprisons leaders of and participants in oppositional CSOs who have acted lawfully. Other sanctions include disruption of public gatherings and violent sanctions of activists (beatings, threats to families, destruction of valuable property). Examples include Mugabe's Zimbabwe, Poland under Martial Law, Serbia under Milosevic.
2: Moderately. In addition to material sanctions outlined in response 3 below, the government also engages in minor legal harassment (detentions, short-term incarceration) to dissuade CSOs from acting or expressing themselves. The government may also restrict the scope of their actions through measures that restrict association of civil society organizations with each other or political parties, bar civil society organizations from taking certain actions, or block international contacts. Examples include post-Martial Law Poland, Brazil in the early 1980s, the late Franco period in Spain.
3: Weakly. The government uses material sanctions (fines, firings, denial of social services) to deter oppositional CSOs from acting or expressing themselves. They may also use burdensome registration or incorporation procedures to slow the formation of new civil society organizations and sidetrack them from engagement. The government may also organize Government Organized Movements or NGOs (GONGOs) to crowd out independent organizations. One example would be Singapore in the post-Yew phase or Putin's Russia.
4: No. Civil society organizations are free to organize, associate, strike, express themselves, and to criticize the government without fear of government sanctions or harassment.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: For reasons of consistency, as of December 2014, responses to this question are reversed so that the least democratic response is "0" and the most democratic is "4".

QUESTION: Does the government attempt to repress religious organizations?
RESPONSES:
0: Severely. The government violently and actively pursues all real and even some imagined members of religious organizations. It seeks not only to deter the activity of such groups but also to effectively liquidate them. Examples include Stalinist Russia and Maoist China.
1: Substantially. In addition to the kinds of harassment outlined in 2 and 3 below, the government also arrests, tries, and imprisons leaders of and participants in oppositional

religious organizations who have acted lawfully. Other sanctions include disruption of public gatherings and violent sanctions of activists (beatings, threats to families, destruction of valuable property).
2: Moderately. In addition to material sanctions outlined in 3 below, the government also engages in minor legal harassment (detentions, short-term incarceration) to dissuade religious organizations from acting or expressing themselves. The government may also restrict the scope of their actions through measures that restrict association of religious civil society organizations with each other or political parties, bar religious civil society organizations from taking certain actions, or block international contacts.
3: Weakly. The government uses material sanctions (fines, firings, denial of social services) to deter oppositional religious organizations from acting or expressing themselves. They may also use burdensome registration or incorporation procedures to slow the formation of new religious civil society organizations and sidetrack them from engagement. The government may also organize parallel religious organizations to crowd out independent religious organizations.
4: No. Religious civil society organizations are free to organize, associate, strike, express themselves, and to criticize the government without fear of government sanctions or harassment.
SCALE: Ordinal, converted to interval by the measurement model.

PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_nr
QUESTION: Civil societies inevitably involve a mix of larger and smaller organizations. Please characterize the relative influence of large mass constituency civil society organizations (CSOs) versus smaller, more local, or narrowly construed CSOs.
RESPONSES:
0: The state does not allow autonomous CSOs. (0=No, 1=Yes) [v2csstruc_0]
1: Large encompassing organizations dominate. The government and CSOs are linked formally through a corporatist system of interest intermediation; or, due to historical circumstances, particular large CSOs are highly influential. The voice of such organizations is recognized by the government and is accorded special weight by policymakers. (0=No, 1=Yes) [v2csstruc_1]

2: Neither large encompassing nor small CSOs dominate. Influence is contingent on circumstances. Organizations, both large and small, contend with one another to have their voice considered by policymakers. (0=No, 1=Yes) [v2csstruc_2]
3: Small CSOs dominate. Many small organizations contend with one another to have their voices heard by policymakers. (0=No, 1=Yes) [v2csstruc_3]
SCALE: Mean-aggregated scores of dichotomized variable.

2.2.6 V-Dem Indicators - Deliberation

Instructions to the coders (as shown in the surveys)

Deliberation:

The following questions address the deliberative or non-deliberative nature of a country's politics, with particular focus on elite levels. Some of these questions focus on the quality of discourse and others focus on public policies.

2.2.6.1 Common good (v2dlcommon)

Long tag: vdem_coder_level_v2dlcommon

Original tag: v2dlcommon

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: When important policy changes are being considered, to what extent do political elites justify their positions in terms of the common good?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: Little or no justification in terms of the common good is usually offered.
1: Specific business, geographic, group, party, or constituency interests are for the most part offered as justifications.
2: Justifications are for the most part a mix of specific interests and the common good and it is impossible to say which justification is more common than the other.
3: Justifications are based on a mixture of references to constituency/party/group interests

and on appeals to the common good.
4: Justifications are for the most part almost always based on explicit statements of the common good for society, understood either as the greatest good for the greatest number or as helping the least advantaged in a society.

QUESTION: When important policy changes are being considered, how wide is the range of consultation at *elite levels*?
CLARIFICATION: Because practices vary greatly from policy to policy, base your answer on the style that is most typical of policymaking.
RESPONSES:
0: No consultation. The leader or a very small group (*e.g.* military council) makes authoritative decisions on their own.
1: Very little and narrow. Consultation with only a narrow circle of loyal party/ruling elites.
2: Consultation includes the former plus a larger group that is loyal to the government, such as the ruling party's or parties' local executives and/or women, youth and other branches.
3: Consultation includes the former plus leaders of other parties.
4: Consultation includes the former plus a select range of society/labor/business representatives.
5: Consultation engages elites from essentially all parts of the political spectrum and all politically relevant sectors of society and business.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: When important policy changes are being considered, to what extent do political elites acknowledge and respect counterarguments?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: Counterarguments are not allowed or if articulated, punished.
1: Counterarguments are allowed at least from some parties, but almost always are ignored.
2: Elites tend to acknowledge counterarguments but then explicitly degrade them by making a negative statement about them or the individuals and groups that propose them.
3: Elites tend to acknowledge counterarguments without making explicit negative or positive statements about them.
4: Elites almost always acknowledge counterarguments and explicitly value them, even if they ultimately reject them for the most part.
5: Elites almost always acknowledge counterarguments and explicitly value them, and frequently also even accept them and change their position.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Considering the profile of social and infrastructural spending in the national budget, how quot;particularisticquot; or quot;public goodsquot; are most expenditures?
CLARIFICATION: Particularistic spending is narrowly targeted on a specific corporation, sector, social group, region, party, or set of constituents. Such spending may be referred to as quot;porkquot;, quot;clientelisticquot;, or quot;private goods.quot;
Public-goods spending is intended to benefit all communities within a society, though it may be means-tested so as to target poor, needy, or otherwise underprivileged constituents. The key point is that all who satisfy the means-test are allowed to receive the benefit.
Your answer should consider the entire budget of social and infrastructural spending. We are interested in the relative value of particularistic and public-goods spending, not the number of bills or programs that fall into either category.
RESPONSES:
0: Almost all of the social and infrastructure expenditures are particularistic.
1: Most social and infrastructure expenditures are particularistic, but a significant portion (*e.g.* 1/4 or 1/3) is public-goods.
2: Social and infrastructure expenditures are evenly divided between particularistic and public-goods programs.
3: Most social and infrastructure expenditures are public-goods but a significant portion (*e.g.*, 1/4 or 1/3) is particularistic.
4: Almost all social and infrastructure expenditures are public-goods in character. Only a small portion is particularistic.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: When important policy changes are being considered, how wide and how independent are public deliberations?
CLARIFICATION: This question refers to deliberation as manifested in discussion, debate, and other public forums such as popular media.
RESPONSES:
0: Public deliberation is never, or almost never allowed.
1: Some limited public deliberations are allowed but the public below the elite levels is almost always either unaware of major policy debates or unable to take part in them.
2: Public deliberation is not repressed but nevertheless infrequent and non-elite actors are typically controlled and/or constrained by the elites.
3: Public deliberation is actively encouraged and some autonomous non-elite groups participate, but it is confined to a small slice of specialized groups that tends to be the same across issue-areas.
4: Public deliberation is actively encouraged and a relatively broad segment of non-elite groups often participate and vary with different issue-areas.
5: Large numbers of non-elite groups as well as ordinary people tend to discuss major policies among themselves, in the media, in associations or neighborhoods, or in the streets. Grass-roots deliberation is common and unconstrained.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When important policy changes are being considered, *i.e.* before a decision has been made, to what extent do political elites give public and reasoned justifications for their positions?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: No justification. Elites almost always only dictate that something should or should not be done, but no reasoning about justification is given. For example, quot;We must cut spending.quot;
1: Inferior justification. Elites tend to give reasons why someone should or should not be for doing or not doing something, but the reasons tend to be illogical or false, although they may appeal to many voters. For example, quot;We must cut spending. The state is inefficient.quot; [The inference is incomplete because addressing inefficiencies would not necessarily reduce spending and it might undermine essential services.]
2: Qualified justification. Elites tend to offer a single simple reason justifying why the proposed policies contribute to or detract from an outcome. For example, quot;We must cut spending because taxpayers cannot afford to pay for current programs.quot;
3: Sophisticated justification. Elites tend to offer more than one or more complex, nuanced and complete justification. For example, quot;We must cut spending because taxpayers cannot afford to pay for current government programs. Raising taxes would hurt economic growth, and deficit spending would lead to inflation.quot;
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: How many welfare programs are means-tested and how many benefit all (or virtually all) members of the polity?
CLARIFICATION: A means-tested program targets poor, needy, or otherwise underprivileged constituents. Cash-transfer programs are normally means-tested.
A universal (non-means tested) program potentially benefits everyone. This includes free education, national health care schemes, and retirement programs. Granted, some may benefit more than others from these programs (*e.g.*, when people with higher salaries get higher unemployment benefits). The key point is that practically everyone is a beneficiary, or potential beneficiary.
The purpose of this question is not to gauge the size of the welfare state but rather its quality. So, your answer should be based on whatever programs exist.
RESPONSES:
0: There are no, or extremely limited, welfare state policies (education, health, retirement, unemployment, poverty programs).
1: Almost all of the welfare state policies are means-tested.
2: Most welfare state policies means-tested, but a significant portion (*e.g.* 1/4 or 1/3) is universalistic and potentially benefits everyone in the population.
3: The welfare state policies are roughly evenly divided between means-tested and universalistic.
4: Most welfare state policies are universalistic, but a significant portion (*e.g.*, 1/4 or 1/3) are means-tested.
5: Almost all welfare state policies are universal in character. Only a small portion is means-tested.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Pemstein et al. YEARS: 1900-2025

2.2.7 V-Dem Indicators - Elections

Instructions to the coders (as shown in the surveys) Elections: Among national elections we distinguish elections to: (i) the lower or unicameral chamber of the legislature (including constituent or constitutional assemblies), (ii) the upper chamber of the legislature, and (iii) the presidency. For present purposes an executive who is elected by a legislature is considered a *prime minister*, not a president. In order to be considered a *president*, an executive must, under ordinary circumstances, be chosen directly by the electorate (perhaps mediated by an electoral

college).

Non-election specific coding: The following questions are not election-specific and should be coded for every year from 1900 (or when applicable) to the present.

Election specific questions: The following questions pertain to specific national elections. The date of each election is pre-coded. In cases where more than one election is held on the same day(s), the questions in this section are for all elections taking place on that date. If you have coded for V-Dem in the past, your previous scores will be displayed in the survey. You are welcome to revise previously submitted scores in all surveys. For this section, we kindly ask you make sure that you have coded all election years.

Election specific questions – Historical clarification: The following questions pertain to specific national elections. National elections include elections to the presidency (if applicable) and legislature (lower and upper house, whatever applies), whether direct or indirect, as well as constituent assembly elections. It does not include other elections, *e.g.*, subnational elections, plebiscites, initiatives, referendums, or by-elections. The date of each election is pre-coded. In cases where more than one election is held on the same day(s), the questions in this section are for all elections taking place on that date."

Subnational elections and offices: This section of the survey asks a small number of questions about *subnational* elections and offices. You will be instructed to identify two subnational levels, referred to as "regional government" and "local government". Questions in this section should be answered for every year, rather than for specific elections.

Lower chamber election: The following questions pertain to specific lower chamber or unicameral legislative elections. The dates of these elections have been pre-coded.

Executive and legislative versions of Election specific variables

- In order to subset election specific variables for executive elections only (previously *_ex) – keep only those observations where v2xel_elecpres is 1.
- In order to subset election specific variables for legislative elections only (previously *_leg) – keep only those observations where v2xel_elecparl is 1.

2.2.7.1 Election losers accept results (v2elaccept)

Long tag: vdem_coder_level_v2elaccept

Original tag: v2elaccept

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Did losing parties and candidates accept the result of this national election within three months?
RESPONSES:
0: None. None of the losing parties or candidates accepted the results the election, or all opposition was banned.

1: A few. Some but not all losing parties or candidates accepted the results but those who constituted the main opposition force did not.
2: Some. Some but not all opposition parties or candidates accepted the results but it is unclear whether they constituted a major opposition force or were relatively insignificant.
3: Most. Many but not all opposition parties or candidates accepted the results and those who did not had little electoral support.
4: All. All parties and candidates accepted the results.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Mean

VARIABLE TYPE: C
PROJECT MANAGER(S): Staffan I. Lindberg
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Following this national election, did winners assume office according to prescribed constitutional rules and norms?
RESPONSES:
0: No. The official winner of the election was prevented from assuming office by *unconstitutional* means.
1: Partially. The official winner/winning party or largest vote-getter was forced at least in part by unconstitutional means to share power, or delay assuming power for more than 6 months.
2: Yes. Constitutional rules and norms were followed and the official winner/winning party or largest vote-getter assumed office accordingly (or continued in office).
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: The question text between contemporary and historical differ in inclusion of quot;within 12 months of the electionquot;. In contemporary it is excluded while included in historical.
DATA RELEASE: 1-16.

QUESTION: Does the Election Management Body (EMB) have autonomy from government to apply election laws and administrative rules impartially in national elections?
CLARIFICATION: The EMB refers to whatever body (or bodies) is charged with administering national elections.
RESPONSES:
0: No. The EMB is controlled by the incumbent government, the military, or other *de facto* ruling body.
1: Somewhat. The EMB has some autonomy on some issues but on critical issues that influence the outcome of elections, the EMB is partial to the *de facto* ruling body.
2: Ambiguous. The EMB has some autonomy but is also partial, and it is unclear to what extent this influences the outcome of the election.
3: Almost. The EMB has autonomy and acts impartially almost all the time. It may be influenced by the *de facto* ruling body in some minor ways that do not influence the outcome of elections.
4: Yes. The EMB is autonomous and impartially applies elections laws and administrative rules.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Does the Election Management Body (EMB) have sufficient staff and resources to administer a well-run national election?
CLARIFICATION: The EMB refers to whatever body (or bodies) is charged with administering national elections.
RESPONSES:
0: No. There are glaring deficits in staff, financial, or other resources affecting the organization across the territory.
1: Not really. Deficits are not glaring but they nonetheless seriously compromised the organization of administratively well-run elections in many parts of the country.
2: Ambiguous. There might be serious deficiencies compromising the organization of the election but it could also be a product of human errors and co-incidence or other factors outside the control of the EMB.
3: Mostly. There are partial deficits in resources but these are neither serious nor widespread.
4: Yes. The EMB has adequate staff and other resources to administer a well-run election.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr

QUESTION: Taking all aspects of the pre-election period, election day, and the post-election process into account, would you consider subnational elections (regional and local, as previously identified) to be free and fair on average?
CLARIFICATION: This question refers to subnational levels that have elected offices and elections. It does not refer to subnational levels without elected offices and elections. If there were no subnational elections in any of the years covered in this survey, choose option 5.
quot;Free and fairquot; refers to all aspects of the election process *except* the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (we measure that issue separately).
RESPONSES:
0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (who won office).
1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the elections (who won office).
2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome or not (who won office).
3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularities but these did not in the end affect the outcome (who won office).
4: Yes. There was some amount of human error and logistical restrictions but these were largely unintentional and without significant consequences.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;5quot; is recoded as a separate variable (v2elffelrbin).
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v2elffelrbin_ord.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are subnational elections held?
RESPONSES:
0: No.
1: Yes.
SCALE: Dichotomous, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;5quot; from variable v2elffelr is recoded as a separate variable (v2elffelrbin). If a coder chose the 5th category in the original question, it receives 0 in the new quot;v2elffelrbinquot; variable (corresponding to the answer, no, there were no subnational elections); otherwise it receives 1 (yes, there are subnational elections held). The resulting series of 0-1 country-coder time-series is run in the measurement model, which calculates the final value of v2elffelrbin while taking into account background coder characteristics.
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Last
CITATION: Pemstein et al. QUESTION: Taking all aspects of the pre-election period, election day, and the post-election process into account, would you consider this national election to be free and fair?
CLARIFICATION: The only thing that should *not* be considered in coding this is the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (an issue measured separately).
RESPONSES:
0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (*i.e.*, who became president; or who won the legislative majority).
1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the election (*i.e.*, who became president; or who won the legislative majority).
2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome or not (as defined above).
3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularities but these did not in the end affect the outcome (as defined above).
4: Yes. There was some amount of human error and logistical restrictions but these were largely unintentional and without significant consequences.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: In this national election, were opposition candidates/parties/campaign workers subjected to repression, intimidation, violence, or harassment by the government, the ruling party, or their agents?
CLARIFICATION: Other types of clearly distinguishable civil violence, even if politically motivated, during the election period should *not* be factored in when scoring this indicator (it is dealt with separately).
RESPONSES:
0: Yes. The repression and intimidation by the government or its agents was so strong that the entire period was quiet.
1: Yes, frequent: There was systematic, frequent and violent harassment and intimidation of the opposition by the government or its agents during the election period.
2: Yes, some. There was periodic, not systematic, but possibly centrally coordinated — harassment and intimidation of the opposition by the government or its agents.
3: Restrained. There were sporadic instances of violent harassment and intimidation by the government or its agents, in at least one part of the country, and directed at only one or two local branches of opposition groups.
4: None. There was no harassment or intimidation of opposition by the government or its agents, during the election campaign period and polling day.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: In this national election, was there evidence of other intentional irregularities by incumbent and/or opposition parties, and/or vote fraud?
CLARIFICATION: Examples include use of double IDs, intentional lack of voting materials, ballot-stuffing, misreporting of votes, and false collation of votes. This question does not refer to lack of access to registration, harassment of opposition parties, manipulations of the voter registry or vote-buying (dealt with in previous questions).
RESPONSES:
0: Yes. There were systematic and almost nationwide other irregularities.
1: Yes, some. There were non-systematic, but rather common other irregularities, even if only in some parts of the country.
2: Sporadic. There were a limited number of sporadic other irregularities, and it is not clear whether they were intentional or disfavored particular groups.
3: Almost none. There were only a limited number of irregularities, and many were probably unintentional or did not disfavor particular groups' access to participation.
4: None. There was no evidence of intentional other irregularities. Unintentional irregularities resulting from human error and/or natural conditions may still have occurred.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How would you characterize the relative power, in practice, of elected and non-elected offices at the local level?
CLARIFICATION: We are concerned with the relative power of local offices to *each other*, not the power of local offices relative to higher levels of government.
Please consider only major offices, such as the executive, assembly, and judiciary, *not* those of minor bureaucrats. (A body of government officials, such as an assembly or judiciary, counts as one office.)
An office is "subordinate" if its officeholders can be chosen and removed by another office or if its decisions can be blocked or modified by another office, but it cannot similarly constrain the other office.
RESPONSES:
0: All or nearly all elected offices are subordinate to non-elected offices at the local level.
1: Some elected offices are subordinate to non-elected offices at the local level.
2: Elected and non-elected offices are approximately equal in power at the local level.
3: Most non-elected offices are subordinate to elected offices at the local level.
4: All or nearly all non-elected offices are subordinate to elected offices at the local level.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Was this national election multiparty?
RESPONSES:
0: No. No-party or single-party and there is no meaningful competition (includes situations where a few parties are legal but they are all *de facto* controlled by the dominant party).
1: Not really. No-party or single-party (defined as above) but multiple candidates from the same party and/or independents contest legislative seats or the presidency.
2: Constrained. At least one real opposition party is allowed to contest but competition is highly constrained — legally or informally.
3: Almost. Elections are multiparty in principle but either one main opposition party is prevented (*de jure* or *de facto*) from contesting, or conditions such as civil unrest (excluding natural disasters) prevent competition in a portion of the territory.
4: Yes. Elections are multiparty, even though a few marginal parties may not be permitted to contest (*e.g.* far-right/left extremist parties, anti-democratic religious or ethnic parties).
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, was the campaign period, election day, and post-election process free from other types not by the government, the ruling party, or their agents) of violence related to the conduct of the election and the campaigns (but not conducted by the government and its agents)?
RESPONSES:
0: No. There was widespread violence between civilians occurring throughout the election period, or in an intense period of more than a week and in large swaths of the country. It resulted in a large number of deaths or displaced refugees.
1: Not really. There were significant levels of violence but not throughout the election period or beyond limited parts of the country. A few people may have died as a result, and some people may have been forced to move temporarily.
2: Somewhat. There were some outbursts of limited violence for a day or two, and only in a small part of the country. The number of injured and otherwise affected was relatively small.
3: Almost. There were only a few instances of isolated violent acts, involving only a few people; no one died and very few were injured.
4: Peaceful. No election-related violence between civilians occurred.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is significant public financing available for parties' and/or candidates' campaigns for national office?
RESPONSES:
0: No. Public financing is not available.
1: Little. There is public financing but it is so small or so restricted that it plays a minor role in most parties' campaigns.
2: Ambiguous. There is some public financing available but it is unclear whether it plays a significant role for parties.
3: Partly. Public financing plays a significant role in the campaigns of many parties.
4: Yes. Public financing funds a significant share of expenditures by all, or nearly all parties.

QUESTION: How would you characterize the relative power, in practice, of elected and non-elected offices at the regional level?
CLARIFICATION: We are concerned with the relative power of regional offices to each other, *not* the power of regional offices relative to higher or lower levels of government.
Please consider only major offices, such as the executive, assembly, and judiciary, *not* those of minor bureaucrats. (A body of government officials, such as an assembly or judiciary, counts as one office.)
An office is "subordinate" if its officeholders can be chosen and removed by another office or if its decisions can be blocked or modified by another office, but it cannot similarly constrain the other office.
RESPONSES:
0: All or nearly all elected offices are subordinate to non-elected offices at the regional level.
1: Some elected offices are subordinate to non-elected offices at the regional level.
2: Elected and non-elected offices are approximately equal in power at the regional level.
3: Most non-elected offices are subordinate to elected offices at the regional level.
4: All or nearly all non-elected offices are subordinate to elected offices at the regional level.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, was there a reasonably accurate voter registry in place and was it used?
RESPONSES:
0: No. There was no registry, or the registry was not used.
1: No. There was a registry but it was fundamentally flawed (meaning 20percent or more of eligible voters could have been disenfranchised or the outcome could have been affected significantly by double-voting and impersonation).
2: Uncertain. There was a registry but it is unclear whether potential flaws in the registry had much impact on electoral outcomes.
3: Yes, somewhat. The registry was imperfect but less than 10percent of eligible voters may have been disenfranchised, and double-voting and impersonation could not have affected the results significantly.
4: Yes. The voter registry was reasonably accurate (less than 1percent of voters were affected by any flaws) and it was applied in a reasonable fashion.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, was there evidence of vote and/or turnout buying?

CLARIFICATION: Vote and turnout buying refers to the distribution of money or gifts to individuals, families, or small groups in order to influence their decision to vote/not vote or whom to vote for. It does not include legislation targeted at specific constituencies, i.e. quot;porkbarrelquot; legislation.
RESPONSES:
0: Yes. There was systematic, widespread, and almost nationwide vote/turnout buying by almost all parties and candidates.
1: Yes, some. There were non-systematic but rather common vote-buying efforts, even if only in some parts of the country or by one or a few parties.
2: Restricted. Money and/or personal gifts were distributed by parties or candidates but these offerings were more about meeting an 'entry-ticket' expectation and less about actual vote choice or turnout, even if a smaller number of individuals may also be persuaded.
3: Almost none. There was limited use of money and personal gifts, or these attempts were limited to a few small areas of the country. In all, they probably affected less than a few percent of voters.
4: None. There was no evidence of vote/turnout buying.
SCALE: Ordinal, converted to interval by the measurement model.

YEARS: 1789-2025

2.2.8 V-Dem Indicators - The Executive

Instructions to the coders (as shown in the surveys)

Executive:

In this section, we distinguish between the head of state (HOS) and the head of government (HOG). The *head of state* is an individual or collective body that serves as the chief public representative of the country. Sometimes this is a largely ceremonial role, *e.g.* a monarch who reigns but does not rule, or a president whose powers are strictly circumscribed. The *head of government* is the chief officer(s) of the executive branch of government, typically presiding over a cabinet. In a parliamentary system, this is usually the prime minister. In a presidential system, this is usually the president, who then serves as both, head of state and head of government. In a typical semi-presidential system, the president serves as head of state and the prime minister serves as head of government.

These definitions are grounded in the *functions* that each office performs, as described above. Titles can be confusing. Do not assume, for example, that simply because an individual holds the title of "president" s/he is serving as the chief public representative of the country. Likewise, it may be that the *effective* head of state/head of government is someone other than the *official* head of state/head of government. In this instance, the following questions apply to the person who effectively wields this power. In some socialist systems, for example, the official head of state was a person within the state bureaucracy, but in practice the chief public representative of the country was the chairman of the communist party. It is the latter who is the "effective" head of state, and hence should be the focus of your answers. The same applies if the head of state/head of government is so old, sick or perhaps mentally disabled that s/he cannot perform his/her functions, which are instead performed by someone else. It is the latter person who is the effective head of state/head of government.

If you are considering a semi sovereign territory, such as a colony, an annexed territory or a member of the British Commonwealth, please answer the following questions with respect to the head of state and (if separate) the head of government who is located in the territory in question. Thus, in a typical British colony the governor-general—not the King/Queen of England—would be understood as the

head of state. Likewise, in a British colony the local prime minister in the colony—not the prime minister in London—would be understood as the head of government.

In order to mitigate potential misunderstandings, the identities of the head of state and head of government for each country have been pre-coded for as many years as possible. Thus, when conducting your coding make sure to pay close attention to the names of these individuals, which you can see by clicking on the year grid for a particular year in the first question of this section, "HOS name." This is your key to what we mean by "head of state" or "head of government."

Note also that when the two functions are fused in the same office, we ask you to code only the head of state section of the survey. Any precoded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the precoded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives. If you feel strongly that the precoded information is wrong, please rate your confidence in the preloaded information and then consult your V-Dem contact. You will have to rate confidence in all the available years in order to proceed to the next question.

In order to avoid spending time on short-lived executives, we have included only executives who held office for at least 100 days.

QUESTION: How routinely do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, grant favors in exchange for bribes, kickbacks, or other material inducements?
RESPONSES:
0: It is routine and expected.
1: It happens more often than not in dealings with the executive.
2: It happens but is unpredictable: those dealing with the executive find it hard to predict when an inducement will be necessary.
3: It happens occasionally but is not expected.
4: It never, or hardly ever, happens.
SCALE: Ordinal, converted to interval by the measurement model.

PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How routinely do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements?
CLARIFICATION: When responding to this question, we would like to you think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response.
RESPONSES:
0: Extremely common. Most public sector employees are systematically involved in petty but corrupt exchanges almost all the time.
1: Common. Such petty but corrupt exchanges occur regularly involving a majority of public employees.
2: Sometimes. About half or less than half of public sector employees engage in such exchanges for petty gains at times.
3: Scattered. A small minority of public sector employees engage in petty corruption from time to time.
4: No. Never, or hardly ever.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In practice, does the head of state have the power to appoint — or is the

approval of the head of state necessary for the appointment of — cabinet ministers?
CLARIFICATION: The question refers to whether the head of state is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. If confirmation of the legislature is needed, this should be coded as such also when the HOS controls the majority of the legislature (quot;tacit consentquot;). Moreover, by the quot;legislaturequot; in this case, we mean either house of the legislature (in the case of bicameralism).
RESPONSES:
0: No.
1: Yes, but only with respect to the head of the cabinet, and only with the tacit consent or explicit confirmation by the legislature.
2: Yes, but only with the tacit consent or explicit confirmation by the legislature.
3: Yes, without any need for confirmation by the legislature, but only with respect to the head of the cabinet.
4: Yes, without any need for confirmation by the legislature.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Does the head of state have the capacity, in practice, to propose legislation?
CLARIFICATION: By "propose legislation", we mean the introduction of legislative bills. The question refers to whether the head of state is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not.
RESPONSES:
0: Yes, in all policy areas, including some exclusive domains (where neither the legislature nor other bodies may initiate bills).
1: Yes, in all policy areas, but this power is shared with the legislature and perhaps with other bodies.
2: No. The head of state cannot propose legislation.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: If the head of government took actions to veto a piece of legislation, would he/she be likely to succeed?
CLARIFICATION: By "veto", we mean either a partial veto (concerning any parts of a bill) or package vetoes (concerning whole bills) of bills that have already been passed by the legislature. The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not.
RESPONSES:
0: No.
1: Yes, but the legislature can override the veto by a simple majority vote (a vote of more than half of those voting).
2: Yes, but the legislature can override the veto by an absolute majority vote (a vote of more than half of the members of the legislature).
3: Yes, but the legislature can override the veto by a qualified/extraordinary majority vote (a super-majority — *e.g.*, 2/3 or 3/4 — of those voting).
4: Yes, with no possibility of override.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In practice, does the head of government have the power to appoint — or is the approval of the head of government necessary for the appointment of — cabinet ministers?
CLARIFICATION: The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. If confirmation of the legislature is needed, this should be coded as such also when the HOG controls the majority of the legislature (quot;tacit consentquot;). Moreover, by the quot;legislaturequot; in this case, we mean either house of

the legislature (in the case of bicameralism).
RESPONSES:
0: No.
1: Yes, but only with the tacit consent or explicit confirmation by the legislature.
2: Yes, without any need for confirmation by the legislature.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: If the head of government took actions to dissolve the legislature, would he/she be likely to succeed?
CLARIFICATION: The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. By quot;dissolving the legislaturequot; we refer to the ability of the head of government to call a new election for the legislature.
RESPONSES:
0: No.
1: Yes, but not at his/her own discretion, only when prompted to as a response to specific events (for example, after a certain number of votes of no confidence, or after a certain number of failed attempts to form a cabinet).
2: Yes, at his/her own discretion, but with restrictions (for example, by frequency, such as "once a year", by time point within term, such as "not within the last sixth months of the head of government's term", and by the requirement that the head of government must then himself/herself stand for election).
3: Yes, at his/her own discretion and without restrictions.

SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: How often do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, steal, embezzle, or misappropriate public funds or other state resources for personal or family use?
RESPONSES:
0: Constantly. Members of the executive act as though all public resources were their personal or family property.
1: Often. Members of the executive are responsible stewards of selected public resources but treat the rest like personal property.
2: About half the time. Members of the executive are about as likely to be responsible stewards of selected public resources as they are to treat them like personal property.
3: Occasionally. Members of the executive are responsible stewards of most public resources but treat selected others like personal property.
4: Never, or hardly ever. Members of the executive are almost always responsible stewards of public resources and keep them separate from personal or family property.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: How often do public sector employees steal, embezzle, or misappropriate public funds or other state resources for personal or family use?
CLARIFICATION: When responding to this question, we would like you to think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response.
RESPONSES:
0: Constantly. Public sector employees act as though all public resources were their personal or family property.
1: Often. Public sector employees are responsible stewards of selected public resources but treat the rest like personal property.
2: About half the time. Public sector employees are about as likely to be responsible stewards of selected public resources as they are to treat them like personal property.
3: Occasionally. Public sector employees are responsible stewards of most public resources but treat selected others like personal property.
4: Never, or hardly ever. Public sector employees are almost always responsible stewards of public resources and keep them separate from personal or family property.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (one) group has the strongest anti-regime preferences/antipathy against the current regime, irrespective of the group's resources and capabilities for affecting the regime's hold on power?
CLARIFICATION: Consider only the anti-regime preferences of the actors in this group, and do not take into consideration the abilities of this group to actually affect regime survival and change. Hence, the group with the strongest anti-regime preferences need not be the most important opposition group. Both capable and incapable political actors may have strong anti-regime preferences and want to see the regime removed from power. We also remind that the group needs not be currently mobilized or explicitly engaged in high-level opposition activities to be counted; individuals may strongly resent a regime, without taking particular actions, in a given year.
One way to think about what pro-/anti-regime preferences mean, independently of ability to affect regime survival is: what would individuals hypothetically (honestly) answer if asked in a survey: "On a scale from 0-10, how pleased are you with the current political regime".
We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.
5: The military.
6: An ethnic or racial group(s).
7: A religious group(s).

8: Local elites, including chiefs.
9: Urban working classes, including labor unions.
10: Urban middle classes
11: Rural working classes (e.g., peasants).
12: Rural middle classes (e.g., family farmers)
13: A foreign government or colonial power.

ADDITIONAL VERSIONS: *_nr
QUESTION: Which (one) group constitutes the greatest threat to the current regime?
CLARIFICATION: Choose the one group (among those you registered as opposition groups under the v2regoppgroups question) that is the most dangerous threat to the regime in a given year. That is, the group that could most strongly increase the chance that the regime loses power. The importance/danger associated with an opposition group will be affected both by its level of hostility towards the regime and its power resources/how capable it is of removing the regime should it try to do so. We remind you that groups need not be actively mobilized or explicitly engaged in high-level opposition activities to be counted; key opposition groups may include actors who oppose the regime and constitute a dormant threat to the regime, even though they do not take particular actions in a given year.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.

ADDITIONAL VERSIONS: *_nr
QUESTION: Which groups include noteworthy opposition actors – that is, individuals (mobilized or not) who both want to and who could, under favorable circumstances, be able to remove the existing political regime? (Check all that apply.)
CLARIFICATION: Consider which group(s) include a significant share of individuals who both oppose the regime and pose a non-negligible threat to the regime (either mobilized or dormant). In other words, these individuals must both want to see the regime removed and, at least under hypothetical "favorable conditions", be capable of removing the regime. Groups need not be actively mobilized or explicitly engaged in high-level opposition activities to be counted; opposition groups also include individuals who oppose the regime without taking particular actions, at the moment. We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. VARIABLE TYPE: C
PROJECT MANAGER(S): Sirianne Dahlum, Tore Wig
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (if any) groups include a significant share of individuals who explicitly and actively mobilize against the regime in a particular year? (Check all that apply.)
CLARIFICATION: Consider which group(s) include a significant share of individuals who engage in active and explicit opposition to the regime to promote its removal. These actors make explicit statements of dissent from the regime, publicly voice their preference for regime change, and may possibly engage in other actions intended to further the removal of the regime such as anti-regime demonstrations, sit-ins, boycotts, strikes, the formation of anti-system parties, acts of sabotage, or armed rebellion.
Please note that only years when anti-regime speech or activity occurs should be coded. In years when groups probably oppose the regime, but are not engaged in any explicit acts of opposition, the group should not be selected. We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In total, how large is the share of the domestic adult (18+) population that are noteworthy opposition actors to the current political regime?
CLARIFICATION: Consider the sum total of all the groups (excepting foreign governments and colonial powers) entered in v2regoppgroups. Hence, your answer should take into account the total size/number of the actors that oppose the regime and pose a threat to the regime maintaining power.
We remind you that groups need not be actively mobilized or explicitly engaged in high-level

opposition activities to be counted; key opposition groups may include actors who oppose the regime and constitute a dormant threat to the regime, even though they do not take particular actions in a given year.
Regarding the issue of individuals potentially belonging to more than one "opposition group": Individuals should only be quot;countedquot; once for the purpose of this question. For example, if the two relevant opposition groups are (4) civil servants, which total about 5percent of the population, and all of them belong to a particular ethnic group (6) also coded as a relevant, the overall total size of the opposition groups is still 5percent (presuming that there are no other members of that ethnic group who oppose the regime).
We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:
0: Extremely small (About 1 percent of the population or less)
1: Very small (Between 1 percent and 5 percent of the population)
2: Small (Between 5 percent and 15 percent)
3: Moderate (Between 15 percent and 30 percent)
4: Large (More than 30 percent)
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 11-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing where v2regint is 0.

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Irrespective of its stance toward the regime (pro-, anti-, or neutral), which one

group is the most important for affecting the current regime's chances of staying in power?
CLARIFICATION: Here we ask you to disregard group preferences, and only consider a group's resources and capabilities vis-a-vis affecting regime survival. In other words, do not consider whether this group is pro-regime, anti-regime, or neutral to the regime. Take only into consideration the capabilities of this group to affect regime survival, if key members of the group were to hypothetically mobilize the group in an effort to remove the regime. Politically neutral, as well as pro- and anti-regime groups, may have ample resources and be capable of organizing coordinated action. As a result, all three types of groups may have great influence over regime survival and change.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.
5: The military.
6: An ethnic or racial group(s).
7: A religious group(s).
8: Local elites, including chiefs.
9: Urban working classes, including labor unions.
10: Urban middle classes
11: Rural working classes (e.g., peasants).
12: Rural middle classes (e.g., family farmers)
13: A foreign government or colonial power.
DATA RELEASE: 11-16.
CROSS-CODER AGGREGATION: Mode.
quot;Tiesquot; between categories are resolved so that the corresponding category in v2regsupgroups
with the highest mean for the same country-date is chosen.
CLEANING: Set to missing where v2regint is 0.

(2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (one) group has the strongest pro-regime preferences, irrespective of the group's resources and capabilities for affecting the regime's hold on power?
CLARIFICATION: Consider only the pro-regime preferences of individuals in this group, and do not take into consideration the abilities of this group to actually affect regime survival. Hence, the group with the strongest pro-regime preferences need not be the most important support group.
One way to think about what pro-/anti-regime preferences means is: what would individuals hypothetically (honestly) answer if asked in a survey: "On a scale from 0-10, how pleased are you with the current political regime, with 10 indicating the strongest support." Select the group with the highest average score in this hypothetical survey.
We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.

2.2.9 V-Dem Indicators - Legitimation

Instructions to the coders (as shown in the surveys)

Legitimation strategies:

Governments make legitimacy claims–provide justifications for the form of rule under which they govern. In the following section we are interested in the nature of the legitimacy claims made by the sitting government. Please note that the government's claims to legitimacy - their legitimation strategies - are the object of inquiry here. We are not asking you to assess how ordinary people judge the legitimacy of their rulers. Do not assume that governments make legitimacy claims on only one basis. We are interested in multi-track and hybrid legitimation strategies. The regime is understood as a set of formal and/or informal rules that govern the choice of political leaders and their exercise of power. The government is understood as the chief executive along with the cabinet, ministries, and top civil servants.

2.2.10 V-Dem Indicators - The Judiciary

Instructions to the coders (as shown in the surveys)

Judiciary: This set of questions pertains to the judiciary. Before you proceed, we would like to clarify several general points. First, some questions below refer to the judiciary in general, whereas others ask for specific evaluations of particular courts or types of courts. Unless otherwise prompted, please consider the judiciary as a whole. This includes all courts in the judicial system at every level, both general jurisdiction courts and more specialized courts. However, with potentially one exception, it excludes specialized courts that are located outside the judiciary, *e.g.* an immigration court that lies inside the executive branch. The one potential exception is the peak constitutional court of the country. Please include this court in your considerations, even though it will be located outside of the judiciary in some countries. If the country you are coding is a federal state, please focus only on the federal judiciary and the federal government.

Seven of the questions about the judiciary concern high courts. By "high court" we are asking you to consider the country's constitutional court, if one exists. If there is no constitutional court, please consider the court of last resort for constitutional matters. If there is no court in your country with constitutional jurisdiction, please consider the highest ordinary court of the state.

For example, in Mexico in 2004, you would consider the Supreme Court of Justice of the Nation and not the Electoral Tribunal for the Federal Judiciary. In Russia in the same year, you would consider the Constitutional Court of the Russian Federation and not the Supreme Court of the Russian Federation. In Sweden, you would ignore the Supreme Administrative Court and instead focus on the Supreme Court. Germany has both a constitutional court, the Federal Constitutional Court, and a court of last resort for ordinary matters, the Federal Court of Justice. The Federal Constitutional Court is the high court for our purposes. In the United States, there is no separate constitutional court or review body. The Supreme Court is both the highest ordinary court and the highest court in the

state with constitutional jurisdiction. Therefore, we consider it to be the high court of the United States. smallskip If your country's highest judicial body has separate divisions, only one of which is dedicated to final constitutional review, please consider that division to be the high court if its judges are permanently assigned to that division only. For example, the Supreme Court of Justice of Costa Rica has four chambers. The Fourth Chamber reviews constitutional matters, its judges are appointed to it specifically and the other judges of the Supreme Court do not rotate onto the Fourth Chamber. Therefore, the high court for Costa Rica is the constitutional chamber of the Supreme Court of Justice.

If a new high court was established in a given year, please consider that court as the high court for the purposes of these questions only if the court was functioning for the majority of the calendar year. If a new high court was established in a given year, but did not start functioning until a subsequent year, please do not consider the new court as the high court until it was functioning for the majority of the given calendar year. If you are considering a semi sovereign territory, such as a colony, please answer this question with respect to the government or judicial bodies seated within the territory in question (*e.g.*, the governor-general and his local administration in a British colony or a Commonwealth country), not abroad (*e.g.*, the King/Queen or government of England).

In coding the following questions it is sometimes important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens "on the ground"). In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues wherever you see them.

QUESTION: When the high court in the judicial system is ruling in cases that are salient to the government, how often would you say that it makes decisions that merely reflect government wishes regardless of its sincere view of the legal record?
CLARIFICATION: We are seeking to identify autonomous judicial decision-making and its absence. Decisions certainly can reflect government wishes without quot;merely reflectingquot; those wishes, *i.e.* a court can be autonomous when its decisions support the government's position. This is because a court can be fairly persuaded that the government's

position is meritorious. By quot;merely reflect the wishes of the governmentquot; we mean that the court's own view of the record, its sincere evaluation of the record, is irrelevant to the outcome. The court simply adopts the government's position regardless of its sincere view of the record.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: The size of the judiciary is sometimes increased for very good reasons, as when judges are added to manage an increasing caseload; however, sometimes judges are added purely for political reasons. With this distinction in mind, please describe any increases in the size of the judiciary that occurred this calendar year.
CLARIFICATION: The second and third response categories permit you to distinguish among limited court packing efforts (*i.e.* when relatively few judgeships are added) by the political importance of the packing. For example, you may consider the packing of the high court to be more important than the packing of a lower court.
RESPONSES:
0: There was a massive, politically motivated increase in the number of judgeships across the entire judiciary.
1: There was a limited, politically motivated increase in the number of judgeships on very important courts.
2: There was a limited, politically motivated increase in the number of judgeships.
3: Judgeships were added to the judiciary, but there is no evidence that the increase was politically motivated; or there was no increase.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: A previous version of the variable contained category quot;4: There was no increasequot;. As of November 2014, all responses in category quot;4quot; are assigned to category quot;3quot;, since the two responses have the same meaning in practice.
DATA RELEASE: 1-16.

2.2.11 V-Dem Indicators - The Legislature

Instructions to the coders (as shown in the surveys)

The Legislature:

The following questions pertain to the legislature, an assembly of deputies or representatives with powers to consider, pass, amend, or repeal laws. If there is no legislature in the country you are coding for some period of years, do not code any questions for those year. If you are considering a semi-sovereign territory such as a colony please answer this question with respect to the legislature that is seated within the territory in question (such as the local legislative assembly in a British colony, not the Parliament in London). A popular election need not involve universal suffrage; indeed, suffrage may be highly restricted. A "direct election" can include seats reserved for special groups (*e.g.*, ethnic groups or women) so long as these members are chosen by popular election.

Frequently, it is important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens on the ground). In order to clarify the *de jure/de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues. Note that sometimes we ask different coders to code different aspects of a question. So, you might get a question about the *de facto* state of affairs, but another source might provide the answer to the *de jure* state of affairs.

2.2.11.1 Lower chamber committees (v2lgcomslo)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Pamela Paxton
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Considering all disadvantaged social groups in the country, how well represented are these groups, as a whole, in the national legislature?
CLARIFICATION: Disadvantage refers to socioeconomic disadvantage. Specifically, in order to be considered disadvantaged members of a social group must have an average income that is significantly below the median national income.
RESPONSES:
0: They have no representation at all.
1: They are highly under-represented relative to their proportion of the general population.
2: They are slightly under-represented relative to their proportion of the general population.
3: They are represented roughly equal relative to their proportion of the general population.
4: They are over-represented relative to their proportion of the general population.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category 0: There are no disadvantaged groups in the society, is coded as a separate variable (v2lgdsadlobin). The variable is then rebased to zero.
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v2lgbicam is 0

YEARS: 1900-2025

2.2.12 V-Dem Indicators - The Media

Instructions to the coders (as shown in the surveys)

Media: Two types of media are distinguished in this section: (1) print (newspapers and magazines) and broadcast (radio and television), and (2) online media. We ask that you evaluate these categories as a whole. Thus, "the print and broadcast media" can provide a wide range of perspectives in a country even when individual publications or programs take a consistently narrow perspective.

Historical clarification: Two types of media are distinguished in this section: (1) print (newspapers and magazines) and (2) broadcast (radio) media. The latter is, however, only for reference to the contemporary era, and should of course be ignored before it appeared. But when applicable, we ask that you evaluate these categories as a whole. If there is no print or broadcast media at all in a given time period, leave the following questions blank (missing) for this time period. Please also explicitly note in the comments section at the end for which years there was no print or broadcast media at all.

2.2.12.1 Media bias (v2mebias)

Long tag: vdem_coder_level_v2mebias

Original tag: v2mebias

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Coppedge
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is there media bias against opposition parties or candidates?
CLARIFICATION: We ask you to take particular care in rating the year-to-year variation on this question if media bias tends to increase or decrease in election years. Coverage can be considered quot;more or less impartialquot; when the media as a whole present a mix of positive and negative coverage of each party or candidate.
RESPONSES:
0: The print and broadcast media cover only the official party or candidates, or have no political coverage, or there are no opposition parties or candidates to cover.
1: The print and broadcast media cover more than just the official party or candidates but all the opposition parties or candidates receive only negative coverage.
2: The print and broadcast media cover some opposition parties or candidates more or less impartially, but they give only negative or no coverage to at least one newsworthy party or candidate.
3: The print and broadcast media cover opposition parties or candidates more or less impartially, but they give an exaggerated *amount* of coverage to the governing party or candidates.
4: The print and broadcast media cover all newsworthy parties and candidates more or less impartially and in proportion to their newsworthiness.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Pemstein et al. Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Coppedge
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the government attempt to censor information (text, audio, or visuals) on

the Internet?
CLARIFICATION: Censorship attempts include Internet filtering (blocking access to certain websites or browsers), denial-of-service attacks, and partial or total Internet shutdowns. We are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political information or opinions. We are also not concerned with the *extent* of internet access, unless there is absolutely no access at all (in which case the coding should be 0).
RESPONSES:
0: The government successfully blocks Internet access except to sites that are pro-government or devoid of political content.
1: The government attempts to block Internet access except to sites that are pro-government or devoid of political content, but many users are able to circumvent such controls.
2: The government allows Internet access, including to some sites that are critical of the government, but blocks selected sites that deal with especially politically sensitive issues.
3: The government allows Internet access that is unrestricted, with the exceptions mentioned above.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;0 There is no internetquot; is coded separately as v2mecenefibin. The variable is then rebased to zero.
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the government directly or indirectly attempt to censor the print or broadcast media?
CLARIFICATION: Indirect forms of censorship might include politically motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities and distribution networks, selected distribution of advertising, onerous registration requirements, prohibitive tariffs, and bribery.
We are not concerned with censorship of non-political topics such as child pornography, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political speech.
RESPONSES:
0: Attempts to censor are direct and routine.
1: Attempts to censor are indirect but nevertheless routine.
2: Attempts to censor are direct but limited to especially sensitive issues.
3: Attempts to censor are indirect and limited to especially sensitive issues.
4: The government rarely attempts to censor major media in any way, and when such exceptional attempts are discovered, the responsible officials are usually punished.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Do the major print and broadcast media represent a wide range of political perspectives?
RESPONSES:
0: The major media represent only the government's perspective.
1: The major media represent only the perspectives of the government and a government-approved, semi-official opposition party.
2: The major media represent a variety of political perspectives but they systematically ignore at least one political perspective that is important in this society.
3: All perspectives that are important in this society are represented in at least one of the major media.

2.2.13 V-Dem Indicators - Political Equality

Instructions to the coders (as shown in the surveys)

Political Equality: This section pertains to political equality, that is, the extent to which members of a polity possess equal political power. It does not refer to the inevitable differentiation in power that occurs in all large societies between those who hold positions of power within the state (political elites) and lay citizens. It is, rather, about the distribution of political power among identifiable groups within the population.

What does it mean for a group of individuals to wield real political power? Although political power cannot be directly observed, one can infer that groups possess power to the extent that they: (a) actively participate in politics (by voting, etc.), (b) are involved in civil society organizations, (c) secure representation in government, (d) are able to set the political agenda, (e) influence political decisions, and (f) influence the implementation of those decisions. Please consider all these factors when answering the following questions. (Of course, the picture across these different dimensions may be mixed; your response should indicate the overall picture, taking all aspects of political power

into account.)

2.2.13.1 Educational equality (v2peedueq)

QUESTION: To what extent is high quality basic education guaranteed to all, sufficient to enable them to exercise their basic rights as adult citizens?
CLARIFICATION: Basic education refers to ages typically between 6 and 16 years of age but this varies slightly among countries.
RESPONSES:
0: Extreme. Provision of high quality basic education is extremely unequal and at least 75 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
1: Unequal. Provision of high quality basic education is extremely unequal and at least 25 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
2: Somewhat equal. Basic education is relatively equal in quality but ten to 25 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
3: Relatively equal. Basic education is overall equal in quality but five to ten percent (percent) of children receive such low-quality education that probably undermines their ability to exercise their basic rights as adult citizens.
4: Equal. Basic education is equal in quality and less than five percent (percent) of children receive such low-quality education that probably undermines their ability to exercise their basic rights as adult citizens.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: To what extent is high quality basic healthcare guaranteed to all, sufficient to enable them to exercise their basic political rights as adult citizens?
CLARIFICATION: Poor-quality healthcare can make citizens unable to exercise their basic rights as adult citizens by failing to adequately treat preventable and treatable illnesses that render them unable to work, participate in social or political organizations, or vote (where voting is allowed).
RESPONSES:
0: Extreme. Because of poor-quality healthcare, at least 75 percent (percent) of citizens' ability to exercise their political rights as adult citizens is undermined.
1: Unequal. Because of poor-quality healthcare, at least 25 percent (percent) of citizens' ability to exercise their political rights as adult citizens is undermined.
2: Somewhat equal. Because of poor-quality healthcare, ten to 25 percent (percent) of citizens' ability to exercise their political rights as adult citizens is undermined.
3: Relatively equal. Basic health care is overall equal in quality but because of poor-quality healthcare, five to ten percent (percent) of citizens' ability to exercise their political rights as adult citizens is undermined.
4: Equal. Basic health care is equal in quality and less than five percent (percent) of citizens cannot exercise their basic political rights as adult citizens.
SCALE: Ordinal, converted to interval by the measurement model.

2.2.13.4 Power distributed by sexual orientation (v2pepwrort)

Long tag: vdem_coder_level_v2pepwrort

Original tag: v2pepwrort

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:

VARIABLE TYPE: C

PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent is political power distributed according to sexual orientation?
CLARIFICATION: This question contrasts (A) the political power of heterosexuals and lesbian, gay, bisexual, and transgender (LGBT) members of the polity who are not open about their sexuality with (B) the political power of lesbian, gay, bisexual, and transgender (LGBT) members of the polity who are open about their sexuality. (A) will be referred to as quot;heterosexualquot; and (B) as quot;LGBT.quot;
Note that in comparing the political power of these two groups we are comparing their power per person. So, when we say that LGBT have less, equal, or more power than heterosexuals we mean relative to their share of the population (as near as this can be estimated).
RESPONSES:
0: LGBTs are entirely excluded from the public sphere and thus deprived of any real political power (even though they may possess formal powers such as the ballot).
1: LGBTs have much less political power than heterosexuals. LGBTs enjoy formal rights to participate in politics but are subject to informal norms that often serve to exclude them from the halls of power.
2: LGBTs have somewhat less political power than heterosexual citizens.
3: LGBTs have about the same political power as heterosexuals. Each group enjoys a degree of political power that is roughly proportional to their population.
4: LGBTs enjoy somewhat more political power than heterosexuals by virtue of greater wealth, education, and high level of organization and mobilization.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is political power distributed according to socioeconomic position?

CLARIFICATION: All societies are characterized by some degree of economic (wealth and income) inequality. In some societies, income and wealth are distributed in a grossly unequal fashion. In others, the difference between rich and poor is not so great. Here, we are concerned not with the degree of social inequality but rather with the political effects of this inequality. Specifically, we are concerned with the extent to which wealth and income translates into political power.
RESPONSES:
0: Wealthy people enjoy a virtual monopoly on political power. Average and poorer people have almost no influence.
1: Wealthy people enjoy a dominant hold on political power. People of average income have little say. Poorer people have essentially no influence.
2: Wealthy people have a very strong hold on political power. People of average or poorer income have some degree of influence but only on issues that matter less for wealthy people.
3: Wealthy people have more political power than others. But people of average income have almost as much influence and poor people also have a significant degree of political power.
4: Wealthy people have no more political power than those whose economic status is average or poor. Political power is more or less equally distributed across economic groups.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is political power distributed according to social groups?
CLARIFICATION: A social group is differentiated within a country by caste, ethnicity, language, race, region, religion, or some combination thereof. (It does *not* include identities grounded in sexual orientation or socioeconomic status.) Social group identity is contextually defined and is likely to vary across countries and through time. Social group identities are

also likely to cross-cut, so that a given person could be defined in multiple ways, *i.e.*, as part of multiple groups. Nonetheless, at any given point in time there are social groups within a society that are understood — by those residing within that society — to be different, in ways that may be politically relevant.
RESPONSES:
0: Political power is monopolized by one social group comprising a minority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
1: Political power is monopolized by several social groups comprising a minority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
2: Political power is monopolized by several social groups comprising a majority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
3: Either all social groups possess some political power, with some groups having more power than others; or different social groups alternate in power, with one group controlling much of the political power for a period of time, followed by another — but all significant groups have a turn at the seat of power.
4: All social groups have roughly equal political power *or* there are no strong ethnic, caste, linguistic, racial, religious, or regional differences to speak of. Social group characteristics are not relevant to politics.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

YEARS: 1789-2025

2.2.14 V-Dem Indicators - Political Parties

Instructions to the coders (as shown in the surveys)

Political parties:

A "political party" refers to an organization that nominates candidates for public office. A party may refer to a longstanding coalition such as the CDU/CSU in Germany if that coalition functions in most respects like a single party. Sometimes, the identity of a party is obscured by name changes. However, if the party/coalition changes names but retains key personnel and is still run by and for the same constituency then it should be considered the same organization. Our notion of a party includes loose factional groupings such as the Tories and Whigs in the 19th-century Britain or the Caps and Hats in 18th-century Sweden. Unless stated otherwise the following questions pertain to parties that compete for seats in the national legislature or for the presidency.

Most of the questions in the following section ask you to generalize across parties in a particular country (and at a particular point in time). We realize that practices vary from party to party; these are, after all, highly diverse organizations. However, for our purposes it is important to consider what the most common practices are.

In answering these questions it is sometimes important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens on the ground). In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues wherever you see them. And if there is no clarification of the issue, assume that the question is referring to practices rather than formal rules.

2.2.14.1 Party ban target (v2psbantar)

Long tag: vdem_coder_level_v2psbantar

Original tag: v2psbantar

QUESTION: How restrictive are the barriers to forming a party?
CLARIFICATION: Barriers include legal requirements such as requirements for membership or financial deposits, as well as harassment.
RESPONSES:
0: Parties are not allowed.
1: It is impossible, or virtually impossible, for parties not affiliated with the government to form (legally).
2: There are significant obstacles (*e.g.* party leaders face high levels of regular political harassment by authorities).
3: There are modest barriers (*e.g.* party leaders face occasional political harassment by authorities).
4: There are no substantial barriers.
ORDERING: If your answer is 1-4, proceed to the next question [v2psoppaut]. If your answer is 0, skip to the question about Party organization [v2psorgs].
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: How centralized is legislative candidate selection within the parties?
CLARIFICATION: The power to select candidates for national legislative elections is often divided between local/municipal party actors, regional/state-level party organizations, and national party leaders. One level usually dominates the selection process, while sometimes candidate selection is the outcome of bargaining between the different levels of party organization.

RESPONSES:
0: National legislative candidates are selected exclusively by national party leaders.
1: National legislative candidate selection is dominated by national party leaders but with some limited influence from local or state level organizations.
2: National legislative candidates are chosen through bargaining across different levels of party organization.
3: National legislative candidates are chosen by regional or state-level organizations, perhaps with some input from local party organizations or constituency groups.
4: National legislative candidates are chosen by a small cadre of local or municipal level actors.
5: National legislative candidates are chosen by constituency groups or direct primaries.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Is it normal for members of the legislature to vote with other members of their party on important bills?
RESPONSES:
0: Not really. Many members are elected as independents and party discipline is very weak.
1: More often than not. Members are more likely to vote with their parties than against them, but defections are common.
2: Mostly. Members vote with their parties most of the time.
3: Yes, absolutely. Members vote with their parties almost all the time.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

PROJECT MANAGER(S): Allen Hicken
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How unified is party control of the national government?
CLARIFICATION: With respect to the executive, consider only those offices that have effective power over policymaking. (If there is a monarch or president with very little policymaking power, this office should not be considered.) With respect to bicameral legislatures, consider only the chamber, or chambers, that have effective policymaking power. (If the upper chamber is inactive or clearly subordinate, consider only the lower chamber.) Leave this question blank if election was nonpartisan, *i.e.*, no parties (not even pro-government parties) were allowed.
RESPONSES:
0: Unified coalition control. A single multi-party coalition controls the executive and legislative branches of the national government. (This is true almost by definition in a parliamentary system where a single coalition gathers together a majority of seats.).
1: Divided party control. (A) Different parties or individuals (unconnected to parties) control the executive and the legislature or (B) Executive power is divided between a president/monarch and a prime minister, each of which belongs to different parties; or between a non-partisan monarch and a prime minister.
2: Unified party control. A single party controls the executive and legislative branches of the national government. (This is true almost by definition in a parliamentary system where a single party has a majority of seats.).
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Among the major parties, what is the main or most common form of linkage to their constituents?
CLARIFICATION: A party-constituent linkage refers to the sort of quot;goodquot; that the party offers in exchange for political support and participation in party activities.
RESPONSES:
0: Clientelistic. Constituents are rewarded with goods, cash, and/or jobs.
1: Mixed clientelistic and local collective.
2: Local collective. Constituents are rewarded with local collective goods, *e.g.*, wells, toilets, markets, roads, bridges, and local development.
3: Mixed local collective and policy/programmatic.
4: Policy/programmatic. Constituents respond to a party's positions on national policies, general party programs, and visions for society.

2.2.15 Digital Society Survey - Social Cleavages

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram,

Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.2.15.1 Arrests for political content (v2smarrest)

Long tag: vdem_coder_level_v2smarrest

Original tag: v2smarrest

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: How would you characterize the differences of opinions on major political issues in this society?
CLARIFICATION: While plurality of views exists in all societies, we are interested in knowing the extent to which these differences in opinions result in major clashes of views and polarization or, alternatively, whether there is general agreement on the general direction this society should develop.
RESPONSES:
0: Serious polarization. There are serious differences in opinions in society on almost all key political issues, which result in major clashes of views.

1: Moderate polarization. There are differences in opinions in society on many key political issues, which result in moderate clashes of views.
2: Medium polarization. Differences in opinions are noticeable on about half of the key political issues, resulting in some clashes of views.
3: Limited polarization. There are differences in opinions on only a few key political issues, resulting in few clashes of views.
4: No polarization. There are differences in opinions but there is a general agreement on the direction for key political issues.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.

2.2.16 Digital Society Survey - State Internet Regulation Capacity and Approach

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues,

ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.2.16.1 Abuse of defamation and copyright law by elites (v2smdefabu)

Long tag: vdem_coder_level_v2smdefabu

Original tag: v2smdefabu

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: To what extent do elites abuse the legal system (e.g., defamation and copyright law) to censor political speech online?
RESPONSES:
0: Regularly. Elites abuse the legal system to remove political speech from the Internet as regular practice.
1: Often. Elites commonly abuse the legal system to remove political speech from the Internet.
2: Sometimes. Elites abuse the legal system to remove political speech from the Internet about half the time.
3: Rarely. Elites occasionally abuse the legal system to remove political speech from the Internet.
4: Never, or almost never. Elites do not abuse the legal system to remove political speech from the Internet.
SCALE: Ordinal, converted to interval by the measurement model.

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the legal framework provide protection against defamatory online content, or hate speech?
RESPONSES:
0: No. The law provides no protection against Internet defamation and hate speech.
1: Not really. The law provides a weak protection and to very limited range of circumstances.
2: Somewhat. The law provides some protection against Internet defamation and hate speech but in limited circumstances, or only to particular groups of people.
3: Mostly. The law provides protection against Internet defamation and hate speech under many circumstances, and to most groups of people.
4: Yes. The law provides comprehensive protection against Internet defamation and hate speech.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Does the government have sufficient staff and resources to regulate Internet content in accordance with existing law?
RESPONSES:
0: No, almost all online activity happens outside of reach of the state, where it lacks the capacity to remove illegal content.
1: Not really. The state has extremely limited resources to regulate online content.
2: Somewhat. The state has the capacity to regulate only some online content or some portions of the law.
3: Mostly. The state has robust capacity to regulate online content, though not enough to regulate all content and all portions of the law.
4: Yes, the government has sufficient capacity to regulate all online content.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

QUESTION: What type of content is covered in the legal framework to regulate Internet?
RESPONSES:
0: The state can remove any content at will.
1: The state can remove most content, and the law protects speech in only specific, and politically uncontroversial contexts.
2: The legal framework is ambiguous. The state can remove some politically sensitive content, while other is protected by law.
3: The law protects most political speech, but the state can remove especially politically controversial content.
4: The law protects political speech, and the state can only remove content if it violates well-established legal criteria.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.

2.2.17 Digital Society Survey - Coordinated Information Operations

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein,

Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.2.17.1 Foreign governments ads (v2smforads)

Long tag: vdem_coder_level_v2smforads

Original tag: v2smforads

2.2.18 Digital Society Survey - Digital Media Freedom

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

QUESTION: How frequently does the government censor political information (text, audio, images, or video) on the Internet by filtering (blocking access to certain websites)?
RESPONSES:
0: Extremely often. It is a regular practice for the government to remove political content, except to sites that are pro-government.
1: Often. The government commonly removes online political content, except sites that are pro-government.
2: Sometimes. The government successfully removes about half of the critical online political content.
3: Rarely. There have been only a few occasions on which the government removed political content.
4: Never, or almost never. The government allows Internet access that is unrestricted, with the exceptions mentioned in the clarifications section.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Independent of whether it actually does so in practice, does the government have the technical capacity to actively shut down domestic access to the Internet if it decided to?
CLARIFICATION: A domestic Internet connection is any connection originating physically within the country, whether over wired, wireless, or satellite networks. This question asks what proportion of potential Internet connections of domestic origin the government has the capacity to render inoperable.
RESPONSES:
0: The government lacks the capacity to shut down any domestic Internet connections.
1: The government has the capacity to shut down roughly a quarter of domestic access to the Internet.
2: The government has the capacity to shut down roughly half of domestic access to the Internet.
3: The government has the capacity to shut down roughly three quarters of domestic access to the Internet.
4: The government has the capacity to shut down all, or almost all, domestic access to the Internet.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

QUESTION: How prevalent is the usage of social media platforms that are wholly controlled by either the government or its agents in this country?
RESPONSES:

0: Essentially all social media usage takes place on platforms controlled by the state.
1: Most usage of social media is on state-controlled platforms, although some groups use non-state-controlled alternatives.
2: There is significant usage of both state-controlled and non-state-controlled social media platforms.
3: While some state-controlled social media platforms exist, their usage only represents a small share of social media usage in the country.
4: Practically no one uses state-controlled social media platforms.

2.2.19 Digital Society Survey - Online Media Polarization

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

QUESTION: Do the major domestic online media outlets give a similar presentation of major (political) news?
RESPONSES:
0: No. The major domestic online media outlets give opposing presentation of major events.
1: Not really. The major domestic online media outlets differ greatly in the presentation of major events.
2: Sometimes. The major domestic online media outlets give a similar presentation of major events about half the time.
3: Mostly. The major domestic online media outlets mostly give a similar presentation of major events.
4: Yes. Although there are small differences in representation, the major domestic online media outlets give a similar presentation of major events.
SCALE: Ordinal, converted to interval by the measurement model.

2.2.20 V-Dem Indicators - Sovereignty and State

Instructions to the coders (as shown in the surveys)

Sovereignty: This section addresses a number of issues concerning the sovereignty of the state. A state is political organization that organizes compulsory domination over a fixed territory on a continual basis. With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Here, we are interested in the state's autonomy from other actors in the system. The second component of sovereignty concerns the relationship of the state to the population and territory over which it claims to rule. Here, we want to gauge the extent of recognition of the preeminent authority of the state over its claimed territory and population.

Sovereignty – Historical clarification: This section addresses a number of issues concerning the state. A state is a political organization that organizes compulsory domination over a fixed territory on a continual basis. The questions concern two general themes: state sovereignty and state administration.

With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Here, we are interested in the state's autonomy from and recognition by other actors in the system. The second component of sovereignty concerns the relationship of the state to the population and territory over which it claims to rule. Here, we want to gauge the extent of recognition of the preeminent authority of the state over its claimed territory and population.

A second attribute of states is the state administration: the set of institutions that administer and implement governmental decisions. Here we are mainly interested in the professionalization, or lack thereof, of the state administrative staff – in this context termed the state administrators.

The State: "This section addresses a number of issues concerning the state. A state is a political organization that organizes compulsory domination over a fixed territory on a continual basis. The questions concern two general themes: state sovereignty and state administration.

With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Here, we are interested in the state's autonomy from and recognition by other actors in the system. The second component of sovereignty concerns the relationship of the state to the population and territory over which it claims to rule. Here, we want to gauge the extent of recognition of the preeminent authority of the state over its claimed territory and population.

A second attribute of states is the state administration: the set of institutions that administer and implement governmental decisions. Here we are mainly interested in the professionalization, or lack thereof, of the state administrative staff–in this context termed the state administrators."

QUESTION: To what extent are appointment decisions in the armed forces based on personal or political connections or alternatively based on skills and merit?

CLARIFICATION: Appointment decisions include hiring, firing and promotions in the armed forces. Note that the question refers to the typical *de facto* (rather than *de jure*) situation obtaining in the armed forces. If there are large differences between different branches of the armed forces or between top and lower level ranks please try to consider the average when answering the question.

RESPONSES:
0: All appointment decisions in the armed forces are based on personal or political connections. None are based on skills and merit.
1: Most appointment decisions in the armed forces are based on personal or political connections. Only a few are based on skills and merit.
2: Approximately half of the appointment decisions in the armed forces are based on personal or political connections. Approximately half are based on skills and merit.
3: Only few of the appointment decisions in the armed forces are based on personal or political connections. Most are based on skills and merit.
4: None of the appointment decisions in the armed forces are based on personal or political connections. All are based on skills and merit.

QUESTION: To what extent are state administrators salaried employees?
CLARIFICATION: A state administrator is anyone who works for the state administration. By quot;salaried employeequot;, we mean someone who is employed on a contract and paid a regular allowance directly out of the state coffers. It does not include unpaid work; work paid

for through a private collection of fees, material perquisites or bribes; private employment by a higher-ranking quot;patronquot; within the administration; contractors being paid on an irregular basis; or quot;parastatalsquot; (those working for state-owned companies), since the latter are not paid directly out of the state coffers. Note that the question refers to the practices obtaining in the state administration, excluding the armed forces.
RESPONSES:
0: None or almost none are salaried state employees.
1: A small share is salaried state employees.
2: About half are salaried state employees.
3: A substantial number are salaried state employees.
4: All or almost all are salaried state employees.
SCALE: Ordinal.

QUESTION: To what extent are members of the armed forces salaried employees?
CLARIFICATION: By members of the armed forces, we mean members of all ranks, excluding conscripts. By quot;salaried employeequot;, we mean someone who is employed on a contract and paid a regular allowance directly out of the state coffers. It does not include unpaid work, work paid for through a private collection of fees, material perquisites or bribes, or private employment by a higher-ranking quot;patronquot; within the armed forces.
RESPONSES:
0: None or almost none are salaried employees
1: A small share is salaried employees
2: About half are salaried employees
3: A substantial number are salaried employees
4: All or almost all are salaried employees

ORDERING: Ordinal.

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the state autonomous from the control of other states with respect to the conduct of domestic policy?
CLARIFICATION: The question of domestic autonomy does not include restrictions emanating from treaties (*e.g.*, NATO), international organizations (*e.g.*, the WTO), or confederations (*e.g.*, the European Union) if these agreements are freely negotiated by the state and if the state is free to exit from that treaty, organization, or confederation. Nor does it include restrictions on policymaking emanating from international market forces and trans-national corporations.
RESPONSES:
0: Non-autonomous. National level authority is exercised by an external power, either by law or in practice. The most common examples of this are direct colonial rule and military occupation (*e.g.* quadripartite occupation of Germany in 1945). It also includes situations in which domestic actors provide *de jure* cover for *de facto* control by a foreign power (*e.g.* Vichy France). However, control of some part of the territory of a state by an enemy during war is not considered control by external actors if the sovereign government remains on scene and continues to wage conventional war (*e.g.*, the USSR during WW II).
1: Semi-autonomous. An external political actor directly constrains the ability of domestic actors to rule, decides who can or cannot rule through formal rules or informal understandings, or precludes certain policies through explicit treaty provisions or well-understood rules of the game from which the subject state cannot withdraw. Examples include Soviet quot;satellitequot; states in Eastern Europe, and situations where colonial powers grant limited powers of national self-government to their possessions (*e.g.*, protectorates and limited home government).

2: Autonomous. Domestic political actors exercise political authority free of the direct control of external political actors.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the state autonomous from the control of other states with respect to the conduct of its foreign policy?
RESPONSES:
0: Non-autonomous. Foreign policy is controlled by an external power, either *de facto* or *de jure*. The most common examples of this are colonial rule and military occupation (*e.g.* quadripartite occupation of Germany in 1945). Situations in which domestic actors provide *de jure* cover for *de facto* control by a foreign power should not be construed as semi-autonomy (*e.g.* Vichy France). Governments in exile that control underground forces waging unconventional warfare are not considered as mitigating an occupation regime (*e.g.* countries under German occupation during WWII).
1: Semi-autonomous. An external political actor directly constrains the ability of domestic actors to pursue an independent foreign policy course in some important areas. This may be the product of explicit treaty provisions or well-understood rules of the game from which the subject state cannot withdraw. Examples would include Soviet strictures over rule in so-called quot;satellitequot; states in Eastern Europe, and explicitly negotiated postwar settlements (*e.g.* Austria following WWII).
2: Autonomous. Domestic political actors exercise foreign policy free of the direct control of external political actors. Direct control is meant to exclude the exercise of constraint or the impact of interdependence in the international system. Treaties in which states concede some part of that control to a supra- or international organization voluntarily, and from which there is a possibility of exit should not be interpreted as a violation of autonomy.

SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Over what percentage (percent) of the territory does the state have effective control?
CLARIFICATION: With this question we seek to judge the extent of recognition of the preeminent authority of the state over its territory. We are not interested here in perfect control by the state, or whether it is relatively effective in comparison to other states, but an assessment of the areas over which it is hegemonic, *e.g.* where it is recognized as the preeminent authority and in a contest of wills it can assert its control over political forces that reject its authority. Several illustrative examples may help in this coding. During civil wars the claim of the state to rule is effectively neutralized by insurgent groups (*e.g.*, the Tamil Tigers in Sri Lanka). There are also situations in which criminals or warlords exert control in contravention of state authority (*e.g.* opium growers in parts of Indochina). There are also cases of failed states where the central government cannot assert control over a share of its territory (*e.g.*, contemporary Somalia). Here, we ask you to estimate the size of the territory that the state has effective control over, as a percentage (percent) of the total territory that is officially part of the country.
By quot;officially part of the countryquot; we refer to international law. In cases where international law is not entirely clear, we refer you to general understandings. For example, China claims sovereignty over Taiwan, but it remains under the control of its own government. For purposes of this question, Taiwan should not be considered a failure to control its territory by the government of the PRC.
RESPONSES:
Percent.
SCALE: Interval.

2.2.21 Historical V-Dem - Civil Liberty

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Civil Liberty-* section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.2.21.1 Labor rights (v3cllabrig)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does labor enjoy the right to organize freely and bargain collectively?
CLARIFICATION: Refers to actual practice not formal (*de jure*) rights. If practices vary across the country, or across sectors, please consider the overall situation of labor.
RESPONSES:
0: Independent labor unions (free from state or ruling party control) are not allowed.

1: Independent labor unions are allowed, at least in some sectors of the economy or some sections of the country. However, they are subject to harassment by the police, paramilitary groups, business associations, or other groups. Harassment refers to systematic beatings, imprisonment, outlawing of specific unions, and other actions that seriously impinge upon the ability of unions to organize and bargain collectively.
2: Independent labor unions are allowed and they do not face violent repression but the legal climate is not friendly (*e.g.*, quot;closed shopquot; rules are widespread), making it difficult to organize and bargain collectively.
3: Independent labor unions are allowed and may organize freely in all sectors of the economy.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 8-16.

QUESTION: Are polling stations organized to guarantee voters a secret, anonymous choice?
RESPONSES:
0: No. Voters cannot make a secret, anonymous choice.
1: No. Some voters can make a secret, anonymous choice, but voting secrecy is in most instances violated.
2: Mixed. Voting secrecy and anonymity is assured to roughly the same extent as it is violated.
3: Yes. Most voters can make a secret, anonymous choice, but voting secrecy is in some instances violated.
4: Yes. All voters can make a secret, anonymous choice.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 8-16.

PROJECT MANAGER(S): Daniel Ziblatt
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is there a large discrepancy in the vote/seat ratio across electoral districts for the lower (or unicameral) chamber?
CLARIFICATION: quot;Malapportionmentquot; characterizes a situation in which voters in some districts have more power by virtue of a more favorable vote/seat ratio. For example, if seats have not been reapportioned in a long time rural areas may be over-represented relative to urban areas simply because the latter have grown more rapidly than the former. (This question does not address inequality of votes based on class or other criteria.) Leave blank if there is no lower (or unicameral) chamber.
RESPONSES:
0: There is a high degree of malapportionment. Vote/seat ratios across districts differ by as much as 50:1.
1: There is a substantial degree of malapportionment. Vote/seat ratios across districts differ as much as 10:1.
2: There is some degree of malapportionment. Vote/seat ratios across districts differ by as much as 2:1.
3: There is modest or no malapportionment. Vote/seat ratios across districts differ by less than 2:1.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is there a legal or constitutional statute, upheld in practice, stating that seats or electoral boundaries for elections to the lower (or unicameral) chamber of the legislature should be regularly reapportioned?
CLARIFICATION: Reapportionment is the process of reallocating the number of seats or the boundaries of a district in order to reflect its relative share of the population. Answering yes does not imply perfect apportionment (see later question). Leave blank if no lower (or

unicameral) chamber. (This question is not about suffrage or informal restrictions to suffrage.)
RESPONSES:
0: No.
1: Yes, reapportionment is stipulated by constitution or law but not upheld in practice.
2: Yes, reapportionment is stipulated by constitution or law and upheld in practice.

2.2.23 Historical V-Dem - Political Equality

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Political Equality-* section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.2.23.1 Equal vote legislature/lower chamber (v3equavolc)

Long tag: vdem_coder_level_v3equavolc

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the lower chamber of the legislature required to approve the budget?
CLARIFICATION: The budget refers to major revenue (appropriations) and expenditure (spending) bills. Typically, these are passed annually or bi-annually. Approval is understood to mean a formal vote on the floor of the chamber in which at least 50percent of those voting approve the measure.
RESPONSES:
0: No. Includes situations in which (a) there are no formal budget bills, or (b) the executive entirely by-passes the lower house or ignores its actions.
1: Yes. Includes situations in which (a) the executive exercises selective (quot;line-itemquot;) vetoes, and (b) there is a prolonged period in which no budget is passed and the executive is unable to raise and spend money, or must operate under the terms of the previous budget.
SCALE: Dichotomous
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

QUESTION: During the year, for how long was the lower (or unicameral) chamber of the legislature in session?
CLARIFICATION: If there is only one session during the year, your answer should reflect the length of this session. If there are multiple sessions, your answer should reflect the total time spent in session, adding together the length of all session during the year.
RESPONSES:
0: It did not convene at all during the year.
1: It did convene, and was in session for less than 1 month, in total.
2: It did convene, and was in session for 1-2 months, in total.
3: It did convene, and was in session for 3-5 months, in total.
4: It did convene, and was in session for 6-8 months, in total.
5: It did convene, and was in session for 9 months or more, in total.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 8-16.

2.2.25 Historical V-Dem - Historical V-Dem Modified

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

V-Dem indicators that are different to their contemporary counterparts, for the purpose of gathering additional relevant information for the historical period in Historical V-Dem. These variables are also merged into their v2 equivalents.

First, In contrast to contemporary V-Dem, Historical V-Dem codes upper chamber elections and thus also includes eltype category 2. Those observations are treated as missing in the historical-contemporary merged version of v2eltype. Due to election specific variables being cleaned by v2eltype, these do not include upper chamber elections either. In order to include historical data on upper chamber elections we thus also provide v3eltype and v3 election specific variables that are cleaned by v3eltype.

Second, Historical V-Dem codes additional chambers compared to contemporary V-Dem. When merging v2lgbicam and v3lgbicam the categories get recoded as follows:

- Categories 3 (tricameral) and 4 (quadricameral) become category 2 for the merged v2lgbicam.
- Category 9 (Other types of legislature) becomes category 0 for the merged v2lgbicam.

In order to include historical data on additional chambers, we thus also provide v3lgbicam and v3 chamber specific variables that are cleaned by v3lgbicam.

2.2.25.1 Lower chamber committees (v3lgcomslo)

QUESTION: Do members of the legislature abuse their position for financial gain?
CLARIFICATION: This includes any of the following: (a) accepting bribes, (b) helping to obtain government contracts for firms that the legislator (or his/her family/friends/political supporters) own, (c) doing favors for firms in exchange for the opportunity of employment after leaving the legislature, (d) stealing money from the state or from campaign donations for personal use.
Please make your best estimate, based upon what is known or suspected to be true.
RESPONSES:
0: Never, or hardly ever.
1: Very occasionally. There may be a few legislators who engage in these activities but the vast majority do not.
2: Sometimes. Some legislators probably engage in these activities.
3: Often. Many legislators probably engage in these activities.
4: Commonly. Most legislators probably engage in these activities.

YEARS: 1789-2010

2.2.26 Historical V-Dem - Political Parties

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Political Parties*- section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.2.26.1 Party identification (v3partyid)

Long tag: vdem_coder_level_v3partyid

Original tag: v3partyid

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_nr
QUESTION: Do voters identify with a political party?
CLARIFICATION: When party identification is strong, vote choice is largely determined by

a voter's party affiliation (and his/her affiliation with that party) rather than attachments to particular candidates, non-partisan issue-positions, or material incentives (*e.g.*, vote-buying). Likewise, when party identification is strong, voters retain loyalty to a single party rather than switching from one party to another across elections or across offices in the same election (ticket-splitting). In this fashion we can somewhat crudely distinguish between partisans and non-partisans. Note that this question refers only to voters, not to members of the population who do not vote (because they are disenfranchised, choose not to vote, or are discouraged from voting). Leave this question blank if there are no national elections.
RESPONSES:
0: There are national elections, but there are no political parties.
1: Only one party is allowed to participate in national elections.
2: More than one party participates, and nearly all voters are non-partisans.
3: More than one party participates, and most voters are non-partisans.
4: More than one party participates, and voters are equally divided between partisans and non-partisans.
5: More than one party participates, and most voters are partisans.
6: More than one party participates, and nearly all voters are partisans.
SCALE: Nominal, but categories 2—6 constitute ordinal.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Mean.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1789-2010

2.2.27 Historical V-Dem - Sovereignty and State

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Sovereignty and State-* section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.2.27.1 Rulers involvement in the state administration (v3struinvadm)

Long tag: vdem_coder_level_v3struinvadm

Original tag: v3struinvadm

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim,

(2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Agnes Cornell
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent are day-to-day decisions made by state administrators subject to intervention from political elites?
CLARIFICATION: By political elites we mean members of the executive, members of the legislature and political elites at local and regional levels. Note that the focus on the day-to-day decisions of the state administration implies interference in specific operational decisions in a meticulous manner. Decisions taken by rulers about the general direction of the state administration should not be considered. Note that the question refers to the *de facto* situation.
RESPONSES:
0: Constantly. Day-to-day decisions taken by state administrators are constantly subject to intervention.
1: Often. Day-to-day decisions in the state administration are often subject to intervention.
2: About half. Approximately half of the day-to-day decisions in the state administration are subject to intervention.
3: Occasionally. Day-to-day decisions in the state administration are occasionally subject to intervention.
4: Never, or hardly ever. Day-to-day decisions in the state administration are never or hardly ever subject to intervention.
SCALE: Ordinal.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Can the state oversee and regulate the economy?
CLARIFICATION: This refers to the state's ability to keep track of economic activities in its territory and potentially influence them by shaping the incentives and constraints that private firms face to do business; *e.g.*, through licensing, granting exploitation rights, taxing, imposing market barriers, building infrastructure, offering subsidies, adjudicating conflicts, or enforcing regulations.
RESPONSES:
0: Most economic activities happen outside the reach of the state
1: The state steers some economic activities
2: The state steers a substantial share – but less than half – of the national economy
3: The state steers about half or more than half, of the national economy
4: The state steers all or almost all economic activities
SCALE: Ordinal.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Pemstein et al. YEARS: 1789-2010

2.2.28 Varieties of Indoctrination

The Varieties of Indoctrination (V-Indoc) dataset is constructed based on an expert survey fielded in collaboration with V-Dem and led by the ERC-funded project "Democracy under Threat: How Education can Save it" (DEMED). The dataset contains indices and indicators that measure indoctrination efforts in education and the media across 160 countries from 1945 to 2021. The indices capture broad dimensions of indoctrination such as indoctrination potential and indoctrination content, while the indicators cover topics related to the curriculum, teachers, schools, and the media. The principal investigators are Anja Neundorf, Eugenia Nazrullaeva, Ksenia Northmore-Ball, Katerina Tertytchnaya, and Wooseok Kim. For more information, please visit `https://www.gla.ac.uk/research/az/democracyresearch/`.

2.2.28.1 Centralized curriculum (v2edcentcurrlm)

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does a national authority set the official curriculum framework for schools?
CLARIFICATION: The official curriculum may only be a framework, to which individual schools can contribute.
For this question, we are interested in all school subjects across levels of primary and secondary public education. If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.
A national (or federal) authority can include a state body organized under the auspices of a Ministry of Education.
The sub-national level includes states, provinces, districts, municipalities, villages, local educational authorities, etc.
RESPONSES:
0: A national authority does not set the official curriculum framework, that is, the curriculum framework is completely set by sub-national authorities.
1: Sub-national authorities mostly set the official curriculum framework, with some input from the national authority.
2: A national authority mostly sets the official curriculum framework, with some input from sub-national authorities.
3: A national authority fully sets the official curriculum framework.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: What proportion of school textbooks across core subjects does a national authority approve centrally?
CLARIFICATION: For this question, we are interested in core subjects, such as languages, mathematics, science, arts, social studies, history, geography. We are not interested in textbooks teaching foreign languages that could be subcontracted to a foreign publisher.
Please consider school subjects across levels of formal primary and secondary public education. If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.
Examples of ways in which textbook production is centrally approved or authorized include: a national public authority reviews textbook content and approves textbooks for use in schools; there is a state-mandated national list of textbooks that schools are recommended to use; the Ministry of Education directly publishes textbooks. A national (or federal) authority can include a public authority organized under the auspices of a Ministry of Education or a different authority.
RESPONSES:
0: No textbooks are centrally approved by a national authority.
1: Some textbooks are centrally approved by a national authority.
2: All textbooks are centrally approved by a national authority.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do students have opportunities to discuss what they are taught in history classes?

CLARIFICATION: This question regards the degree to which students are *de facto* given the opportunity to engage in debates which question the material and content of their history classes, as well as being able to voice disagreement with each other. Critical engagement with the content can be expressed by engaging in discussions with the teacher or other students, in oral presentations, or in written work (for example, exams and essays).
Opportunity means that critically engaging with the content would not bring down students' marks.
RESPONSES:
0: Students are never or rarely given the opportunity to discuss what they are taught.
1: Students are sometimes given the opportunity to discuss what they are taught.
2: Students are often given the opportunity to discuss what they are taught.
3: Students are extensively given the opportunity to discuss what they are taught.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: How often does the history curriculum promote a specific societal model or ideology?
CLARIFICATION: A societal model or ideology is generally a codified set of beliefs used to justify a particular social and political order, for example, socialism, democracy, liberalism, fascism or social orders related to a specific religion.
The history curriculum can promote a specific ideology or societal model by often referring to it and clearly interpreting one model as better than other alternatives.
We are not just interested in *de jure* history subjects, but also in the *de facto* subject content. Please consider a typical situation for students in primary and secondary schools. If the situation varies across educational levels, please provide the response that is most accurate for the majority of students.
RESPONSES:

0: Rarely or never.
1: Sometimes.
2: Often.
3: Extensively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.

QUESTION: How often does the language curriculum promote patriotism?
CLARIFICATION: We are interested in the curriculum for core subjects in language studies, common to a majority of students, for example, teaching the official language(s) of the country. We are not interested in foreign languages.
By promoting patriotism, we mean encouraging feelings of love, pride, loyalty and commitment to one's country. For example, promoting patriotism can take the form of teaching narratives that celebrate the country's military past, national origin stories, the majority ethnic or religious group, or accomplishments in economic or technological sectors. Patriotic education could be part of the texts used to teach basic literacy skills (e.g. handwriting exercises), language textbooks, assigned readings in the literature curriculum, as well as in accompanying teaching manuals.
Please consider a typical situation for students in primary and secondary schools. If the situation varies across educational levels, please provide the response that is most accurate for the majority of students.
RESPONSES:
0: Rarely or never.
1: Sometimes.
2: Often.
3: Extensively.
SCALE: Ordinal, converted to interval by the measurement model.

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are primary school students required to study at least one subject that predominately focuses on teaching political values?
CLARIFICATION: Examples of subjects that focus on teaching political values include specific subjects in political education, as well subjects where political values are integrated in the curriculum: for example, moral, religious, and civic education; ethics and civics; 'knowledge about society' with elements of sociology, politics, legal studies, or economics. This does not include history as a subject. We are not interested in *de jure* subject labels but in *de facto* subject content: a course does not need to be entitled "political values" to be considered here.
Political values refer to goals that are the desirable purposes for socio-political organizations such as the political community, the nation-state, and regime. Political values guide an individual's or group's general behavior/attitudes toward political 'objects' (e.g. leaders, events, ideologies).
RESPONSES:
0: No. There is no general requirement for the majority of primary school students to study

at least one subject predominately focused on political values.
1: Yes. The majority of primary school students are required to study at least one subject that is predominately focused on political values.
SCALE: Binary, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: To what extent does the curriculum of subjects that include the teaching of political values cover topics related to individuals' political rights and duties?
CLARIFICATION: In this question we are asking about the subjects you considered in the previous two questions, on average across primary and secondary education. Again, these subjects may be specifically focused on political education or may be subjects into which the teaching of political values is only integrated.
Political rights and duties include: guarantees of equal political opportunities and equal protection under the law, regardless of race, religion, gender, or other personal attributes; the right or duty to vote; the right to organize and protest; or the right to join labor unions.
RESPONSES:
0: These subjects do not cover these topics.
1: These subjects rarely cover these topics.
2: These subjects cover these topics, but not at depth.
3: These subjects cover these topics in some depth.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are secondary school students required to study at least one subject that predominately focuses on teaching political values?
CLARIFICATION: Examples of subjects that focus on teaching political values include specific subjects in political education, as well subjects where political values are integrated in the curriculum: for example, moral, religious, and civic education; ethics and civics; 'knowledge about society' with elements of sociology, politics, legal studies, or economics. This does not include history as a subject. We are not interested in *de jure* subject labels but in *de facto* subject content: a course does not need to be entitled "political values" to be considered here.
In cases, where upper secondary education is specialized, please only consider lower secondary education.
Political values refer to goals that are the desirable purposes for socio-political organizations such as the political community, the nation-state, and regime. Political values guide an individual's or group's general behavior/attitudes toward political 'objects' (e.g. leaders, events, ideologies).
RESPONSES:
0: No. There is no general requirement for the majority of secondary school students to study at least one subject predominately focused on political values.
1: Yes. The majority of secondary school students are required to study at least one subject that is predominately focused on political values.
SCALE: Binary, converted to interval by the measurement model.

QUESTION: Do schools promote involvement in extracurricular civic and/or political activities?
CLARIFICATION: Extracurricular civic activities can include (but are not limited to): joining a political organization, a specific political party, the army, a civil society organization, a labor union, a grassroots activist organization, volunteering in the local community, leadership activities, school-community partnerships.
Schools can promote these activities by providing such opportunities (e.g. by having a school council), or encouraging pupils to get involved in these outside of school (e.g. by emphasizing the importance of volunteering).
RESPONSES:
0: Schools do not promote extracurricular civic and/or political activities.
1: Schools promote extracurricular civic and/or political activities to some extent, but these activities are not considered an integral part of education.
2: Schools promote extracurricular civic and/or political activities as an integral part of education.

PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_mode, *_nr
QUESTION: Are patriotic symbols displayed in schools?
CLARIFICATION: Examples of patriotic symbols include: the national flag, a picture or bust of current or past country leaders, singing the national anthem or reciting national pledges, and celebrations of national days, heroes, historical or military events (for example, victory in a war). It further includes symbols associated with the ruling party, royal family, military junta, or other group/entity representing the political regime (e.g., party logo, symbol for royal family, military symbol tied to the particular regime, symbol of specific ethnic group or class dominating the regime). Patriotic symbols include religious symbols if (and only if) religious and state authorities are closely interlinked.
Here we refer to the school building(s) and classrooms and not to the content of learning material, such as textbooks.
If there is significant variation in the use of patriotic symbols across the territory, the answer should reflect the average or typical school across the sub-national units.
RESPONSES:
0: Patriotic symbols are usually not displayed.
1: Patriotic symbols are displayed.
ORDERING: If answer is 0 in a given year, please skip v2edscpatriotcb for this year.
SCALE: Binary, converted to interval by the measurement model.
NOTES: This is a filtering question for v2edscpatriotcb. For the mode version of this variable, we assign an observation a value of 0.5 if the mode is not unique, i.e., a value of 0.5 represents a multimodal response distribution.
DATA RELEASE: 13-16.

QUESTION: Do history teachers have autonomy to deviate from the content of the official

curriculum in the classroom?
CLARIFICATION: Here we aim to capture the degree to which teachers have autonomy to *de facto* deviate from the intended or official curriculum in their classes. Examples of how teachers can deviate from the content of the official curriculum: selecting textbooks that are different from those authorized or recommended by a central authority; diverging from the official curriculum in terms of the amount of time allocated to different topics, or supplement/expand on the official curriculum.
In cases where there is no official history curriculum, or the official history curriculum sets only loose restrictions on teachers' autonomy, please code this question as zero (generally autonomous).
RESPONSES:
0: They are free to deviate to a large extent: teachers are generally autonomous.
1: They are free to deviate to a moderate extent: teachers' autonomy is somewhat restricted.
2: They are free to deviate to a small extent: teachers' autonomy is mostly restricted.
3: They are not at all free to deviate: teachers' autonomy is completely restricted.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: How likely is it that teachers would be fired if they were to publicly express political views that contradict the dominant political order?
CLARIFICATION: This question pertains to firings of teachers on the basis of their political views, statements or membership in parties or organizations. We are not interested in firings for reasons related to their performance or professional competencies.
Dominant political order: A country's political norms and key political institutions and authorities. We are not interested in the violations of predominant social, cultural and moral norms unless they are explicitly politicized.
Public expression of political views can happen at school or outside of school (for example,

public tweets, participation in a protest).
RESPONSES:
0: Teachers would almost never be fired.
1: Teachers would sometimes be fired.
2: Teachers would likely be fired.
3: Teachers would almost certainly be fired.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.

QUESTION: To what extent are hiring decisions for teachers based on their political views and/or political behavior and/or moral character?
CLARIFICATION: Please consider hiring decisions across all subjects.
This question concerns actual practice (*de facto*, not legislation pertaining to the recruitment procedures for teachers).
This question concerns hiring decisions based on political views, or statements, participation in political protests, or membership in political parties or other organizations on the part of hiring candidates. Note that these behaviors can result in either a) relevant candidates not being hired (for example, being denied a teaching job due to a party affiliation) and b) only specific candidates being hired (for example, being hired due to pro-regime ideological affinities, party membership or moral character). Note that sometimes "moral character" is used as a pretext for political hiring decisions. In such cases, treat this pretext as political.
Please consider the situation for both primary and secondary school teachers. If there are substantive differences between the primary and secondary education levels, please provide the response that applies to the majority of teachers.
RESPONSES:
0: Rarely or never.
1: Sometimes.

2: Often.
3: Almost exclusively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: What are the *de facto* education requirements to become a primary school teacher?
CLARIFICATION: If there is substantive variation at the sub-national or local levels, please consider the education requirements for the majority of primary school teachers in the country. Some countries may require a degree/diploma in education and others may accept a degree in any subject – indicate the completed education level required regardless of specialization. Please consider initial requirements to be a teacher not those for further professional development.
RESPONSES:
0: There are no educational requirements for aspiring teachers beyond proof of basic literacy and/or numeracy skills (ISCED Level 2 or lower).
1: Aspiring teachers must have completed a secondary school level education (ISCED Level 3).
2: Aspiring teachers must have achieved an education at the post-secondary, non-university level (for example, technical or vocational institutions) (ISCED Level 4).
3: Aspiring teachers must have completed at least one degree program taught at the university level (ISCED Level 5 and above).
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: In defining different education levels, we use the ISCED classification adopted by UNESCO, the International Standard Classification of Education (ISCED) 2011.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see

V-Dem Methodology).

QUESTION: Do officially recognized teacher unions exist in this country?
CLARIFICATION: Please answer this question without taking into account the nature of the union. That is, for the purposes of this question it is irrelevant if the teacher union is distinct or part of a larger union (e.g. a trade union federation). This question does not concern why a teacher's union does or does not exist. It is irrelevant if a union does not exist because (teacher) unionization is formally prohibited, teacher unionization can be allowed *de jure* but prohibited *de facto* due to government pressure, or there can be a lack of organization capacity among teachers.
RESPONSES:
0: No officially recognized teacher unions exist.
1: Officially recognized teacher unions exist.
ORDERING: If answer is 0 in a given year, please skip v2edteunionindp for this year.
SCALE: Binary, converted to interval by the measurement model.
NOTES: This is a filtering question for v2edteunionindp. For the mode version of this variable, we assign an observation a value of 0.5 if the mode is not unique, i.e., a value of 0.5 represents a multimodal response distribution.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Are officially recognized teacher unions independent from political authorities?
CLARIFICATION: Please answer this question regardless of the nature of teacher unions, that is, it is irrelevant if teacher unions are distinct or part of a comprehensive union (e.g. trade union federations). In cases where there is substantive sub-national variation, please consider teacher unions in the most populous sub-national units.
Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders such as presidents, prime minister or ministers.
This question does not distinguish between different mechanisms that can lead to teacher unions being dependent on the state. It is irrelevant if the relationship with the state was due to coercion, co-optation, or voluntary strategic alliances.
RESPONSES:
0: Teacher unions are fully independent.
1: Teacher unions are mostly independent.
2: Teacher unions are somewhat independent.
3: Teacher unions are not independent.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: Please answer this question only when option 1 was selected for v2edteunion.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
CLEANING: Set to missing when v2edteunion is 0.

QUESTION: Do political authorities have control over the production of entertainment content?
CLARIFICATION: Entertainment includes both broadcast and print content, such as movies, TV shows, radio shows, music, and magazines.
Here we distinguish between entertainment content and news content (although, in some cases news content can have an entertainment component, and vice versa), focusing on entertainment.
Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers.
It is irrelevant how political authorities came to exert the control over the entertainment content.
RESPONSES:
0: Political authorities exert almost no control over the production of entertainment content.
1: Political authorities exert some control over the production of entertainment content.
2: Political authorities exert a high level of control over the production of entertainment content.
3: Political authorities almost exclusively control the production of entertainment content.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: How often do media outlets promote patriotism?
CLARIFICATION: Promotion of patriotism can be associated with promotion of patriotic consciousness, the love of the country, national pride, loyalty and commitment. For example, specific narratives can celebrate the country's military past, national origin stories, or accomplishments in economic or technological sectors. Patriotism can be promoted in news, movies, TV shows, radio shows, music, or magazines.
For this question, please consider all (state-owned as well as not state-owned) broadcast and print media outlets.
RESPONSES:
0: Rarely or never.
1: Sometimes.
2: Often.
3: Extensively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.

QUESTION: For the print and broadcast media outlets NOT owned by the state, how often

do political authorities influence how these cover political issues?
CLARIFICATION: Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers. Political authorities can influence the coverage of non-state owned outlets both directly and indirectly. Indirect forms of control might include politically motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities (e.g. subsidized newsprint) and distribution networks, selected distribution of advertising, onerous registration requirements, and prohibitive tariffs. They might also include tax privileges, bribery, and cash payments. Indirect forms of control may also include the intimidation of owners, advertisers, and editors, through the use of threats and violence.
RESPONSES:
0: Political authorities (almost) never influence the coverage of key political issues.
1: Political authorities sometimes influence the coverage of key political issues.
2: Political authorities often influence the coverage of key political issues.
3: Political authorities almost always influence the coverage of key political issues.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: For the print and broadcast media outlets owned by the state, how often do political authorities influence how these outlets cover political issues?
CLARIFICATION: Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers. Political authorities can influence which political issues state-media cover, how, and how much they cover them. For example, they can exert influence by directly

or indirectly controlling the hiring and firing of producers, directors, writers, editors, and announcers; by manipulating the resources these media require; by withholding resources required for printing or broadcast. Political authorities can also directly dictate content and make editorial decisions.
RESPONSES:
0: Political authorities (almost) never influence the coverage of political issues.
1: Political authorities sometimes influence the coverage of political issues.
2: Political authorities often influence the coverage of political issues.
3: Political authorities almost always influence the coverage of political issues.

QUESTION: Out of the top four national broadcast media with the largest audience, how many are state-owned?
CLARIFICATION: If there are fewer than four national broadcast media, please provide your answer based on the number of existing national broadcast media.
Broadcast media includes radio and television stations whose content can be consumed offline or online, for example, through station's websites. Here, we are only interested in state ownership of the media – not in the extent to which the state may control editorial decisions. State ownership takes different forms. For example, state-owned media can be funded by government license fees and advertising. They can also be directly controlled by government agencies (e.g. the Ministry of Information and Culture). The state, the ruling party, or the Head of Government / the Head of State, can also be the owner of media in this context.
RESPONSES:

0: There are no state-owned broadcast media outlets.
1: State-owned outlets make up a minority of media broadcast outlets.
2: There is an equal share of state- and non-state owned broadcast media outlets.
3: State-owned outlets make up the majority of broadcast media outlets.
4: All broadcast media outlets are state-owned.
ORDERING: If v2medstateprint and v2medstatebroad are both set to 0 do not answer v2medpolstate. If both are set to 4 do not answer v2medpolnonstate.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is there a comprehensive monitoring system in place for public authorities to conduct external teacher inspection?
CLARIFICATION: This question concerns the formal monitoring efforts of the relevant public/government authorities (national / sub-national / local authorities / school district administration) to conduct external inspection of teachers, that is, it concerns the operations of a formal bureaucratic hierarchy outside of school that works to inspect teachers. We are not interested in peer review observations of teachers working in the same school. We are not interested in *de jure* formal procedures but whether they are *de facto* carried out in practice.
Teacher inspection can include external inspectors conducting teaching observations inside the classroom or during a class, before a class (audits of teachers' lesson plans) or after a class (for example, audits of students' notebooks and teachers' assessment of students' schoolwork).
We define a comprehensive inspection in the following way(s): inspections are regular, conducted according to standardized and transparent protocols, with impartial and objective judgements; inspection results are reported to relevant national or sub-national government offices, etc.
If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.

RESPONSES:

0: There is no external teacher inspection.
1: While there is a system in place for external teacher inspection, it is not comprehensive.
2: There is a generally comprehensive system in place for external teacher inspection.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

2.2.28.29 Government censorship effort — Media (v3mecenefm)

Long tag: vdem_coder_level_v3mecenefm

Original tag: v3mecenefm

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Coppedge
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the government directly or indirectly attempt to censor the print or broadcast media?
CLARIFICATION: Indirect forms of censorship might include politically motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities and distribution networks, selected distribution of advertising, onerous registration requirements, prohibitive tariffs, and bribery.
We are not concerned with censorship of non-political topics such as child pornography, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political speech.
RESPONSES:
0: Attempts to censor are direct and routine.
1: Attempts to censor are indirect but nevertheless routine.
2: Attempts to censor are direct but limited to especially sensitive issues.
3: Attempts to censor are indirect and limited to especially sensitive issues.
4: The government rarely attempts to censor major media in any way, and when such exceptional attempts are discovered, the responsible officials are usually punished.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-15.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*)

YEARS: 1789-1920

2.3 V-Dem Country-Year: V-Dem Full+Others v16

Dataset tag: vdem_cy

Output Unit: V-Dem Country-Year, i.e., data is collected per country and year. That means each row in the dataset can be identified by one country in combination with a year, using the columns country_name and year. The unit can also be expressed through a combination of the columns county_id or country_text_id and year.

Description: All 531 V-Dem indicators and 245 indices + 60 other indicators from other data sources. For R users, we recommend to install our vdemdata R package which includes the most recent V-Dem dataset and some useful functions to explore the data.

2.3.1 Identifier Variables in the V-Dem Datasets

Variables in this section identify the observations in the dataset.

2.3.1.1 Country Name (country_name)

Long tag: vdem_cy_country_name

Original tag: country_name

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*

QUESTION: Name of coded country.
CLARIFICATION: A V–Dem country is a political unit enjoying at least some degree of functional and/or formal sovereignty.
RESPONSES:
Text
NOTES: For more details on country units consult the *V–Dem Country Coding Units* document.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.2 Country Name Abbreviation (country_text_id)

Long tag: vdem_cy_country_text_id

Original tag: country_text_id

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Abbreviated country names.
RESPONSES:
Text
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.3 V-Dem Country ID (country_id)

Long tag: vdem_cy_country_id

Original tag: country_id

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Unique country ID designated for each country.
RESPONSES:

Numeric
NOTES: A list of countries and their corresponding IDs used in the V–Dem dataset can be found in the country table in the codebook, as well as in the *V–Dem Country Coding Units* document.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.4 Year (year)

Long tag: vdem_cy_year

Original tag: year

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Four–digit designation of the year for which an observation is given that ranges from the start to the end of the coding period.
RESPONSES:
Numeric
NOTES: This variable is included in the V–Dem Country Year as well as Country Date datasets.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.5 Historical Date (historical_date)

Long tag: vdem_cy_historical_date

Original tag: historical_date

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Variable designating the date for which observation is given.
CLARIFICATION: The date is coded in *YYYY-MM-DD* format. December 31 observation

always refers to the situation at the end of the year. There can be observations on other dates signifying other events, i.e. elections or executive appointments.
RESPONSES:
Date
NOTES: This variable is included in the V–Dem Country Date dataset.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.6 V-Dem Project (project)

Long tag: vdem_cy_project

Original tag: project

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Indication what project team has coded country in respective year.
RESPONSES:
0: Contemporary.
1: Historical.
2: Both (overlap).
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.7 Historical V-Dem coding (historical)

Long tag: vdem_cy_historical

Original tag: historical

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Binary indication whether the country in question has been coded by the team of Historical V-Dem project.
RESPONSES:
0: No.
1: Yes.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.8 Start of Coding Period (codingstart)

Long tag: vdem_cy_codingstart

Original tag: codingstart

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Year in which coding of the country in question starts.
CLARIFICATION: V–Dem country coding starts in 1789, or from when a country first enjoyed at least some degree of functional and/or formal sovereignty.
RESPONSES:
Numeric
NOTES: For detailed information, please see the *V–Dem Country Coding Units* document.
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.9 End of Coding Period (codingend)

Long tag: vdem_cy_codingend

Original tag: codingend

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt,

McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*

QUESTION: Either a maximum year of country coding period or the year when the country ceased to exist because it lost functional or formal sovereignty.

RESPONSES:

Numeric

NOTES: For more details about V–Dem country coding periods, please see the *V–Dem Country Coding Units* document.

DATA RELEASE: 10-16.

CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.10 Contemporary Start of Coding Period (codingstart_contemp)

Long tag: vdem_cy_codingstart_contemp

Original tag: codingstart_contemp

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*

QUESTION: Year in which the coding of Contemporary V-Dem project starts.

CLARIFICATION: Variables from "Contemporary" project can have different question formulation, variable type, or number of coders as opposed to the "Historical" one.

RESPONSES:

Numeric

DATA RELEASE: 10-15.

CITATION: *V-Dem Codebook* (see suggested citation at the top of this document).

2.3.1.11 Contemporary End of Coding Period (codingend_contemp)

Long tag: vdem_cy_codingend_contemp

Original tag: codingend_contemp

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning,

Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Year in which the coding of Contemporary V-Dem project ends.
CLARIFICATION: Variables from "Contemporary" project can have different question formulation, variable type, or number of coders as opposed to the "Historical" one.
RESPONSES:
Numeric
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.12 Historical Start of Coding Period (codingstart_hist)

Long tag: vdem_cy_codingstart_hist

Original tag: codingstart_hist

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Year in which the coding of Historical V-Dem project starts.
CLARIFICATION: Variables from "Historical" project can have different question formulation, variable type, or number of coders as opposed to the "Contemporary" one.
RESPONSES:
Numeric
DATA RELEASE: 10-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

2.3.1.13 Historical End of Coding Period (codingend_hist)

Long tag: vdem_cy_codingend_hist

Original tag: codingend_hist

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Year in which the coding of Historical V-Dem project ends.
CLARIFICATION: Variables from "Historical" project can have different question formulation, variable type, or number of coders as opposed to the "Contemporary" one.

2.3.1.15 Country code (cowcode)

Long tag: vdem_cy_cowcode

Original tag: COWcode

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Correlates of War Project (2017)

Description:

VARIABLE TYPE: E
QUESTION: Correlates of War (COW) project country codes.
RESPONSES:
Numeric
SOURCE(S): Correlates of War Project (2017).
DATA RELEASE: 10-16.
CITATION: Correlates of War Project (2017).
YEARS: 1789-2025

2.3.2 V-Dem Democracy Indices - V-Dem High-Level Democracy Indices

This section groups together macro-level indices that describe features of democracy at the highest (most abstract) level. Please see Appendix A of the V-Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.2.1 Electoral Democracy Index (v2x_polyarchy)

Long tag: vdem_cy_v2x_polyarchy

Original tag: v2x_polyarchy

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Teorell et al. (2019), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell

ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the ideal of electoral democracy in its fullest sense achieved?
CLARIFICATION: The electoral principle of democracy seeks to embody the core value of making rulers responsive to citizens, achieved through electoral competition for the electorate's approval under circumstances when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and elections affect the composition of the chief executive of the country. In between elections, there is freedom of expression and an independent media capable of presenting alternative views on matters of political relevance. In the V-Dem conceptual scheme, electoral democracy is understood as an essential element of any other conception of representative democracy — liberal, participatory, deliberative, egalitarian, or some other.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_freexp_altinf v2x_frassoc_thick v2x_suffr v2xel_frefair v2x_elecoff
DATA RELEASE: 1-16. Release 1-5 used a different, preliminary aggregation formula.
AGGREGATION: The index is formed by taking the average of, on the one hand, the weighted average of the indices measuring freedom of association thick (v2x_frassoc_thick), clean elections (v2xel_frefair), freedom of expression (v2x_freexp_altinf), elected officials (v2x_elecoff), and suffrage (v2x_suffr) and, on the other, the five-way multiplicative interaction between those indices. This is half way between a straight average and strict multiplication, meaning the average of the two. It is thus a compromise between the two most well known aggregation formulas in the literature, both allowing partial quot;compensationquot; in one sub-component for lack of polyarchy in the others, but also punishing countries not strong in one sub-component according to the quot;weakest linkquot; argument. The aggregation is done at the level of Dahl's sub-components with the one exception of the non-electoral component. The index is aggregated using this formula:

$$v2x_polyarchy = \&.5 * MPI + .5 * API$$

$$\& = .5 * (v2x_elecoff * v2xel_frefair * v2x_frassoc_thick *$$

$$\& v2x_suffr * v2x_freexp_altinf)$$

$$\& + .5 * ((1/8) * v2x_elecoff + (1/4) * v2xel_frefair$$

$$\& + (1/4) * v2x_frassoc_thick + (1/8) * v2x_suffr$$

$$\& + (1/4) * v2x_freexp_altinf)$$

COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Teorell et al. (2019); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the ideal of liberal democracy achieved?
CLARIFICATION: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a quot;negativequot; view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_liberal v2x_polyarchy
DATA RELEASE: 1-16. Release 1, 2, and 3 used a different, preliminary aggregation formula.
AGGREGATION: The index is aggregated using this formula:
$v2x_libdem =$
$.25 * v2x_polyarchy^{1.585} + .25 * v2x_liberal + .5 * v2x_polyarchy^{1.585} * v2x_liberal$

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the ideal of participatory democracy achieved?
CLARIFICATION: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. To make it a measure of participatory democracy, the index also takes the level of electoral democracy into account.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_polyarchy v2x_partip
DATA RELEASE: 1-16. Release 1-3 used a different, preliminary aggregation formula.
AGGREGATION: The index is aggregated using this formula:
$v2x_partipdem =$
$.25 * v2x_polyarchy^{1.585} + .25 * v2x_partip + .5 * v2x_polyarchy^{1.585} * v2x_partip$

YEARS: 1789-2025

2.3.2.4 Deliberative Democracy Index (v2x_delibdem)

Long tag: vdem_cy_v2x_delibdem

Original tag: v2x_delibdem

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge et al. (2015), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the ideal of deliberative democracy achieved?
CLARIFICATION: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions—as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels—from preference formation to final decision—among informed and competent participants who are open to persuasion. To make it a measure of not only the deliberative principle but also of democracy, the index also takes the level of electoral

democracy into account.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xdl_delib v2x_polyarchy
DATA RELEASE: 1-16. Release 1-3 used a different, preliminary aggregation formula.
AGGREGATION: The index is aggregated using this formula:
$v2x_delibdem =$
$.25 * v2x_polyarchy^{1.585} + .25 * v2xdl_delib + .5 * v2x_polyarchy^{1.585} * v2xdl_delib$

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the ideal of egalitarian democracy achieved?
CLARIFICATION: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1 rights and freedoms of individuals are protected equally across all social groups; and 2 resources are distributed equally across all social groups; 3 groups and individuals enjoy equal access to power. To make it a measure of egalitarian democracy, the index also takes the level of electoral democracy into account.
SCALE: Interval, from low to high (0-1).

2.3.3 V-Dem Democracy Indices - V-Dem Mid-Level Indices: Components of the Democracy Indices

This section includes the V-Dem mid-level indices, subcomponents of the V-Dem Democracy Indices. Please see Appendix A of the V-Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.3.1 Additive polyarchy index (v2x_api)

Long tag: vdem_cy_v2x_api

Original tag: v2x_api

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Teorell et al. (2019), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the electoral principle of democracy achieved?
CLARIFICATION: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected directly or indirectly through elections.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_frassoc_thick v2x_suffr v2xel_frefair v2x_elecoff v2x_freexp_altinf
DATA RELEASE: 6-16.
AGGREGATION: The index is operationalized by taking the weighted average of the indices measuring freedom of association thick (v2x_frassoc_thick), clean elections (v2xel_frefair), freedom of expression (v2x_freexp_altinf), elected executive (v2x_elecoff), and suffrage (v2x_suffr). The weights are constructed so as to sum to 1 and weigh elected executive and suffrage half as much as the other three, respectively.
The index is aggregated using this formula:
$v2x_api = (1/4) * v2x_frassoc_thick + (1/4) * v2xel_frefair + (1/4) * v2x_freexp_altinf + (1/8) * v2x_elecoff + (1/8) * v2x_suffr$
COUNTRY-YEAR AGGREGATION: Day-weighted mean

QUESTION: To what extent is the electoral principle of democracy achieved?
CLARIFICATION: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected directly or indirectly through elections.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_frassoc_thick v2x_suffr v2xel_frefair v2x_elecoff v2x_freexp_altinf
DATA RELEASE: 6-16.
AGGREGATION: The electoral component index is operationalized as a chain defined by its weakest link. Specifically, the index is formed by multiplying indices measuring freedom of association thick (v2x_frassoc_thick), clean elections (v2xel_frefair), freedom of expression (v2x_freexp_altinf), elected executive (v2x_elecoff), and suffrage (v2x_suffr), or
v2x_mpi = v2x_frassoc_thick * v2xel_frefair * v2x_freexp_altinf * v2x_elecoff * v2x_suffr

QUESTION: What share of adult citizens as defined by statute has the legal right to vote in national elections?
CLARIFICATION: This question does not take into consideration restrictions based on age, residence, having been convicted for crime, or being legally incompetent. It covers legal *de jure* restrictions, not restrictions that may be operative in practice *de facto*. The adult population as defined by statute is defined by citizens in the case of independent countries or the people living in the territorial entity in the case of colonies. Universal suffrage is coded as 100percent. Universal male suffrage only is coded as 50percent. Years before electoral provisions are introduced are scored 0percent. The scores do not reflect whether an electoral regime was interrupted or not. Only if new constitutions, electoral laws, or the like explicitly introduce new regulations of suffrage, the scores were adjusted accordingly if the changes suggested doing so. If qualifying criteria other than gender apply such as property, tax payments, income, literacy, region, race, ethnicity, religion, and/or 'economic independence',

estimates have been calculated by combining information on the restrictions with different kinds of statistical information on population size, age distribution, wealth distribution, literacy rates, size of ethnic groups, etc., secondary country-specific sources, and — in the case of very poor information — the conditions in similar countries or colonies. The scores reflect *de jure* provisions of suffrage extension in percentage of the adult population. If the suffrage law is revised in a way that affects the extension, the scores reflect this change as of the calendar year the law was enacted.
RESPONSES:
Percent.
SCALE: Interval, from low to high (0-1).

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
QUESTION: Is the chief executive and legislature appointed through popular elections?
CLARIFICATION: This index attempts to measure (a) whether the chief executive is elected, either directly elected through popular elections or indirectly through a popularly elected legislature that then appoints the chief executive; and (b) whether the legislature, in presidential systems with a directly elected president that is also chief executive, is directly or indirectly elected. Note that a popular election is minimally defined and also includes sham elections with limited suffrage and no competition. Similarly, quot;appointmentquot; by legislature only implies selection and/or approval, not the power to dismiss. This index is useful primarily for aggregating higher-order indices and should not necessarily be interpreted as an important element of democracy in its own right.
SCALE: Interval.
SOURCE(S): v2ex_elechos v2ex_elechog v2exdfcbhs_rec v2ex_hosw v2xex_elecleg v2lgbicam v2lgello v2lgelecup v2lginello v2lginelup v2exaphos v2expathhs v2exaphogp v2expathhg v2exdjcbhg v2exdfdmhs v2exdfdshg v2exhoshog v2exapupap v2exapup
DATA RELEASE: 1-16. 1-3 preliminary aggregation formula, 4-6 as v2x_accex, 7 renamed to v2x_elecoff and modified aggregation, 8.
AGGREGATION: The index is formed in two steps. First, there are six different chains of appointment/selection to take into account in constructing this index, all of which are scaled to vary from 0 to 1. First, whether the head of state is directly elected ($a = 1$) or not ($a = 0$) (from v2ex_elechos). Second, the extent to which the legislature is popularly elected (b). If the legislature is unicameral, b is measured as the proportion of legislators directly elected + half of the proportion that are indirectly elected. If the legislature is bicameral and the upper house is involved in the appointment of the chief executive, the same proportion of directly and half of the indirectly elected legislators is calculated for the upper house; the scores for the lower and upper houses are then averaged. Third, whether the head of state is appointed

by the legislature, or the approval of the legislature is necessary for the appointment of the head of state ($c1 = 1$, otherwise 0). Fourth, whether the head of government is appointed by the legislature, or the approval of the legislature is necessary for the appointment of the head of government ($c2 = 1$, otherwise 0). Fifth, whether the head of government is appointed by the head of state ($d = 1$) or not ($d = 0$). Sixth, whether the head of government is directly elected ($e = 1$) or not ($e = 0$) (from v2ex_elechog).

In the second step, the extent to which the legislature is elected (b) is also independently taken into account in order to penalize presidential systems with unelected legislatures, or legislatures with a large share of presidential appointees, for example.

Define hosw as the weight for the head of state. If the head of state is also head of government (*v2exhoshog = 1*, $hosw = 1$). If the head of state has more power than the head of government over the appointment and dismissal of cabinet ministers, then $hosw = 1$; if the reverse is true, $hosw = 0$. If they share equal power, $hosw = .5$. Define the weight for the head of government as $hogw = 1 - hosw$. The formula then is:

$$v2x_elecoff = \&hosw \times \max(a, b \times c1) + hogw \times \max(a \times d, b \times c1 \times d, e, b \times c2),$$

unless the head of state is directly elected (*v2ex_elechos* = 1) and the chief executive (*v2ex_hosw* = 1), in case of which:

$$v2x_elecoff = \&[hosw \times \max(a, b \times c1) + hogw \times \max(a \times d, b \times c1 \times d, e, b \times c2) + b]/2)$$

QUESTION: To what extent is the liberal principle of democracy achieved?
CLARIFICATION: The liberal principle of democracy emphasizes the importance of

protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a quot;negativequot; view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xcl_rol v2x_jucon v2xlg_legcon v2lgbicam
DATA RELEASE: 1-16.
AGGREGATION: This index is formed by averaging the following indices: equality before the law and individual liberties (v2xcl_rol), judicial constraints on the executive (v2x_jucon), and legislative constraints on the executive (v2xlg_legcon). Prior to the calculation v2xlg_legcon gets set to 0 whenever v2lgbicam is 0.

QUESTION: To what extent is the participatory principle achieved?
CLARIFICATION: The participatory principle of democracy emphasizes active participation

by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies.
SCALE: Interval, from low to high (0-1).

ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: Are major CSOs routinely consulted by policymakers; how large is the involvement of people in CSOs; are women prevented from participating; and is legislative candidate nomination within party organization highly decentralized or made through party primaries?
CLARIFICATION: The sphere of civil society lies in the public space between the private sphere and the state. Here, citizens organize in groups to pursue their collective interests and ideals. We call these groups civil society organizations CSOs. CSOs include, but are by no means limited to, interest groups, labor unions, spiritual organizations if they are engaged in civic or political activities, social movements, professional associations, charities, and other non-governmental organizations.
The core civil society index CCSI is designed to provide a measure of a robust civil society, understood as one that enjoys autonomy from the state and in which citizens freely and actively pursue their political and civic goals, however conceived.
SCALE: Interval, from low to high (0-1).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): David Altman
QUESTION: To what extent is the direct popular vote utilized?
CLARIFICATION: Direct popular voting refers here to an institutionalized process by which citizens of a region or country register their choice or opinion on specific issues through a ballot. It is intended to embrace initiatives, referendums, and plebiscites, as those terms are usually understood. It captures some aspects of the more general concept of direct democracy at the national level. The term does not encompass recall elections, deliberative assemblies, or settings in which the vote is not secret or the purview is restricted. Likewise, it does not apply to elections for representatives.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2ddlexci v2ddsigpci v2ddsiglci v2ddsigdci v2ddpartci v2ddapprci v2ddspmci v2ddadmci v2ddyrci v2ddlexrf v2ddsigprf v2ddsigdrf v2ddpartrf v2ddapprrf v2ddspmrf v2ddadmrf v2ddyrrf v2ddpartpl v2ddapprpl v2ddspmpl v2ddadmpl v2ddlexpl v2ddyrpl v2ddlexor v2ddpartor v2ddappor v2ddspmor v2ddadmor v2ddyror v2ddthreor v2ddthrerf v2ddthrepl v2ddthreci
DATA RELEASE: 1-16. New aggregation formula in version 7.
AGGREGATION: This index results from the addition of the weighted scores of each type of popular votes studied (popular initiatives $\times 1.5$, referendums $\times 1.5$, plebiscites, and obligatory referendums). Each type of popular vote receives a maximum score of two resulting from the addition of two terms (easiness of initiation and easiness of approval), where each term obtains a maximum value of one. As we are studying four types of popular votes, the minimum value is 0, and the maximum is 8. In the v2xdd_dd all scores are normalized to range between 0 and 1. For an elaboration of the weighting factor of each component, see: Altman, David. 2017.

The index is aggregated using this formula:

$$v2xdd_dd = \&(v2xdd_i_ci) \times 1.5 + (v2xdd_i_rf) \times 1.5$$

$$\&+(v2xdd_i_pl) + (v2xdd_i_or)$$

Regarding each type of citizen initiated popular vote (i.e., popular initiative), the ease of initiation is measured by (a) the existence of a direct democracy process (v2ddlexci), (b) the number of signatures needed (v2ddsigpci), and (c) time-limits to circulate the signatures (v2ddsigdci). Easiness of approval is measured by the surface of the polygon determined by (a) participation quorum (v2ddsigdci), (b) approval quorum (v2ddpartci), and (c) supermajority (v2ddspmci). The resulting score is then multiplied with (d) district majority (v2ddadmci). Consequences are measured by (a) the legal status of the decision made by citizens (binding or merely consultative) (v2ddlexci), and (b) the frequency and degree of success with which direct popular votes have been held in the past (v2ddthreci). The index is aggregated using this formula:

$$v2xdd_dd = \&[(IF\ v2ddlexcigt; 0, 1, 0) \times (1 - (v2ddsigpci)) \times (IF\ v2dds$$

$$\&= 0, 1, .5 + (2 \times v2ddsigdci/365))+$$

$$\&(v2ddsigdci) \cap (v2ddpartci) \cap (v2ddspmci)]$$

$$\&\times(0.5 + ((100 - v2ddadmci)/100))/2]$$

$$\&\times(IF\ v2ddlexci = 2, 1, IF\ v2ddlexci = 1, 0.75, v2ddlexci = 0, 0)$$

$$\&\times(IF\ years\ since\ last\ successful\ eventlt; 6,$$

$$\& v2ddthreci = 1, afterwards\ decreases\ by\ 0.06\ units\ per\ year$$

$$\& until\ 0.1;\ if\ the\ event\ was\ not\ successful$$

$$\& during\ the\ first\ years\ v2ddapprci$$

$$\&= 0.9, afterwards\ decreases\ by\ 0.1\ units\ per\ year\ until\ 0.1)$$

In case the vote originates from above (i.e., authorities), there is no need to account for v2ddsigpci and v2ddsigdci. For an elaboration of the interaction among quorums, $(v2ddsigdci) \cap (v2ddpartci) \cap (v2ddspmci)$, see Altman, David. 2017.

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the deliberative principle of democracy achieved?
CLARIFICATION: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions—as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels—from preference formation to final decision—among informed and competent participants who are open to persuasion.
To measure these features of a polity we try to determine the extent to which political elites give public justifications for their positions on matters of public policy, justify their positions in terms of the public good, acknowledge and respect counter-arguments; and how wide the range of consultation is at elite levels.
SCALE: Interval, from low to high (0-1).

QUESTION: To what extent is the egalitarian principle achieved?
CLARIFICATION: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved

when (1) rights and freedoms of individuals are protected equally across all social groups; (2) resources are distributed equally across all social groups; and (3) access to power is equally distributed by gender, socioeconomic class and social group.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xeg_eqprotec v2xeg_eqaccess v2xeg_eqdr
DATA RELEASE: 1-16. Release 1-4 used a different, preliminary aggregation formula, 5-8 modified aggregation formula including v2xeg_eqaccess.
AGGREGATION: This index is formed by averaging the following indices: equal protection index (v2xeg_eqprotec), equal access index (v2xeg_eqaccess) and equal distribution of resources (v2xeg_eqdr).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Coppedge et al. QUESTION: How equal is the protection of rights and freedoms across social groups by the state?
CLARIFICATION: Equal protection means that the state grants and protects rights and freedoms evenly across social groups. To achieve equal protection of rights and freedoms, the state itself must not interfere in the ability of groups to participate and it must also take action to ensure that rights and freedoms of one social group are not threatened by the actions of another group or individual.
SCALE: Interval, from low to high (0-1).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How equal is access to power?
CLARIFICATION: The Equal Access subcomponent is based on the idea that neither the protections of rights and freedoms nor the equal distribution of resources is sufficient to ensure adequate representation. Ideally, all groups should enjoy equal *de facto* capabilities to participate, to serve in positions of political power, to put issues on the agenda, and to influence policymaking.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2pepwrgen v2pepwrsoc v2pepwrses

(2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How equal is the distribution of resources?
CLARIFICATION: This component measures the extent to which resources — both tangible and intangible — are distributed in society. An equal distribution of resources supports egalitarian democracy in two ways. First, lower poverty rates and the distribution of goods and services such as food, water, housing, education and healthcare ensure that all individuals are capable of participating in politics and government. In short, basic needs must be met in order for individuals to effectively exercise their rights and freedoms see, for example, Sen 1999, Maslow 1943. Second, high levels of resource inequality undermine the ability of poorer populations to participate meaningfully Aristotle, Dahl 2006. Thus, it is necessary to include not only measures of poverty and the distribution of goods and services, but also the levels of inequality in these distributions, and the proportion of the population who are not eligible for social services *i.e.* means-tests, particularistic distribution, etc.. This principle also implies that social or economic inequalities can translate into political inequalities, an issue addressed most notably by Walzer 1983, who argues that overlapping quot;spheresquot; of inequality are particularly harmful to society. To address these overlapping quot;spheresquot;, this component also includes measures of the distribution of power in society amongst different socio-economic groups, genders, etc.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2dlencmps v2dlunivl v2peedueq v2pehealth
DATA RELEASE: 5, 7-16. Release 7 modified: v2pepwrses, v2pepwrsoc and v2pepwrgen now form a separate subcomponent index.
AGGREGATION: The index is formed by taking the point estimates from a Bayesian factor analysis model of the indicators for particularistic or public goods v2dlencmps, means tested vs. universalistic welfare policies v2dlunivl, educational equality v2peedueq and health equality v2pehealth.

YEARS: 1900-2025
CONVERGENCE: Model parameters with convergence issues: intercept.

2.3.4 V-Dem Indicators - Elections

Instructions to the coders (as shown in the surveys) Elections: Among national elections we distinguish elections to: (i) the lower or unicameral chamber of the legislature (including constituent or constitutional assemblies), (ii) the upper chamber of the legislature, and (iii) the presidency. For present purposes an executive who is elected by a legislature is considered a *prime minister*, not a president. In order to be considered a *president*, an executive must, under

ordinary circumstances, be chosen directly by the electorate (perhaps mediated by an electoral college).

Non-election specific coding: The following questions are not election-specific and should be coded for every year from 1900 (or when applicable) to the present.

Election specific questions: The following questions pertain to specific national elections. The date of each election is pre-coded. In cases where more than one election is held on the same day(s), the questions in this section are for all elections taking place on that date. If you have coded for V-Dem in the past, your previous scores will be displayed in the survey. You are welcome to revise previously submitted scores in all surveys. For this section, we kindly ask you make sure that you have coded all election years.

Election specific questions – Historical clarification: The following questions pertain to specific national elections. National elections include elections to the presidency (if applicable) and legislature (lower and upper house, whatever applies), whether direct or indirect, as well as constituent assembly elections. It does not include other elections, *e.g.*, subnational elections, plebiscites, initiatives, referendums, or by-elections. The date of each election is pre-coded. In cases where more than one election is held on the same day(s), the questions in this section are for all elections taking place on that date."

Subnational elections and offices: This section of the survey asks a small number of questions about *subnational* elections and offices. You will be instructed to identify two subnational levels, referred to as "regional government" and "local government". Questions in this section should be answered for every year, rather than for specific elections.

Lower chamber election: The following questions pertain to specific lower chamber or unicameral legislative elections. The dates of these elections have been pre-coded.

Executive and legislative versions of Election specific variables

- In order to subset election specific variables for executive elections only (previously *_ex) – keep only those observations where v2xel_elecpres is 1.
- In order to subset election specific variables for legislative elections only (previously *_leg) – keep only those observations where v2xel_elecparl is 1.

2.3.4.1 Election type (v2eltype)

Long tag: vdem_cy_v2eltype

Original tag: v2eltype

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: What type of election was held on this date?
CLARIFICATION: Choose all that apply. Whenever possible, specify the exact date of each election. If the election unfolds across more than one day, enter the date for the first day. If the precise date is unavailable, enter the first of the month; if the month is unknown, enter January 1. Multiple-round elections (*e.g.*, two-round elections) are counted separately. (More than one election in a single year can be accommodated.)
RESPONSES:
0: Legislative; lower, sole, or both chambers, first or only round. (0=No, 1=Yes) [v2eltype_0]
1: Legislative, lower, sole, or both chambers, second round. (0=No, 1=Yes) [v2eltype_1]
2: Legislative, upper chamber only, first or only round. (0=No, 1=Yes) [v2eltype_2] (Not yet

coded)
3: Legislative, upper chamber only, second round. (0=No, 1=Yes) [v2eltype_3] (Not yet coded)
4: Constituent Assembly, first or only round. (0=No, 1=Yes) [v2eltype_4]
5: Constituent Assembly, second round. (0=No, 1=Yes) [v2eltype_5]
6: Presidential, first or only round. (0=No, 1=Yes) [v2eltype_6]
7: Presidential, second round. (0=No, 1=Yes) [v2eltype_7]
8: Metropolitan or supranational legislative, first or only round. (0=No, 1=Yes) [v2eltype_8] (Not yet coded)
9: Metropolitan or supranational legislative, second round. (0=No, 1=Yes) [v2eltype_9] (Not yet coded)
SCALE: Series of dichotomous scales.
ANSWER-TYPE: Multiple selection.
SOURCE(S): **?**; **?**; International Foundations for Electoral System (IFES) (2026); Marshall & Gurr (2020); **?**; **?**; **?**,
NOTES: All direct elections and elections by an electoral college that is elected by the people and has the sole purpose of electing an executive or members of parliament are coded. Note that single-party elections, elections held under limited suffrage and for only parts of a parliament, as well as elections of which the results are subsequently cancelled are included. Elections for constituent assemblies that come to perform functions beyond drafting and adopting a new constitution (*e.g.* legislating, electing president, adopting budget, etc) are also included and coded under category 0 and 1 (Legislative; lower, sole, or both chambers; first or second round). Direct elections for prime minister (*e.g.* Israel in 1996-2001) are coded under category 6. Excluded are elections that are not decisive, i.e. when the HOS alone is selecting the candidate(s). The variable includes elections where results were declared invalid after the fact, *e.g.* by a constitutional court, since they also provide information on the quality of democracy.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Election-specific dates.

Description:
VARIABLE TYPE: A

PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: What is the approximate percentage of enfranchised adults older than the minimal voting age?
CLARIFICATION: This question does not take into consideration restrictions based on age, residence, having been convicted for crime, being in the military service or being legally incompetent.
This variable, in contrast to v2elsuffrage, covers *de facto* enfranchised adults and not *de jure*. For example, the scores reflect whether an electoral regime was interrupted or not. If an electoral regime is interrupted (see v2x_elecreg), v2asuffrage is zero while v2elsuffrage may still be 100.
The adult population (as defined by statute) is defined by citizens in the case of independent countries or the people living in the territorial entity in the case of colonies.
RESPONSES:
Percent.
SCALE: Interval.

VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Are women eligible to vote in national elections?
CLARIFICATION: If there are no (direct) national elections, observations are not coded (missing).
RESPONSES:
0: No female suffrage. No women are allowed to vote, but some or all males vote.
1: Restricted female suffrage. Some women are allowed to vote, and face more or different restrictions than men
2: Universal female suffrage. All women are allowed to vote.
SCALE: Ordinal.
SOURCE(S): **?**; Paxton et al. (2025)
DATA RELEASE: 1-6, 10-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Election-specific dates (v2eltype).

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Megan Reif
QUESTION: What is the level of suffrage practiced?

CLARIFICATION: Note that this question applies to citizens only. Note also that we are interested in legal (*de jure*) restrictions, not restrictions that may be operative in practice (*de facto*). In cases where married people are allowed to vote at a younger age than single people, the higher (older) age minimum for single voters is given (see v2elage).
RESPONSES:
0: Indirect suffrage and/or offices filled by appointment only
1: Propertied ethnic males
2: Ethnic males
3: Propertied/educated males
4: Ethnic males and females
5: Propertied/educated males and females
6: All males
7: Spatially variant
8: Universal
9: Occupational categories/Party membership
10: Only citizens of colonial metropole
11: Propertied/tax-paying colons and non-colons
12: Propertied males and military females
13: Propertied/landowning households
14: All households
15: All males and married females
16: Age differential: Married people vote at younger age than single
SCALE: Nominal.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Svend-Erik Skaaning
QUESTION: What percentage (percent) of adult citizens (as defined by statute) has the legal

right to vote in national elections?
CLARIFICATION: This question does not take into consideration restrictions based on age, residence, having been convicted for crime, being in the military service or being legally incompetent. It covers legal (*de jure*) restrictions, not restrictions that may be operative in practice (*de facto*). The adult population (as defined by statute) is defined by citizens in the case of independent countries or the people living in the territorial entity in the case of colonies.
Universal suffrage is coded as 100percent. Universal male suffrage is only coded as 50percent. Years before electoral provisions are introduced are scored 0percent. The scores do not reflect whether an electoral regime was interrupted or not. Only if new constitutions, electoral laws, or the like explicitly introduce new regulations of suffrage, the scores were adjusted accordingly if the changes suggested doing so. If qualifying criteria other than gender apply (such as property, tax payments, income, literacy, region, race, ethnicity, religion, and/or 'economic independence'), estimates have been calculated by combining information on the restrictions with different kinds of statistical information (on population size, age distribution, wealth distribution, literacy rates, size of ethnic groups, etc.), secondary country-specific sources, and — in the case of very poor information — the conditions in similar countries or colonies.
The scores reflect *de jure* provisions of suffrage extension in percentage of the adult population. If the suffrage law is revised in a way that affects the extension, the scores reflect this change as of the calendar year the law was enacted.
RESPONSES:
Percent.
SCALE: Interval.
SOURCE(S): **?**; **?**; Elkins & Ginsburg (2025); **?**; **?**; **?**, country-specific sources.
NOTES: In Version 3 of the dataset this variable was re-coded from scratch based on the modified criteria reflected in the clarification section (above).
DATA RELEASE: 1-16.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Were there allegations of significant vote-fraud by any Western monitors?

CLARIFICATION: quot;Western monitorsquot; refers to monitors from Western countries (as defined by OECD membership) or Western international organizations. Fraud allegations are not required to include the word quot;fraudquot;. Other forms of electoral malpractice like vote-buying are considered forms of fraud for the purposes of this question, as are any allegations of significant manipulation that undermine the credibility of the electoral process. If there were no Western monitors, this variable is coded as missing.
RESPONSES:
0: No/Unclear
1: Yes
SOURCE(S): **?**, reports by international election monitors.
DATA RELEASE: 5-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Election-specific dates (v2eltype).

QUESTION: Are there disclosure requirements for donations to national election campaigns?
RESPONSES:
0: No. There are no disclosure requirements.
1: Not really. There are some, possibly partial, disclosure requirements in place but they are not observed or enforced most of the time.
2: Ambiguous. There are disclosure requirements in place, but it is unclear to what extent they are observed or enforced.
3: Mostly. The disclosure requirements may not be fully comprehensive (some donations not covered), but most existing arrangements are observed and enforced.
4: Yes. There are comprehensive requirements and they are observed and enforced almost all the time.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is significant public financing available for parties' and/or candidates'

campaigns for national office?
RESPONSES:
0: No. Public financing is not available.
1: Little. There is public financing but it is so small or so restricted that it plays a minor role in most parties' campaigns.
2: Ambiguous. There is some public financing available but it is unclear whether it plays a significant role for parties.
3: Partly. Public financing plays a significant role in the campaigns of many parties.
4: Yes. Public financing funds a significant share of expenditures by all, or nearly all parties.

QUESTION: Does the Election Management Body (EMB) have autonomy from government to apply election laws and administrative rules impartially in national elections?
CLARIFICATION: The EMB refers to whatever body (or bodies) is charged with administering national elections.
RESPONSES:
0: No. The EMB is controlled by the incumbent government, the military, or other *de facto* ruling body.
1: Somewhat. The EMB has some autonomy on some issues but on critical issues that influence the outcome of elections, the EMB is partial to the *de facto* ruling body.
2: Ambiguous. The EMB has some autonomy but is also partial, and it is unclear to what extent this influences the outcome of the election.
3: Almost. The EMB has autonomy and acts impartially almost all the time. It may be influenced by the *de facto* ruling body in some minor ways that do not influence the outcome

of elections.
4: Yes. The EMB is autonomous and impartially applies elections laws and administrative rules.

QUESTION: Does the Election Management Body (EMB) have sufficient staff and resources to administer a well-run national election?
CLARIFICATION: The EMB refers to whatever body (or bodies) is charged with administering national elections.
RESPONSES:
0: No. There are glaring deficits in staff, financial, or other resources affecting the organization across the territory.
1: Not really. Deficits are not glaring but they nonetheless seriously compromised the organization of administratively well-run elections in many parts of the country.
2: Ambiguous. There might be serious deficiencies compromising the organization of the election but it could also be a product of human errors and co-incidence or other factors outside the control of the EMB.
3: Mostly. There are partial deficits in resources but these are neither serious nor widespread.
4: Yes. The EMB has adequate staff and other resources to administer a well-run election.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Was this national election multiparty?
RESPONSES:
0: No. No-party or single-party and there is no meaningful competition (includes situations where a few parties are legal but they are all *de facto* controlled by the dominant party).
1: Not really. No-party or single-party (defined as above) but multiple candidates from the same party and/or independents contest legislative seats or the presidency.
2: Constrained. At least one real opposition party is allowed to contest but competition is highly constrained — legally or informally.
3: Almost. Elections are multiparty in principle but either one main opposition party is prevented (*de jure* or *de facto*) from contesting, or conditions such as civil unrest (excluding natural disasters) prevent competition in a portion of the territory.
4: Yes. Elections are multiparty, even though a few marginal parties may not be permitted to contest (*e.g.* far-right/left extremist parties, anti-democratic religious or ethnic parties).
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, was there a reasonably accurate voter registry in place and was it used?
RESPONSES:
0: No. There was no registry, or the registry was not used.
1: No. There was a registry but it was fundamentally flawed (meaning 20percent or more of eligible voters could have been disenfranchised or the outcome could have been affected significantly by double-voting and impersonation).
2: Uncertain. There was a registry but it is unclear whether potential flaws in the registry had much impact on electoral outcomes.
3: Yes, somewhat. The registry was imperfect but less than 10percent of eligible voters may have been disenfranchised, and double-voting and impersonation could not have affected the results significantly.
4: Yes. The voter registry was reasonably accurate (less than 1percent of voters were affected by any flaws) and it was applied in a reasonable fashion.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In this national election, was there evidence of vote and/or turnout buying?
CLARIFICATION: Vote and turnout buying refers to the distribution of money or gifts to individuals, families, or small groups in order to influence their decision to vote/not vote or whom to vote for. It does not include legislation targeted at specific constituencies, i.e. quot;porkbarrelquot; legislation.
RESPONSES:
0: Yes. There was systematic, widespread, and almost nationwide vote/turnout buying by almost all parties and candidates.
1: Yes, some. There were non-systematic but rather common vote-buying efforts, even if only in some parts of the country or by one or a few parties.
2: Restricted. Money and/or personal gifts were distributed by parties or candidates but these offerings were more about meeting an 'entry-ticket' expectation and less about actual vote choice or turnout, even if a smaller number of individuals may also be persuaded.
3: Almost none. There was limited use of money and personal gifts, or these attempts were limited to a few small areas of the country. In all, they probably affected less than a few percent of voters.
4: None. There was no evidence of vote/turnout buying.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: In this national election, was there evidence of other intentional irregularities by incumbent and/or opposition parties, and/or vote fraud?
CLARIFICATION: Examples include use of double IDs, intentional lack of voting materials, ballot-stuffing, misreporting of votes, and false collation of votes. This question does not refer to lack of access to registration, harassment of opposition parties, manipulations of the voter registry or vote-buying (dealt with in previous questions).
RESPONSES:
0: Yes. There were systematic and almost nationwide other irregularities.
1: Yes, some. There were non-systematic, but rather common other irregularities, even if only in some parts of the country.
2: Sporadic. There were a limited number of sporadic other irregularities, and it is not clear whether they were intentional or disfavored particular groups.
3: Almost none. There were only a limited number of irregularities, and many were probably unintentional or did not disfavor particular groups' access to participation.
4: None. There was no evidence of intentional other irregularities. Unintentional irregularities resulting from human error and/or natural conditions may still have occurred.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, were opposition candidates/parties/campaign workers subjected to repression, intimidation, violence, or harassment by the government, the ruling party, or their agents?
CLARIFICATION: Other types of clearly distinguishable civil violence, even if politically motivated, during the election period should *not* be factored in when scoring this indicator (it is dealt with separately).
RESPONSES:
0: Yes. The repression and intimidation by the government or its agents was so strong that the entire period was quiet.
1: Yes, frequent: There was systematic, frequent and violent harassment and intimidation of the opposition by the government or its agents during the election period.
2: Yes, some. There was periodic, not systematic, but possibly centrally coordinated — harassment and intimidation of the opposition by the government or its agents.
3: Restrained. There were sporadic instances of violent harassment and intimidation by the government or its agents, in at least one part of the country, and directed at only one or two local branches of opposition groups.
4: None. There was no harassment or intimidation of opposition by the government or its agents, during the election campaign period and polling day.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In this national election, was the campaign period, election day, and post-election process free from other types not by the government, the ruling party, or their agents) of violence related to the conduct of the election and the campaigns (but not conducted by the government and its agents)?
RESPONSES:
0: No. There was widespread violence between civilians occurring throughout the election period, or in an intense period of more than a week and in large swaths of the country. It resulted in a large number of deaths or displaced refugees.
1: Not really. There were significant levels of violence but not throughout the election period or beyond limited parts of the country. A few people may have died as a result, and some people may have been forced to move temporarily.
2: Somewhat. There were some outbursts of limited violence for a day or two, and only in a small part of the country. The number of injured and otherwise affected was relatively small.
3: Almost. There were only a few instances of isolated violent acts, involving only a few people; no one died and very few were injured.
4: Peaceful. No election-related violence between civilians occurred.
SCALE: Ordinal, converted to interval by the measurement model.

(2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Staffan I. Lindberg
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Taking all aspects of the pre-election period, election day, and the post-election process into account, would you consider this national election to be free and fair?
CLARIFICATION: The only thing that should *not* be considered in coding this is the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (an issue measured separately).
RESPONSES:
0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (*i.e.*, who became president; or who won the legislative majority).
1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the election (*i.e.*, who became president; or who won the legislative majority).
2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome or not (as defined above).
3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularities but these did not in the end affect the outcome (as defined above).
4: Yes. There was some amount of human error and logistical restrictions but these were largely unintentional and without significant consequences.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates (v2eltype).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Following this national election, did winners assume office according to prescribed constitutional rules and norms?
RESPONSES:
0: No. The official winner of the election was prevented from assuming office by *unconstitutional* means.
1: Partially. The official winner/winning party or largest vote-getter was forced at least in part by unconstitutional means to share power, or delay assuming power for more than 6 months.
2: Yes. Constitutional rules and norms were followed and the official winner/winning party or largest vote-getter assumed office accordingly (or continued in office).
SCALE: Ordinal, converted to interval by the measurement model.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Pamela Paxton
QUESTION: In this national election, what percentage (percent) of the adult voting-age population cast a vote according to official results?
CLARIFICATION: The VAP can reflect irregularities such as problems with the voters' register or registration system. VAP numbers are estimates since they do not take into account legal or systemic barriers to the exercise of the franchise or account for non-eligible members of the population. Thus, it can occur that VAP values surpass 100 which is not an error but reflects such conditions.
RESPONSES:
Percent.
SCALE: Interval.
SOURCE(S): **?** (VAP figures are estimates and should be treated as such).
NOTES: In cases where executive and legislative elections were held on the same day but there is a different VAP turnout for each election, the VAP turnout for this date is coded for the executive elections only. The VAP turnout data for the legislative elections, in these

cases, can be found in the IDEA Voter turnout database (see references).

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Was there turnover in the office of the head of government (HOG) as a result of this national election?
CLARIFICATION: Turnover can occur in presidential, semi-presidential, as well as parliamentary systems, and it refers not only to the individual person holding office but also to that person's party. If the HOS and HOG are the same person, the coding is the same for the two variables. The second round of election is coded as the first.
RESPONSES:
0: No. The head of government- retained his/her position either as a result of the outcome of the election, or because the elections do not affect the HOG.
1: Half. The head of government is a different individual than before the election but from the same party that was in power before the election, or a new independent candidate is elected. In parliamentary systems this code applies when the head of government changes as an effect of alternations in the ruling coalition, changes in party leadership.
2: Yes. The executive(s) - head of state and head of government- lost their position(s) as a result of the outcome of the election. In presidential systems this code applies when the new president is both a different person and from a different party than before the election or an independent candidate is elected. In parliamentary systems the ruling party or coalition of parties lost and the new head of government is from a different party or from a new coalition. This code also applies if this is the first head of government elected for a newly (semi-) independent state country.
SCALE: Ordinal.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Was there turnover in the office of the head of state (HOS) as a result of this national election?
CLARIFICATION: Turnover can occur in presidential, semi-presidential, as well as parliamentary systems, and it refers not only to the individual person holding office but also to that person's party.
RESPONSES:
0: No. The head of state retained their position either as a result of the outcome of the election, or because the elections do not affect the HOS.
1: Half. The head of state is a different individual than before the election but from the same party that was in power before the election, or a new independent candidate is elected.
2: Yes. The head of state lost their position(s) as a result of the outcome of the election. In presidential systems this code applies when the new president is both a different person and from a different party than before the election or an independent candidate is elected. This code also applies if this is the first head of state elected for a newly (semi-) independent state country.
SCALE: Ordinal.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Was there turnover in the executive office as a result of this national election?
CLARIFICATION: Turnover in the executive can occur in presidential, semi-presidential, as well as parliamentary systems, and it refers not only to the individual person holding office but also to that person's party. This question considers whether turnover occurs both in the office of head of state and head of government, even if one of the positions is not contested in the particular elections.
RESPONSES:
0: No. The executive(s) — head of state and head of government — retained their position either as a result of the outcome of the election, or because the elections do not affect the executive.
1: Half. The head of state or head of government is a different individual than before the election but from the same party (or independent) that was in power before the election. In parliamentary systems this code applies when the head of government changes as an effect of alternations in the ruling coalition, changes in party leadership, or a new independent head of government. In semi-presidential regimes, this code applies when the elections result in co-habitation after a period when one party (or independent) has held both offices, or if one of the executive office holders — the head of state or head of government changes, while the other retains their position.
2: Yes. The executive(s) — head of state and head of government — lost their position(s) as a result of the outcome of the election. In presidential systems this code applies when the new president is both a different person and from a different party (or independent) than before the election. In parliamentary systems the ruling party or coalition of parties lost and the new head of government is from a different party or from a new coalition. In semi-presidential regimes, this code applies when one party holds both the office of the head of state and head of government after a period of co-habitation, or if the holders of both offices change in terms of person and party (or independent) in the same election. This code also applies if this is the first head of state and/or head of government elected for a newly (semi-) independent state country.
SCALE: Ordinal.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg, Carl Henrik Knutsen, Jan Teorell
QUESTION: What was the electoral system used in this election for the lower or unicameral chamber of the legislature?
CLARIFICATION: Mixed majoritarian systems were coded as a two-round system. Regarding multi-member districts we coded list PR with large multi-member districts when the mean district size = 7. Constituent Assembly elections are excluded from the coding, since they often use specifically designed electoral systems. Further information on the following electoral system types can be found in Reynolds/Reilly, *The New International IDEA Handbook* (2005), chapter two and Annex B (Glossary of Terms) — downloadable, free

of charge, at www.idea.int/publications/esd/.
RESPONSES:
0: First-past-the-post (FPP, aka plurality) in single-member constituencies. The candidate with the most votes wins the seat.
1: Two-round system in single-member constituencies. Like FPP except that a threshold — usually 50percent + 1 — is required to avoid a runoff between the two top vote-getters.
2: Alternative vote in single-member districts. Voters rank-order their preferences for the candidates who compete for a single seat. If any candidate receives an absolute majority of first preferences, s/he is elected.
If not, then the least successful candidates (based on first-preferences) are eliminated and their votes reallocated to the second-preferences. This process is repeated until a candidate reaches 50percent +1 of the votes.
3: Block vote in multi-member districts. Electors have as many votes as there are seats within that district and can rank-order them (within or across parties) as they please.
4: Party block vote in multi-member districts. Voters cast a vote for a single party (but not for individual candidates within the party's list). The party with the most votes (*i.e.*, a plurality) wins all the seats in that district.
5: Parallel (SMD/PR). Some seats are in single-member districts (allocated by FPP or two-round electoral rules) and other seats are in multimember districts (allocated by some form of PR). These districts are overlapping, meaning that each elector votes twice: once in the single-member district race and once in the multi-member district race. Results are independent.
6: Mixed-member proportional (SMD with PR compensatory seats). Some seats are in single-member districts (allocated by FPP or two-round electoral rules) and other seats are in multimember districts (allocated by some form of PR). These districts are overlapping, meaning that each elector votes twice: once in the single-member district race and once in the multi-member district race. Results are not independent. Specifically, the multimember seats are used to rectify disproportionalities achieved in the single-member district election — by adding seats, as necessary.
This means that the representation of parties in the legislature is determined entirely by the PR ballot. It also means that the result of an MMP election is similar to the result of a PR election: parties achieve representation according to their nationwide vote share (on the PR ballot).
7: List PR with small multi-member districts (mean district size lt; 7). Each party presents a list of candidates for election within a district. Electors vote for a party, and parties receive seats in (rough) proportion to their overall share of the vote. Mean district size is less than seven.
8: List PR with large multi-member districts (mean district size gt; 7). Each party presents a list of candidates for election within a district. Electors vote for a party, and parties receive seats in (rough) proportion to their overall share of the vote. Mean district size is greater than seven.
9: Single-transferable vote (STV) in multi-member districts. Electors rank-order candidates nominated for a district. Candidates that surpass a specified quota of first-preference votes are elected. The remaining seats are chosen by reallocating the votes of the least successful candidates to elector's second- (or third-) preferences until the specified quota is reached. This process is repeated until all seats for that district are filled.
10: Single non-transferable vote (SNTV) in multi-member districts. Each elector chooses a single candidate. The candidates with the most votes (a plurality) win. (The number of winners is of course determined by the size of the district.)
11: Limited vote in multi-member districts.
Electors have more than one vote but fewer votes than the number of seats in the district. The candidates with the most votes (a plurality) win. (The number of winners is of course determined by the size of the district.)
12: Borda Count in single- or multi-member districts. Electors use numbers to mark preferences among candidates and each preference is assigned a value. For example, in a ten-candidate field a first preference is worth one, a second preference is worth .9, and so forth. These are summed and the candidate(s) with the highest total(s) is/are elected.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Allen Hicken
QUESTION: For this election, what was the statutory threshold (percent share of votes) that a party needed to obtain in order to gain representation in the lower (or unicameral) chamber of the legislature?
CLARIFICATION: In cases where thresholds are applied at a regional level, and in cases of mixed electoral systems where a threshold is applied in more than one tier, the threshold that applies to the most seats should be considered. If there are separate thresholds for individual parties and coalitions, code the threshold pertaining to parties. If there is no statutory threshold, enter 0. Leave this question blank if election was nonpartisan, *i.e.*, no parties (not even pro-government parties) were allowed.
RESPONSES:
Percent.
SCALE: Interval.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Last
DATE SPECIFIC: Lower chamber election dates (v2eltype_0, v2eltype_1)
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning,

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg
QUESTION: Did control of the lower (or unicameral) chamber of the legislature change as a result of this election, according to official results?
RESPONSES:
0: No. The majority party or ruling coalition includes the same or substantially the same parties, even if some minor parties (holding less than 10 percent of the seats in the legislature) left or joined the coalition, or because the elections do not affect the lower chamber.
1: Half. A minority party or coalition who was not in control of the chamber before the elections assumed the leading position in the legislature but is dependent on other parties for support. Or, a post-election ruling coalition includes some old parties and some new parties and the new parties represent more than 10 percent of the seats in the legislature.
2: Yes. The incumbent party or coalition lost its majority or plurality-dominant position in the legislature and a different party or coalition assumes the majority position.
SCALE: Ordinal.
SOURCE(S): V-Dem country coordinators; **?**; **?**, **?**; **?**; **?**; International Foundations for Electoral System (IFES) (2026).

Description:

VARIABLE TYPE: A,C
PROJECT MANAGER(S): Kelly McMann
QUESTION: Is there a regional government?
CLARIFICATION: Regional government is typically the second-highest level of government, just below the national government. There are many names for units at this level; some common ones are regions, provinces, states, departments, and cantons.
Countries with more than two subnational levels may have multiple levels that fit the definition of regional government. If this is the case, for all questions about regional government please code the regional level that, in practice, has the most responsibilities (*e.g.* making laws, providing primary, education, maintaining roads, policing, etc.) and resources to carry out those responsibilities.
Some countries are so small that, now or in earlier time periods, they have only local government and not regional government. If this is the case, please code this question as quot;0quot; for the appropriate time period.
If you have questions about identifying the regional government for your country, please send an email inquiry to your V-Dem contact.
RESPONSES:
0: No.
1: Yes.
ORDERING: If coded quot;0quot; for entire period, skip the following questions focused on regional government.
SCALE: Dichotomous.
SOURCE(S): Country expert coding (C data).
NOTES: Converted from (C) to (A (C)) coding as of December 2014. The part of the time series coming from Historical V-Dem is of variable type A*.

Description:

VARIABLE TYPE: A,C
PROJECT MANAGER(S): Kelly McMann
QUESTION: At the regional level, are government offices elected in practice?

CLARIFICATION: quot;Government officesquot; here refers to a regional executive and a regional assembly, *not* a judiciary and *not* minor bureaucrats. An *executive* is a single individual (or a very small group) (*e.g.*, a governor). An *assembly* is a larger body of officials, who may be divided into two chambers.
quot;Electedquot; refers to offices that are directly elected by citizens or indirectly elected by a regional elected assembly. All other methods of obtaining office — including appointment by higher or lower levels of government — are considered to be *non-elected*.
In classifying a position as elected one is making no judgments about the freeness/fairness of the election or the relative extent of suffrage. One is simply indicating that there is an election and that the winner of that election (however conducted) generally takes office.
RESPONSES:
0: Generally, offices at the regional level are not elected.
1: Generally, the regional executive is elected but not the assembly.
2: Generally, the regional assembly is elected but not the executive.
3: Generally, the regional executive is elected and there is no assembly.
4: Generally, the regional assembly is elected and there is no executive.
5: Generally, the regional executive and assembly are elected.
SCALE: Nominal.
SOURCE(S): Country expert coding (C data).
NOTES: Converted from (C) to (A (C)) coding as of December 2014. The part of the time series coming from Historical V-Dem is of variable type A*.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How would you characterize the relative power, in practice, of elected and

non-elected offices at the regional level?
CLARIFICATION: We are concerned with the relative power of regional offices to each other, *not* the power of regional offices relative to higher or lower levels of government.
Please consider only major offices, such as the executive, assembly, and judiciary, *not* those of minor bureaucrats. (A body of government officials, such as an assembly or judiciary, counts as one office.)
An office is "subordinate" if its officeholders can be chosen and removed by another office or if its decisions can be blocked or modified by another office, but it cannot similarly constrain the other office.
RESPONSES:
0: All or nearly all elected offices are subordinate to non-elected offices at the regional level.
1: Some elected offices are subordinate to non-elected offices at the regional level.
2: Elected and non-elected offices are approximately equal in power at the regional level.
3: Most non-elected offices are subordinate to elected offices at the regional level.
4: All or nearly all non-elected offices are subordinate to elected offices at the regional level.

QUESTION: How would you characterize the relative power, in practice, of elected and non-elected offices at the local level?
CLARIFICATION: We are concerned with the relative power of local offices to *each other*, not the power of local offices relative to higher levels of government.
Please consider only major offices, such as the executive, assembly, and judiciary, *not* those of minor bureaucrats. (A body of government officials, such as an assembly or judiciary, counts as one office.)
An office is "subordinate" if its officeholders can be chosen and removed by another office or if its decisions can be blocked or modified by another office, but it cannot similarly constrain the other office.
RESPONSES:
0: All or nearly all elected offices are subordinate to non-elected offices at the local level.
1: Some elected offices are subordinate to non-elected offices at the local level.
2: Elected and non-elected offices are approximately equal in power at the local level.
3: Most non-elected offices are subordinate to elected offices at the local level.
4: All or nearly all non-elected offices are subordinate to elected offices at the local level.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Taking all aspects of the pre-election period, election day, and the post-election process into account, would you consider subnational elections (regional and local, as previously identified) to be free and fair on average?
CLARIFICATION: This question refers to subnational levels that have elected offices and elections. It does not refer to subnational levels without elected offices and elections. If there were no subnational elections in any of the years covered in this survey, choose option 5.
quot;Free and fairquot; refers to all aspects of the election process *except* the extent of suffrage (by law). Thus, a free and fair election may occur even if the law excludes significant groups (we measure that issue separately).
RESPONSES:
0: No, not at all. The elections were fundamentally flawed and the official results had little if anything to do with the 'will of the people' (who won office).
1: Not really. While the elections allowed for some competition, the irregularities in the end affected the outcome of the elections (who won office).
2: Ambiguous. There was substantial competition and freedom of participation but there were also significant irregularities. It is hard to determine whether the irregularities affected the outcome or not (who won office).
3: Yes, somewhat. There were deficiencies and some degree of fraud and irregularities but these did not in the end affect the outcome (who won office).
4: Yes. There was some amount of human error and logistical restrictions but these were largely unintentional and without significant consequences.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;5quot; is recoded as a separate variable (v2elffelrbin).
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Are subnational elections held?
RESPONSES:
0: No.
1: Yes.
SCALE: Dichotomous, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;5quot; from variable v2elffelr is recoded as a separate variable (v2elffelrbin). If a coder chose the 5th category in the original question, it receives 0 in the new quot;v2elffelrbinquot; variable (corresponding to the answer, no, there were no subnational elections); otherwise it receives 1 (yes, there are subnational elections held). The resulting series of 0-1 country-coder time-series is run in the measurement model, which calculates the final value of v2elffelrbin while taking into account background coder characteristics.
DATA RELEASE: 3-16.

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Inter-Parliamentary Union (IPU) (2025), International Foundations for Electoral System (IFES) (2026)

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Allen Hicken
QUESTION: For this election, what was the district effective magnitude for seats in the lower

(or unicameral) chamber of the legislature?

CLARIFICATION: We have used different calculations to find the lower chamber election district effective magnitude value, depending on the electoral system. In electoral systems with reserved seats, reserved seats are treated as a second tier in a hybrid system. Effective magnitude is calculated separately for reserved seats. Effective magnitude in such systems is the weighted average where the weight is the proportion of seats allocated in each tier.

- Systems with only one tier: {[v2ellodiseff = $\overline{\mathrm{S}_{Eb\{]}}$
- Non-parallel systems (v2elloelsy $\neq$ 5) with more than one tier: {[v2ellodiseff = $\overline{2.5^{(6\times t)} \times B^2_{Eb\times S\{]}}$
- Parallel systems (v2elloelsy = 5) with more than one tier: {[v2ellodiseff = $\overline{\sqrt{\left(2.5^{(6\times t)} \times \frac{B^2}{Eb}\right) \times (Eb + t \times S)}_{S\{]}}$
- Hybrid systems (electoral rules differ geographically): {[v2ellodiseff = $\overline{\mathrm{S}_{Eb\{]}}$

  Formula key:

  - S = number of seats in the lower chamber (v2elloseat)
  - B = number of seats allocated in the 'base' tier (v2ellobaseat)
  - Eu = number of electoral districts in the 'upper' tier(s) (v2elloupdis)
  - Eb = total number of districts (v2ellobadis + v2elloupdis)
  - t = $\frac{S-B}{S}$ = the share of seats allocated in the 'upper' tier(s)

RESPONSES:
Numeric.
SCALE: Interval.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Allen Hicken
QUESTION: In this election, how many reserved seats were there, either in the 'base' or in the 'upper' tier?
CLARIFICATION: This variable refers to hybrid (or split) electoral systems where electoral rules differ geographically. In such systems, we treat the reserved seats as a second tier, compute an eff_M for them separately and take the weighted average (where the weight is the proportion of S allocated in each tier). Leave this question blank if the election was nonpartisan, i.e., no parties (not even pro-government parties) were allowed. We only consider seats that are filled by popular elections and are reserved for minorities with regards to ethnicity, religion, or social group. We do not consider seats filled by appointment, or quotas (e.g. gender quotas). We do not consider non-elected or non-voting seats.

2.3.5 V-Dem Indicators - Political Parties

Instructions to the coders (as shown in the surveys)

Political parties:

A "political party" refers to an organization that nominates candidates for public office. A party may refer to a longstanding coalition such as the CDU/CSU in Germany if that coalition functions in most respects like a single party. Sometimes, the identity of a party is obscured by name changes. However, if the party/coalition changes names but retains key personnel and is still run by and for the same constituency then it should be considered the same organization. Our notion of a party includes loose factional groupings such as the Tories and Whigs in the 19th-century Britain or the Caps and Hats in 18th-century Sweden. Unless stated otherwise the following questions pertain to parties that compete for seats in the national legislature or for the presidency.

Most of the questions in the following section ask you to generalize across parties in a particular country (and at a particular point in time). We realize that practices vary from party to party; these are, after all, highly diverse organizations. However, for our purposes it is important to consider what the most common practices are.

In answering these questions it is sometimes important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens on the ground). In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues wherever you see them. And if there is no clarification of the issue, assume that the question is referring to practices rather than formal rules.

2.3.5.1 Barriers to parties (v2psbars)

Long tag: vdem_cy_v2psbars

Original tag: v2psbars

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. PROJECT MANAGER(S): Allen Hicken
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How restrictive are the barriers to forming a party?
CLARIFICATION: Barriers include legal requirements such as requirements for membership or financial deposits, as well as harassment.
RESPONSES:
0: Parties are not allowed.
1: It is impossible, or virtually impossible, for parties not affiliated with the government to form (legally).
2: There are significant obstacles (*e.g.* party leaders face high levels of regular political harassment by authorities).
3: There are modest barriers (*e.g.* party leaders face occasional political harassment by authorities).
4: There are no substantial barriers.
ORDERING: If your answer is 1-4, proceed to the next question [v2psoppaut]. If your answer is 0, skip to the question about Party organization [v2psorgs].
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are any parties banned?
CLARIFICATION: This does not apply to parties that are barred from competing for failing to meet registration requirements or support thresholds.
RESPONSES:
0: Yes. All parties except the state-sponsored party (and closely allied parties) are banned.
1: Yes. Elections are non-partisan or there are no officially recognized parties.
2: Yes. Many parties are banned.
3: Yes. But only a few parties are banned.
4: No. No parties are officially banned.
ORDERING: If your answer is 4, skip the next question [v2psbantar].
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Among the major parties, what is the main or most common form of linkage to their constituents?
CLARIFICATION: A party-constituent linkage refers to the sort of quot;goodquot; that the party offers in exchange for political support and participation in party activities.
RESPONSES:
0: Clientelistic. Constituents are rewarded with goods, cash, and/or jobs.
1: Mixed clientelistic and local collective.
2: Local collective. Constituents are rewarded with local collective goods, *e.g.*, wells, toilets, markets, roads, bridges, and local development.
3: Mixed local collective and policy/programmatic.
4: Policy/programmatic. Constituents respond to a party's positions on national policies, general party programs, and visions for society.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: How many political parties with representation in the national legislature or presidency have publicly available party platforms (manifestos) that are publicized and relatively distinct from one another?
CLARIFICATION: In order to be counted in the affirmative, parties must have platforms that are both distinct (either in terms of content or generalized ideology) and publicly disseminated.
This question is *not* intended to measure how much the public actually knows about these platforms or whether they are important in structuring policymaking.
RESPONSES:
0: None, or nearly none.
1: Fewer than half.
2: About half.
3: More than half.
4: All, or nearly all.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

PROJECT MANAGER(S): Allen Hicken
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How centralized is legislative candidate selection within the parties?
CLARIFICATION: The power to select candidates for national legislative elections is often divided between local/municipal party actors, regional/state-level party organizations, and national party leaders. One level usually dominates the selection process, while sometimes candidate selection is the outcome of bargaining between the different levels of party organization.
RESPONSES:
0: National legislative candidates are selected exclusively by national party leaders.
1: National legislative candidate selection is dominated by national party leaders but with some limited influence from local or state level organizations.
2: National legislative candidates are chosen through bargaining across different levels of party organization.
3: National legislative candidates are chosen by regional or state-level organizations, perhaps with some input from local party organizations or constituency groups.
4: National legislative candidates are chosen by a small cadre of local or municipal level actors.
5: National legislative candidates are chosen by constituency groups or direct primaries.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

PROJECT MANAGER(S): Allen Hicken
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How unified is party control of the national government?
CLARIFICATION: With respect to the executive, consider only those offices that have effective power over policymaking. (If there is a monarch or president with very little policymaking power, this office should not be considered.) With respect to bicameral legislatures, consider only the chamber, or chambers, that have effective policymaking power. (If the upper chamber is inactive or clearly subordinate, consider only the lower chamber.) Leave this question blank if election was nonpartisan, *i.e.*, no parties (not even pro-government parties) were allowed.
RESPONSES:
0: Unified coalition control. A single multi-party coalition controls the executive and legislative branches of the national government. (This is true almost by definition in a

parliamentary system where a single coalition gathers together a majority of seats.).
1: Divided party control. (A) Different parties or individuals (unconnected to parties) control the executive and the legislature or (B) Executive power is divided between a president/monarch and a prime minister, each of which belongs to different parties; or between a non-partisan monarch and a prime minister.
2: Unified party control. A single party controls the executive and legislative branches of the national government. (This is true almost by definition in a parliamentary system where a single party has a majority of seats.).
SCALE: Ordinal, converted to interval by the measurement model.

2.3.6 V-Dem Indicators - Direct Democracy

Instructions to the coders (as shown in the surveys)

Direct democracy: This set of questions focuses on direct popular votes. Four mechanisms are distinguished: a. Measures placed on the ballot by the executive and/or the legislature for which the constitution or basic laws require a vote. These are referred to as *constitutional referendums* (*i.e. obligatory referendums*). b. Measures placed on the ballot by the executive and/or the legislature that for which the constitution or basic laws does not require a vote. These are referred to as *plebiscites*.

c. Measures placed on the ballot through a citizen petition process that concern the possible adoption of a new law or constitutional amendment. These are referred to as *popular initiatives*. d. Measures placed on the ballot through a citizen petition process that concern the possible rejection of a recently approved law or a bill discussed in parliament. These are referred to as *referendums*.

Note that we do not consider recall elections or citizen petitions to the legislature even they may also involve a gathering of signatures or a popular vote. Note also that in coding these questions it is sometimes important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice. In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..."

2.3.6.1 Initiatives permitted (v2ddlexci)

Long tag: vdem_cy_v2ddlexci

Original tag: v2ddlexci

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): David Altman
QUESTION: How many signatures — expressed as the percentage (percent) of registered voters — are required in order to place an initiative on the ballot?
RESPONSES:
Percent.
SCALE: Interval.
NOTES: Converted from (B) to (A) coding by David Altman.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Day-weighted mean

CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1900-2025

2.3.6.4 Initiatives signature-gathering period (v2ddsigdci)

Long tag: vdem_cy_v2ddsigdci

Original tag: v2ddsigdci

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): David Altman
QUESTION: Is a popular and direct vote required in order for a constitutional change to be legally binding?
CLARIFICATION: Unless otherwise stated, every question refers to direct democracy at the national level, *i.e.* it does not incorporate popular votes at the provincial or local level.
RESPONSES:
0: No, it is not required.
1: Depends on the content of constitutional change (for some it is required, for others however it is not).
2: Yes, any constitutional must be approved directly by the citizenry.
SCALE: Ordinal.
DATA RELEASE: 7-16.
COUNTRY-YEAR AGGREGATION: Last
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): David Altman
QUESTION: Is there legal provision for plebiscites?
CLARIFICATION: These are measures placed on the ballot by the legislature and/or the executive.
RESPONSES:
0: Not allowed.
1: Allowed but non-binding (or with an intervening institutional veto).
2: Allowed and binding.
ORDERING: If no legal provision exists (option 0), skip to question quot;Initiatives permittedquot; [v2ddlexci].
SCALE: Ordinal.
NOTES: Converted from (B) to (A) coding by David Altman.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Last
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

YEARS: 1900-2025

2.3.7 V-Dem Indicators - The Executive

Instructions to the coders (as shown in the surveys)

Executive:

In this section, we distinguish between the head of state (HOS) and the head of government (HOG). The *head of state* is an individual or collective body that serves as the chief public representative of the country. Sometimes this is a largely ceremonial role, *e.g.* a monarch who reigns but does not rule, or a president whose powers are strictly circumscribed. The *head of government* is the chief officer(s) of the executive branch of government, typically presiding over a cabinet. In a parliamentary system, this is usually the prime minister. In a presidential system, this is usually the president, who then serves as both, head of state and head of government. In a typical semi-presidential system, the president serves as head of state and the prime minister serves as head of government.

These definitions are grounded in the *functions* that each office performs, as described above. Titles can be confusing. Do not assume, for example, that simply because an individual holds the title of "president" s/he is serving as the chief public representative of the country. Likewise, it may be that the *effective* head of state/head of government is someone other than the *official* head of state/head of government. In this instance, the following questions apply to the person who effectively wields this power. In some socialist systems, for example, the official head of state was a person within the state bureaucracy, but in practice the chief public representative of the country was the chairman of the communist party. It is the latter who is the "effective" head of state, and hence should be the focus of your answers. The same applies if the head of state/head of government is so old, sick or

perhaps mentally disabled that s/he cannot perform his/her functions, which are instead performed by someone else. It is the latter person who is the effective head of state/head of government.

If you are considering a semi sovereign territory, such as a colony, an annexed territory or a member of the British Commonwealth, please answer the following questions with respect to the head of state and (if separate) the head of government who is located in the territory in question. Thus, in a typical British colony the governor-general—not the King/Queen of England—would be understood as the head of state. Likewise, in a British colony the local prime minister in the colony—not the prime minister in London—would be understood as the head of government.

In order to mitigate potential misunderstandings, the identities of the head of state and head of government for each country have been pre-coded for as many years as possible. Thus, when conducting your coding make sure to pay close attention to the names of these individuals, which you can see by clicking on the year grid for a particular year in the first question of this section, "HOS name." This is your key to what we mean by "head of state" or "head of government."

Note also that when the two functions are fused in the same office, we ask you to code only the head of state section of the survey. Any precoded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the precoded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives. If you feel strongly that the precoded information is wrong, please rate your confidence in the preloaded information and then consult your V-Dem contact. You will have to rate confidence in all the available years in order to proceed to the next question.

In order to avoid spending time on short-lived executives, we have included only executives who held office for at least 100 days.

2.3.7.1 HOS name (v2exnamhos)

Long tag: vdem_cy_v2exnamhos

Original tag: v2exnamhos

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: What is the title of the head of state?
CLARIFICATION: If the head of state and the head of government are the same person or body, this and the following questions refer to both. Please provide a literal translation of the title in English, with the title in the native language, or a transcription thereof, within parentheses. If the head of state temporarily fills the role, this will be excluded from the answer; they should be called e.g. quot;Presidentquot; and not quot;Acting Presidentquot;. The current head of state, and previous heads of state that were in office for at least 100 days, should be included. If the head of state is a collective body, provide the title of the person exercising the most effective power over this body, or, if no such person exists, enter the expression quot;collective body.quot; If multiple Heads of State with different titles were appointed any given year, please answer this question with respect to each one of them; also make sure you enter the specific date of appointment for each one of them. Once again, the identities of the head of state for each country have been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: If the head of state took actions to dissolve the legislature, would he/she be likely to succeed?
CLARIFICATION: The question refers to whether the head of state is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. By quot;dissolving the legislaturequot; we refer to the ability of the head of state to call a new election for the legislature.
RESPONSES:
0: No.
1: Yes, but not at his/her own discretion, only when prompted to as a response to specific events (for example, after a certain number of votes of no confidence, or after a certain number of failed attempts to form a cabinet).
2: Yes, at his/her own discretion, but with restrictions (for example, by frequency, such as "once a year", by time point within term, such as "not within the last sixth months of the head of state's term", and by the requirement that the head of state must then himself/herself stand for election).
3: Yes, at his/her own discretion and without restrictions.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: In practice, does the head of state have the power to appoint — or is the approval of the head of state necessary for the appointment of — cabinet ministers?
CLARIFICATION: The question refers to whether the head of state is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. If confirmation of the legislature is needed, this should be coded as such also when the HOS controls the majority of the legislature (quot;tacit consentquot;). Moreover, by the quot;legislaturequot; in this case, we mean either house of the legislature (in the case of bicameralism).
RESPONSES:
0: No.
1: Yes, but only with respect to the head of the cabinet, and only with the tacit consent or explicit confirmation by the legislature.
2: Yes, but only with the tacit consent or explicit confirmation by the legislature.
3: Yes, without any need for confirmation by the legislature, but only with respect to the head of the cabinet.
4: Yes, without any need for confirmation by the legislature.
SCALE: Ordinal, converted to interval by the measurement model.

PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: If the head of state took actions to veto a piece of legislation, would he/she be likely to succeed?
CLARIFICATION: By "veto", we mean either a partial veto (concerning any parts of a bill) or package vetoes (concerning whole bills) of bills that have already been passed by the legislature. The question refers to whether the head of state is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not.
RESPONSES:
0: No.
1: Yes, but the legislature can override the veto by a simple majority vote (a vote of more than half of those voting).
2: Yes, but the legislature can override the veto by an absolute majority vote (a vote of more than half of the members of the legislature).
3: Yes, but the legislature can override the veto by a qualified/extraordinary majority vote (a super-majority — *e.g.*, 2/3 or 3/4 — of those voting).
4: Yes, with no possibility of override.
SCALE: Ordinal, converted to interval by the measurement model.

Description:
VARIABLE TYPE: A*
PROJECT MANAGER(S): Jan Teorell
QUESTION: Is the head of state (HOS) also head of government (HOG)?
CLARIFICATION: Note that this question only pertains to whether the head of state and the head of government are the same person or body, regardless of the relative powers of the two. Thus, in a constitutional monarchy, for example, the head of state and head of government are not the same even though the head of state may lack any real political power. If multiple head of states/head of governments were appointed in any year, please answer this question with respect to all of them by checking or unchecking the specific dates. Once again, the identities of the head of government for each country have been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives.
RESPONSES:
0: No
1: Yes
ORDERING: If HOS=HOG (answer is yes: 1) for all years: skip to quot;Executive as whole introductionquot; [v2exintro3].
SCALE: Dichotomous.
SOURCE(S): **?**; Elkins & Ginsburg (2025); **?**; **?**; **?**.

DATA RELEASE: 1-16.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: Was approval of the legislature necessary for the appointment of the head of state?
CLARIFICATION: By "approval" we mean both explicit approval, such as through a vote of confidence, and tacit approval, such as a practice stating that the head of state has to have majority support (or should not be opposed by the majority) in the legislature even though no vote is taken on his/her appointment. We are *not* concerned with certification of electoral college votes (as in the US, Mexico).
RESPONSES:
0: No.
1: Yes.
ORDERING: Answer this question only for those years you selected 1-5 on question v2expathhs.
SCALE: Dichotomous.
SOURCE(S): **?**; Constitute Project (2026), V-Dem country coordinators.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: What is the maximum term length of the Head of State, in years?
RESPONSES:
Numeric, number of years.
0: Term length not specified in constitution.
99: Not Applicable.
100: Term length for life or there is no term length.
SOURCE(S): Elkins & Ginsburg (2025); Constitute Project (2026).
NOTES: *De jure* term lengths for Head of State and Head of Government, coded for each head of state and head of government as coded in v2exnamhos and v2exnamhog. In the case of a single office representing both Head of State and Head of Government, HOS is coded to the appropriate term length while HOG is coded as 99. For colonies, if there was no official local constitution, HOS/HOG is coded by their constitutional status according to the colonial power. Finally, for sovereign states lacking a constitution or having suspended their constitution, HOS/HOG is coded to 99 as not applicable for those relevant years.
Changes to term lengths are recorded as occurring on the date that a new constitution or constitutional amendment takes force, or, if unavailable, date of promulgation.
DATA RELEASE: 5-16.
COUNTRY-YEAR AGGREGATION: Last

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: How did the head of state reach office?
CLARIFICATION: If several bodies were involved in the appointment process, select the one that exerted the most critical impact on the decision. However, in the next question we ask separately about whether the approval of the legislature was necessary. Response category 7 should only be selected if the head of state is directly elected, not if he or she was appointed by the legislature after an election. We count as direct elections (category 7) also those indirect elections carried out by an electoral college, whose only purpose is to elect the president. In cases where an elected president dies, resigns, or is legally removed from office, and a line of succession is defined by the constitution, we code a vice president ascending to the presidency according to how they assumed the vice presidency. *E.g.*, coded under category 7 when elected on the same ticket as the outgoing president, or 6 if they were appointed by the legislature.
RESPONSES:
0: Through the threat of or application of force, such as a coup or rebellion.
1: Appointed by a foreign power.
2: Appointed by the ruling party (in a one-party system).
3: Appointed by a royal council.
4: Through hereditary succession.
5: Appointed by the military.
6: Appointed by the legislature.
7: Directly through a popular election (regardless of the extension of the suffrage).
8: Other.
ORDERING: If you select 1-5, skip to question quot;HOS selection by legislature in practice [v2exaphos]quot;. If you selected 6-7, skip to question [v2excomhs].
SCALE: Nominal (v2expathhs), or a series of dichotomous scales.
SOURCE(S): **?**; Constitute Project (2026), V-Dem country coordinators.
NOTES: Converted from B to A coding. v2expathhs is coded according to appointment dates of the Head of State. The same is true for coups or rebellions where the date when the HOS was appointed through a coup, or the first day in office after the coup, is coded.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Coded on HOS appointment dates and December 31 (v2exnamhos).
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Nils Düpont
QUESTION: What is the name of the political party to which the head of state belongs?
CLARIFICATION: "Technical" refers to non-party leaders, such as members of the royal family, military leaders, foreign leaders, governors, or collective bodies. "Independent" refers to leaders without party affiliation in systems where the leader would normally be affiliated to a party. This does not include leaders in systems where a candidate who is running on a party platform is required to leave the party for the duration of their term. Appointed leaders are considered to be affiliated with the party or body that appointed them.
RESPONSES:
Text.

2.3.7.19 HOS removal by other in practice (v2exrmhsol)

Long tag: vdem_cy_v2exrmhsol

Original tag: v2exrmhsol

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_nr
QUESTION: Which of the following bodies would be likely to succeed in removing the head of state if it took actions (short of military force) to do so?
CLARIFICATION: The question refers to whether any of these bodies are considered to hold this power of removal in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. Choose all that apply.
RESPONSES:
0: None. (0=No, 1=Yes) [v2exrmhsol_0]
1: A foreign power. (0=No, 1=Yes) [v2exrmhsol_1]
2: The ruling party or party leadership body (in a one-party system). (0=No, 1=Yes) [v2exrmhsol_2]
3: A royal council. (0=No, 1=Yes) [v2exrmhsol_3]
4: The military. (0=No, 1=Yes) [v2exrmhsol_4]
5: A religious body. (0=No, 1=Yes) [v2exrmhsol_5]
6: A tribal or ethnic council. (0=No, 1=Yes) [v2exrmhsol_6]
7: Other. (0=No, 1=Yes) [v2exrmhsol_7]
ORDERING: If you select 7, proceed to the next question [v2exrmhsnl]. If you select 0-6, skip to question quot;HOS dissolution in practicequot; [v2exctlhs].
SCALE: Mean-aggregated scores of dichotomized variable.
ANSWER-TYPE: Multiple-selection.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Mean.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Jan Teorell
QUESTION: What is the name of the head of government?
CLARIFICATION: If the head of government is a collective body, provide the name of the person executing the most effective power over this body, or, if no such person exists, enter the expression quot;collective body.quot; Do not include nicknames. If multiple heads of government were appointed any given year, please answer this question with respect to each one of them; also make sure you enter the specific date of appointment and *reappointment* for each one of them. The current head of government, and previous heads of government that were in office for at least 100 days, should be included. Once again, the identities of the head of government for each country have been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives.
RESPONSES:
Text.

VARIABLE TYPE: A*
PROJECT MANAGER(S): Jan Teorell
QUESTION: What is the title of the head of government (HOG)?
CLARIFICATION: Please provide a literal translation of the title in English, with the title in the native language, or a transcription thereof, within parentheses. If the head of government temporarily fills the role, this will be excluded from the answer; they should be called e.g. quot;Prime Ministerquot; and not quot;Acting Prime Ministerquot;. The current head of government, and previous heads of government that were in office for at least 100 days, should be included. If the head of government is a collective body, provide the title of the person exercising the most effective power over this body, or, if no such person exists, the name of the entire body. If multiple heads of government with different titles were appointed any given year, please answer this question with respect to all of them; also make sure you enter the specific date of appointment for each one of them. Once again, the identities of the head of government for each country have been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives.

QUESTION: If the legislature, or either chamber of the legislature, took actions to remove the head of government from office, would it be likely to succeed even without having to level accusations of unlawful activity *and* without the involvement of any other agency?

CLARIFICATION: The question refers to whether the legislature (or either of its chambers) is considered to hold this power of removal in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. Moreover, the question refers to removal other than through an impeachment process.
RESPONSES:
0: No, under no circumstances.
1: No, unlikely, but there is a chance it would happen.
2: Yes, probably, but there is a chance it would fail.
3: Yes, most likely.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: If the head of government took actions to dissolve the legislature, would he/she be likely to succeed?
CLARIFICATION: The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. By quot;dissolving the legislaturequot; we refer to the ability of the head of government to call a new election for the legislature.
RESPONSES:
0: No.
1: Yes, but not at his/her own discretion, only when prompted to as a response to specific events (for example, after a certain number of votes of no confidence, or after a certain number of failed attempts to form a cabinet).
2: Yes, at his/her own discretion, but with restrictions (for example, by frequency, such as ”once a year”, by time point within term, such as ”not within the last sixth months of the

head of government's term", and by the requirement that the head of government must then himself/herself stand for election).
3: Yes, at his/her own discretion and without restrictions.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: If the head of government took actions to veto a piece of legislation, would he/she be likely to succeed?
CLARIFICATION: By "veto", we mean either a partial veto (concerning any parts of a bill) or package vetoes (concerning whole bills) of bills that have already been passed by the legislature. The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not.
RESPONSES:
0: No.
1: Yes, but the legislature can override the veto by a simple majority vote (a vote of more than half of those voting).
2: Yes, but the legislature can override the veto by an absolute majority vote (a vote of more than half of the members of the legislature).
3: Yes, but the legislature can override the veto by a qualified/extraordinary majority vote (a super-majority — *e.g.*, 2/3 or 3/4 — of those voting).
4: Yes, with no possibility of override.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Does the head of government have the capacity, in practice, to propose legislation?
CLARIFICATION: By "propose legislation", we mean the introduction of legislative bills. The question refers to whether the head of government is considered to hold this power in practice, regardless of whether this is regulated by law and whether this power has been exercised or not.
RESPONSES:
0: Yes, in all policy areas, including some exclusive domains (where neither the legislature nor other bodies may initiate bills).
1: Yes, in all policy areas, but this power is shared with the legislature and perhaps with other bodies.
2: No. The head of government cannot propose legislation.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v2exhoshog is 1

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: Was the approval of the legislature necessary for the appointment of the head of government?
CLARIFICATION: By "approval" we mean both explicit approval, such as through a vote of confidence, and tacit approval, such as a practice stating that the head of government has to have majority support in the legislature although no vote is taken on his/her appointment. If the same person or body is both head of state and head of government, they are only coded as head of state.
RESPONSES:
0: No
1: Yes
ORDERING: Answer this question only if you selected 1-6 on question v2expathhg.
SCALE: Dichotomous.
SOURCE(S): **?**; Constitute Project (2026), V-Dem country coordinators.

NOTES: Converted from (B) to (A) coding. v2expathhg is coded according to appointment dates of the Head of Government. The same is true for coups or rebellions where the date when the HOG was appointed through a coup, or the first day in office after the coup, is coded.
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Coded on HOG appointment dates and December 31 (v2exnamhog).
CLEANING: Set to missing when v2exhoshog is 1; Set to missing when v2expathhg is 7 or 8.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: How did the head of government gain access to office?
CLARIFICATION: If several bodies were involved in the appointment process, select the one that exerted the most critical impact on the decision. However, in the next question we ask separately about whether the approval of the legislature was necessary. Response category 8 should only be selected if the head of government is directly elected, not if he or she was appointed by the legislature after an election. If the same person or body is both head of state and head of government, they are only coded as head of state.
RESPONSES:
0: Through the threat of or application of force, such as a coup or rebellion.
1: Appointed by a foreign power.
2: Appointed by the ruling party (in a one-party system).
3: Appointed by a royal council.
4: Through hereditary succession.
5: Appointed by the military.
6: Appointed by the head of state.
7: Appointed by the legislature.
8: Directly through a popular election (regardless of the extension of the suffrage).
9: Other.
ORDERING: If you selected 1-6, skip to question quot;HOG selection by legislature in practicequot; [v2exaphogp]. If you selected 7-8, skip to question [v2excomex].
SCALE: Nominal (v2expathhg), or a series of dichotomous scales.
SOURCE(S): **?**; Constitute Project (2026), V-Dem country coordinators.
NOTES: Converted from (B) to (A) coding. v2expathhg is coded according to appointment dates of the Head of Government. The same is true for coups or rebellions where the date when the HOG was appointed through a coup, or the first day in office after the coup, is coded.
DATA RELEASE: 1-16.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Nils Düpont
QUESTION: What is the name of the political party to which the head of government belongs?
CLARIFICATION: "Technical" refers to non-party leaders, such as members of the royal family, military leaders, foreign leaders, governors, or collective bodies. "Independent" refers to leaders without party affiliation in systems where the leader would normally be affiliated to a party. This does not include leaders in systems where a candidate who is running on a party platform is required to leave the party for the duration of their term. Appointed leaders are considered to be affiliated with the party or body that appointed them.
RESPONSES:
Text.

PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_nr
QUESTION: Which of the following bodies would be likely to succeed in removing the head of government if it took actions (short of military force) to do so?
CLARIFICATION: The question refers to whether any of these bodies are considered to hold this power of removal in practice, regardless of whether this is regulated by law and whether this power has been exercised or not. Choose all that apply.
RESPONSES:
0: None. (0=No, 1=Yes) [v2exrmhgnp_0]
1: A foreign power. (0=No, 1=Yes) [v2exrmhgnp_1]
2: The ruling party or party leadership body (in a one-party system). (0=No, 1=Yes) [v2exrmhgnp_2]
3: A royal council. (0=No, 1=Yes) [v2exrmhgnp_3]
4: The military. (0=No, 1=Yes) [v2exrmhgnp_4]
5: The head of state. (0=No, 1=Yes) [v2exrmhgnp_5]
6: A religious body. (0=No, 1=Yes) [v2exrmhgnp_6]
7: A tribal or ethnic council. (0=No, 1=Yes) [v2exrmhgnp_7]
8: Other. (0=No, 1=Yes) [v2exrmhgnp_8]
ORDERING: If you select 8, proceed to the next question [v2exrmhgop]. If you select 0-7, skip to question HOG control [v2exctlhg].
SCALE: Mean-aggregated scores of dichotomized variable.
ANSWER-TYPE: Multiple selection

QUESTION: Do members of the executive (the head of state, the head of government, and cabinet ministers) respect the constitution?
RESPONSES:
0: Members of the executive violate the constitution whenever they want to, without legal consequences.
1: Members of the executive violate most provisions of the constitution without legal consequences, but still must respect certain provisions.
2: Somewhere in between (1) and (3). Members of the executive would face legal consequences for violating most provisions of the constitution, but can disregard some provisions without any legal consequences.
3: Members of the executive rarely violate the constitution, and when it happens they face legal charges.
4: Members of the executive never violate the constitution.

QUESTION: How routinely do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, grant favors in exchange for bribes, kickbacks, or other material inducements?
RESPONSES:
0: It is routine and expected.
1: It happens more often than not in dealings with the executive.
2: It happens but is unpredictable: those dealing with the executive find it hard to predict when an inducement will be necessary.
3: It happens occasionally but is not expected.
4: It never, or hardly ever, happens.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How routinely do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements?
CLARIFICATION: When responding to this question, we would like to you think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response.
RESPONSES:
0: Extremely common. Most public sector employees are systematically involved in petty but corrupt exchanges almost all the time.
1: Common. Such petty but corrupt exchanges occur regularly involving a majority of public employees.
2: Sometimes. About half or less than half of public sector employees engage in such exchanges for petty gains at times.
3: Scattered. A small minority of public sector employees engage in petty corruption from time to time.
4: No. Never, or hardly ever.
SCALE: Ordinal, converted to interval by the measurement model.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen, Tore Wig, Vilde Lunnan Djuve
QUESTION: What is the regime name as well as start and end dates of this regime?
CLARIFICATION: The information on this question has been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that the identity of the regime, which is given a suggestive name, and its start and end dates have already been entered. We are asking you only to add your confidence in the pre-coded information This

means that the text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same regime.
SOURCE(S): Djuve et al. (2020).
DATA RELEASE: 9-16.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen, Tore Wig, Vilde Lunnan Djuve
QUESTION: Could you specify the type of process that you consider the most important in leading to the end of the regime?
CLARIFICATION: The information on this question has been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that what is considered the most important process that eventually ended the relevant regime has already been entered. We are asking you only to add your confidence in the pre-coded information This means that the information has already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same regime.
RESPONSES:
0: A military coup d'etat.
1: A coup d'etat conducted by other groups than the military.
2: A self-coup (autogolpe) conducted by the sitting leader.
3: Assassination of the sitting leader (but not related to a coup d'etat)
4: Natural death of the sitting leader
5: Loss in civil war.
6: Loss in inter-state war.
7: Foreign intervention (other than loss in inter-state war)
8: Popular uprising.
9: Substantial political liberalization/democratization with some form of guidance by sitting regime leaders
10: Other type of directed and intentional transformational process of the regime under the guidance of sitting regime leaders (excluding political liberalization/democratization)

11: Substantial political liberalization/democratization without guidance by sitting regime leaders, occurring from some other process (such as an unexpected election loss for the sitting regime) than those specified by categories 1–10
12: Other process than those specified by categories 1–11.
13: The regime still exists

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Carl Henrik Knutsen, Tore Wig, Vilde Lunnan Djuve
QUESTION: Is there an identifiable political regime?
CLARIFICATION: This question is used to identify so-called interregnum periods, where no political regime is in control over the entity. Different types of political situations can lead to periods of time under which there is no identifiable political regime, one example being a civil war in which none of the parties have clear control over political bodies and processes in the country. However, the interregnum coding is employed conservatively, meaning that partial control over political bodies and processes in fairly large parts of the country (which is often the case also during civil wars) is sufficient for a 0 score.

Please note that the expert coded (C) questions on support and opposition groups in the regime survey are only coded when v2regint=1.
RESPONSES:
0: No.
1: Yes.
SCALE: Dichotomous

QUESTION: Which (one) group does the current political regime rely on most strongly in order to maintain power?
CLARIFICATION: Choose the group that, if it were to retract its support to the regime, would most endanger the regime (most strongly increase the chance that it loses power).
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.
5: The military.
6: An ethnic or racial group(s).

7: A religious group(s).
8: Local elites, including chiefs.
9: Urban working classes, including labor unions.
10: Urban middle classes
11: Rural working classes (e.g., peasants).
12: Rural middle classes (e.g., family farmers).
13: A foreign government or colonial power.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Mode.
quot;Tiesquot; between categories are resolved so that the corresponding category in v2regsupgroups with the highest mean for the same country-date is chosen.
CLEANING: Set to missing where v2regint is 0.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In total, how large is the percentage share of the domestic adult (18+) population that belongs to the political regime's supporting groups?
CLARIFICATION: You should consider the sum of all the groups (excepting foreign governments and colonial powers) entered in v2regsupgroups. Hence, your answer should take into account the total size of the/those groups that are supportive of the regime, and, if it/they were to retract support would substantially increase the chance that the regime would lose power. Regarding the issue of overlapping identities, and one individual potentially belonging to more than one groups: Individuals should only be quot;countedquot; once; thus if the two relevant supporting groups are (4) civil servants, which total about 5percent, and all of them belong to a particular ethnic group (6) also coded as a relevant, the overall total size of the supporting groups is still 5percent (presuming that no other members of that ethnic group are essential for the regime staying in power).
RESPONSES:
0: Extremely small (About 1 percent of the population or less; examples of this could include regimes supported by — and needing the support from — a handful of higher-rank military

officers, or by only a royal council and a few hundred landowners)
1: Very small (Between 1 percent and 5 percent of the population; examples of this could include regimes supported by — and needing the support from — higher ranking civil servants and the military, or by moderately sized business and agrarian elites)
2: Small (Between 5 percent and 15 percent; examples of this could include regimes supported by — and needing the support from — relatively small ethnic groups, or by urban elites and the urban middle classes in predominantly rural societies)
3: Moderate (Between 15 percent and 30 percent; examples of this could include regimes supported by — and needing the support from — moderately sized ethnic groups, by rural middle classes in rural societies, or by urban middle classes in urban societies)
4: Large (More than 30 percent; examples of this could include regimes supported by — and needing the support from — large ethnic groups (and then not only the elites/leaders of such groups), or by rural working classes in rural societies.)
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing where v2regint is 0
CITATION: Pemstein et al. (2026); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (one) group constitutes the greatest threat to the current regime?
CLARIFICATION: Choose the one group (among those you registered as opposition groups under the v2regoppgroups question) that is the most dangerous threat to the regime in a given year. That is, the group that could most strongly increase the chance that the regime loses power. The importance/danger associated with an opposition group will be affected both by its level of hostility towards the regime and its power resources/how capable it is of removing the regime should it try to do so. We remind you that groups need not be actively mobilized or explicitly engaged in high-level opposition activities to be counted; key opposition groups may include actors who oppose the regime and constitute a dormant threat to the regime, even though they do not take particular actions in a given year.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.
5: The military.
6: An ethnic or racial group(s).
7: A religious group(s).
8: Local elites, including chiefs.
9: Urban working classes, including labor unions.
10: Urban middle classes
11: Rural working classes (e.g., peasants).
12: Rural middle classes (e.g., family farmers)
13: A foreign government or colonial power.
DATA RELEASE: 11-16.

CROSS-CODER AGGREGATION: Mode.
quot;Tiesquot; between categories are resolved so that the corresponding category in v2regoppgroups with the highest mean for the same country-date is chosen.

QUESTION: In total, how large is the share of the domestic adult (18+) population that are noteworthy opposition actors to the current political regime?
CLARIFICATION: Consider the sum total of all the groups (excepting foreign governments and colonial powers) entered in v2regoppgroups. Hence, your answer should take into account the total size/number of the actors that oppose the regime and pose a threat to the regime maintaining power.
We remind you that groups need not be actively mobilized or explicitly engaged in high-level opposition activities to be counted; key opposition groups may include actors who oppose the regime and constitute a dormant threat to the regime, even though they do not take particular actions in a given year.
Regarding the issue of individuals potentially belonging to more than one “opposition group”: Individuals should only be quot;countedquot; once for the purpose of this question. For example, if the two relevant opposition groups are (4) civil servants, which total about 5percent of the population, and all of them belong to a particular ethnic group (6) also coded as a relevant, the overall total size of the opposition groups is still 5percent (presuming that there are no other members of that ethnic group who oppose the regime).
We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:

0: Extremely small (About 1 percent of the population or less)
1: Very small (Between 1 percent and 5 percent of the population)
2: Small (Between 5 percent and 15 percent)
3: Moderate (Between 15 percent and 30 percent)
4: Large (More than 30 percent)
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 11-16.

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (one) group has the strongest pro-regime preferences, irrespective of the group's resources and capabilities for affecting the regime's hold on power?
CLARIFICATION: Consider only the pro-regime preferences of individuals in this group, and do not take into consideration the abilities of this group to actually affect regime survival. Hence, the group with the strongest pro-regime preferences need not be the most important support group.
One way to think about what pro-/anti-regime preferences means is: what would individuals hypothetically (honestly) answer if asked in a survey: "On a scale from 0-10, how pleased are you with the current political regime, with 10 indicating the strongest support." Select the group with the highest average score in this hypothetical survey.
We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:

0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.
5: The military.
6: An ethnic or racial group(s).
7: A religious group(s).
8: Local elites, including chiefs.
9: Urban working classes, including labor unions.
10: Urban middle classes
11: Rural working classes (e.g., peasants).
12: Rural middle classes (e.g., family farmers)
13: A foreign government or colonial power.
DATA RELEASE: 11-16.
CROSS-CODER AGGREGATION: Mode.
quot;Tiesquot; between categories are resolved so that the corresponding category in v2regsupgroups with the highest mean for the same country-date is chosen.

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Carl Henrik Knutsen
ADDITIONAL VERSIONS: *_nr
QUESTION: Irrespective of its stance toward the regime (pro-, anti-, or neutral), which one group is the most important for affecting the current regime's chances of staying in power?
CLARIFICATION: Here we ask you to disregard group preferences, and only consider a group's resources and capabilities vis-a-vis affecting regime survival. In other words, do not consider whether this group is pro-regime, anti-regime, or neutral to the regime. Take only into consideration the capabilities of this group to affect regime survival, if key members of the group were to hypothetically mobilize the group in an effort to remove the regime. Politically neutral, as well as pro- and anti-regime groups, may have ample resources and be capable of organizing coordinated action. As a result, all three types of groups may have great influence over regime survival and change.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes.
1: Agrarian elites, including rich peasants and large landholders.
2: Party elites (of the party or parties that control the executive).
3: Business elites.
4: Civil servants.

Description:
VARIABLE TYPE: C

PROJECT MANAGER(S): Sirianne Dahlum, Tore Wig
ADDITIONAL VERSIONS: *_nr
QUESTION: Which (if any) groups include a significant share of individuals who explicitly and actively mobilize against the regime in a particular year? (Check all that apply.)
CLARIFICATION: Consider which group(s) include a significant share of individuals who engage in active and explicit opposition to the regime to promote its removal. These actors make explicit statements of dissent from the regime, publicly voice their preference for regime change, and may possibly engage in other actions intended to further the removal of the regime such as anti-regime demonstrations, sit-ins, boycotts, strikes, the formation of anti-system parties, acts of sabotage, or armed rebellion.
Please note that only years when anti-regime speech or activity occurs should be coded. In years when groups probably oppose the regime, but are not engaged in any explicit acts of opposition, the group should not be selected. We remind you of the definition of a regime as the set of formal and/or informal rules that are essential for choosing political leaders and/or maintaining political leaders in power. Hence, we are not asking about which groups oppose the current government in a democracy (and who would vote for another party), but still accept the democratic rules as legitimate. We are, instead, asking about groups that want to see the wider political regime removed and replaced.
RESPONSES:
0: The aristocracy, including high status hereditary social groups and castes. [v2regoppgroupsact_0]
1: Agrarian elites, including rich peasants and large landholders. [v2regoppgroupsact_1]
2: Party elites (of the party or parties that control the executive). [v2regoppgroupsact_2]
3: Business elites. [v2regoppgroupsact_3]
4: The state bureaucracy. [v2regoppgroupsact_4]
5: The military. [v2regoppgroupsact_5]
6: An ethnic or racial group(s). [v2regoppgroupsact_6]
7: A religious group(s). [v2regoppgroupsact_7]
8: Local elites, including customary chiefs. [v2regoppgroupsact_8]
9: Urban working classes, including labor unions. [v2regoppgroupsact_9]
10: Urban middle classes. [v2regoppgroupsact_10]
11: Rural working classes (e.g., peasants). [v2regoppgroupsact_11]
12: Rural middle classes (e.g., family farmers). [v2regoppgroupsact_12]
13: A foreign government or colonial power. [v2regoppgroupsact_13]
SCALE: Mean-aggregated scores of dichotomized variable.
ANSWER-TYPE: Multiple-selection.
DATA RELEASE: 11-16.
CROSS-CODER AGGREGATION: Mean.
CLEANING: Set to missing where v2regint is 0.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

DEFAULT DATE: Default date for this variable is January 1.

2.3.8 V-Dem Indicators - The Legislature

Instructions to the coders (as shown in the surveys)

The Legislature:

The following questions pertain to the legislature, an assembly of deputies or representatives with powers to consider, pass, amend, or repeal laws. If there is no legislature in the country you are coding for some period of years, do not code any questions for those year. If you are considering a semi-sovereign territory such as a colony please answer this question with respect to the legislature that is seated within the territory in question (such as the local legislative assembly in a British colony, not the Parliament in London). A popular election need not involve universal suffrage; indeed, suffrage may be highly restricted. A "direct election" can include seats reserved for special groups (*e.g.*, ethnic groups or women) so long as these members are chosen by popular election.

Frequently, it is important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens on the ground). In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues. Note that sometimes we ask different coders to code different

aspects of a question. So, you might get a question about the *de facto* state of affairs, but another source might provide the answer to the *de jure* state of affairs.

2.3.8.1 Legislature bicameral (v2lgbicam)

Long tag: vdem_cy_v2lgbicam

Original tag: v2lgbicam

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Inter-Parliamentary Union (IPU) (2025), Elkins & Ginsburg (2025), International Foundations for Electoral System (IFES) (2026)

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Steven Fish, Matthew Kroenig
QUESTION: How many chambers does the legislature contain?
CLARIFICATION: The number of chambers have been pre-coded for as many years as possible. This means that the score has already been entered, so we are asking you only to add your confidence in the pre-coded rating. If there is a change in the number of chambers, this is coded on the exact date of when the change occurred, for example the exact date of when a legislature was dissolved, or when the lower and/or upper chamber was established (usually coded on the date when the new legislature first meets; otherwise on the date of the legislative election where the composition of the new legislature was decided).
RESPONSES:
0: 0 chambers.
1: 1 chamber.
2: 2 or more chambers.
SCALE: Ordinal.
SOURCE(S): **?**; **?**; **?**; **?**; Elkins & Ginsburg (2025); International Foundations for Electoral System (IFES) (2026); **?**, websites of national parliaments.
NOTES: For the country-year aggregation of the dataset, we have taken the minimum value of v2lgbicam. Constituent assemblies that perform other functions except for drafting and adopting a new constitution (*e.g.* legislating, electing president, adopting budget, etc) are coded as 1 (1 chamber). In cases when a parliament consists of three or more chambers, one of the chamber names is coded in the variable "Lower chamber legislature name" (v2lgnamelo), while the others are listed in the variable quot;Upper chamber namequot; (v2lgnameup). South Africa had a three-chamber parliament during the period of 1984-1994. Subsequently, variable v2lgbicam is coded 2, v2lgnamelo is coded "House of Assembly", and v2lgnameup enlists "House of Representatives, House of Delegates".
DATA RELEASE: 1-16.
COUNTRY-YEAR AGGREGATION: Last
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

QUESTION: In practice, does the legislature control the resources that finance its own internal operations and the perquisites of its members?
RESPONSES:
0: No. The benefits legislators receive or the finances needed for the legislature's operation depend on remaining in good standing with an outside authority, such as the executive.
1: Yes.
SCALE: Dichotomous, converted to interval by the measurement model.
DATA RELEASE: 3-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v2lgbicam is 0

(2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Pamela Paxton
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Considering all disadvantaged social groups in the country, how well represented are these groups, as a whole, in the national legislature?
CLARIFICATION: Disadvantage refers to socioeconomic disadvantage. Specifically, in order to be considered disadvantaged members of a social group must have an average income that is significantly below the median national income.
RESPONSES:
0: They have no representation at all.
1: They are highly under-represented relative to their proportion of the general population.
2: They are slightly under-represented relative to their proportion of the general population.
3: They are represented roughly equal relative to their proportion of the general population.

4: They are over-represented relative to their proportion of the general population.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category 0: There are no disadvantaged groups in the society, is coded as a separate variable (v2lgdsadlobin). The variable is then rebased to zero.
DATA RELEASE: 3-16.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Steven Fish, Matthew Kroenig
QUESTION: What is the name of the upper chamber of the legislature?
CLARIFICATION: Please provide an as accurate as possible literal translation of the name of the upper chamber of the legislature in English, with the name in the native language, or a transcription thereof, within parentheses.
The legislature names have been pre-coded for as many years as possible. This means that the text and specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating.
RESPONSES:
Text.
NOTES: In cases when a parliament consists of three or more chambers, one of the chamber names is coded in the variable "Lower chamber legislature name" (v2lgnamelo), while the

others are enlisted in the variable quot;Upper chamber namequot; (v2lgnameup). Example: South Africa had a three-chamber parliament during the period of 1984-1994. Subsequently, variable v2lgbicam is coded 2, v2lgnamelo is coded "House of Assembly", and v2lgnameup enlists "House of Representatives, House of Delegates".
DATA RELEASE: 3-16.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Steven Fish, Matthew Kroenig
QUESTION: What is the name of the lower (or unicameral) chamber of the legislature?
CLARIFICATION: Please provide an as accurate as possible literal translation of the name of the lower (or unicameral) chamber of the legislature in English, with the name in the native language, or a transcription thereof, within parentheses.
The legislature names have been pre-coded for as many years as possible. This means that the text and specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating.
RESPONSES:
Text.
NOTES: In cases when a parliament consists of three or more chambers, one of the chamber names is coded in the variable "Lower chamber legislature name" (v2lgnamelo), while the others are enlisted in the variable quot;Upper chamber namequot; (v2lgnameup). Example: South Africa had a three-chamber parliament during the period of 1984-1994. Subsequently, variable v2lgbicam is coded 2, v2lgnamelo is coded "House of Assembly", and v2lgnameup enlists "House of Representatives, House of Delegates".

QUESTION: In practice, is the approval of the lower (or unicameral) chamber of the legislature required to pass legislation?
RESPONSES:
0: No. Legislation is routinely passed without the approval of the lower (or unicameral) chamber of the legislature.
1: Yes, usually. Legislation is usually passed with the approval of the lower (or unicameral) chamber of the legislature, but occasionally the legislature is by-passed.
2: Yes, always. Legislation of any consequence is always approved by the lower (or unicameral) chamber of the legislature.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Steven Fish, Matthew Kroenig
QUESTION: By law, does the lower (or unicameral) chamber of the legislature have the ability to introduce bills in all policy jurisdictions?
RESPONSES:
0: No, there are policy areas in which the lower (or unicameral) chamber cannot introduce bills.
1: Yes.
SCALE: Dichotomous.
SOURCE(S): Elkins & Ginsburg (2025); Constitute Project (2026), V-Dem country coordinators.
NOTES: Converted from (B) to (A) coding. V-Dem Country Coordinators answers were used for country-years where data was missing in CCP (Elkins *et al.* 2012).
DATA RELEASE: 1-16.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Pamela Paxton
QUESTION: Is there a national-level gender quota for the lower (or unicameral) chamber of the legislature?
CLARIFICATION: National-level quotas either reserve some seats for women in the legislature (as a whole or per district) or mandate through statutory law that all political parties must nominate a certain percentage of female candidates or candidates considered for nomination. A sanction for noncompliance imposes a penalty on a party that fails to meet the quota provisions. Examples of sanctions for noncompliance include rejection of the party list, loss of public campaign funds, or other financial penalties. Weak sanctions are those that parties may be able to ignore, such as a very weak financial penalty. Strong sanctions provide strong deterrents for noncompliance. An example of a strong sanction would be the rejection of a party's list. Countries with both candidate quotas and reserved seats are recorded at the stronger level. This variable records quotas from the date of implementation. The quota adoption date may be earlier, sometimes by several years. Data on quota adoption is available from the QAROT dataset (Hughes, Paxton, Clayton, and Zetterberg 2017) while the theoretical implications of adoption vs. implementation are discussed in Hughes, Paxton, Clayton, and Zetterberg (2018).
RESPONSES:
0: No national level gender quota.
1: Yes, a statutory gender quota for all parties without sanctions for noncompliance.
2: Yes, statutory gender quota for all parties with weak sanctions for noncompliance.
3. Yes, statutory gender quota for all parties with strong sanctions for noncompliance.
4: Yes, there are reserved seats in the legislature for women.
ORDERING: If you answer 1-4, proceed to the next question [v2lgqugens]. If you answer 0, skip to question [v2lglegllo].
SCALE: Ordinal.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Pamela Paxton
QUESTION: Does the national-level quota for the lower (or unicameral) chamber of the legislature contain a placement mandate?
CLARIFICATION: A placement mandate is a rule concerning rank order on the party list, usually to ensure that women are placed in electable positions on the party list. An example would a rule stating that no more than three of the top five candidates can be of the same gender. Coded only for years where a gender quota was present.
RESPONSES:
0: No.
1: Yes.
ORDERING: Only answer this question if you answered 1-4 on previous question [v2lgqugen].
SCALE: Dichotomous.
SOURCE(S): Quota Project (2025); **?**; **?**, coding by project manager.
DATA RELEASE: 9-16.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Pamela Paxton
QUESTION: What is the threshold of the quota for the lower (or unicameral) chamber of the legislature?
CLARIFICATION: A quota is the minimum threshold, understood as the percentage (percent) of the total seats in the legislature reserved for women or the percentage of female candidates to be nominated. Coded only for years where a gender quota was present.
RESPONSES:
Percent.
SCALE: Interval.
SOURCE(S): Quota Project (2025); **?**; **?**, coding by project manager.
DATA RELEASE: 9-16.
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v2lgqugen is 0

2.3.9 V-Dem Indicators - Deliberation

Instructions to the coders (as shown in the surveys)

Deliberation:

The following questions address the deliberative or non-deliberative nature of a country's politics, with particular focus on elite levels. Some of these questions focus on the quality of discourse and others focus on public policies.

2.3.9.1 Reasoned justification (v2dlreason)

Long tag: vdem_cy_v2dlreason

Original tag: v2dlreason

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:

VARIABLE TYPE: C

PROJECT MANAGER(S): Michael Coppedge, John Gerring, Staffan Lindberg
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When important policy changes are being considered, *i.e.* before a decision has been made, to what extent do political elites give public and reasoned justifications for their positions?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: No justification. Elites almost always only dictate that something should or should not be done, but no reasoning about justification is given. For example, quot;We must cut spending.quot;
1: Inferior justification. Elites tend to give reasons why someone should or should not be for doing or not doing something, but the reasons tend to be illogical or false, although they may appeal to many voters. For example, quot;We must cut spending. The state is inefficient.quot; [The inference is incomplete because addressing inefficiencies would not necessarily reduce spending and it might undermine essential services.]
2: Qualified justification. Elites tend to offer a single simple reason justifying why the proposed policies contribute to or detract from an outcome. For example, quot;We must cut spending because taxpayers cannot afford to pay for current programs.quot;
3: Sophisticated justification. Elites tend to offer more than one or more complex, nuanced and complete justification. For example, quot;We must cut spending because taxpayers cannot afford to pay for current government programs. Raising taxes would hurt economic growth, and deficit spending would lead to inflation.quot;
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Coppedge, John Gerring, Staffan Lindberg
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr

QUESTION: When important policy changes are being considered, to what extent do political elites justify their positions in terms of the common good?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: Little or no justification in terms of the common good is usually offered.
1: Specific business, geographic, group, party, or constituency interests are for the most part offered as justifications.
2: Justifications are for the most part a mix of specific interests and the common good and it is impossible to say which justification is more common than the other.
3: Justifications are based on a mixture of references to constituency/party/group interests and on appeals to the common good.
4: Justifications are for the most part almost always based on explicit statements of the common good for society, understood either as the greatest good for the greatest number or as helping the least advantaged in a society.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When important policy changes are being considered, to what extent do political elites acknowledge and respect counterarguments?
CLARIFICATION: Because discourse varies greatly from person to person, base your answer on the style that is most typical of prominent national political leaders.
RESPONSES:
0: Counterarguments are not allowed or if articulated, punished.
1: Counterarguments are allowed at least from some parties, but almost always are ignored.
2: Elites tend to acknowledge counterarguments but then explicitly degrade them by making

a negative statement about them or the individuals and groups that propose them.
3: Elites tend to acknowledge counterarguments without making explicit negative or positive statements about them.
4: Elites almost always acknowledge counterarguments and explicitly value them, even if they ultimately reject them for the most part.
5: Elites almost always acknowledge counterarguments and explicitly value them, and frequently also even accept them and change their position.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When important policy changes are being considered, how wide is the range of consultation at *elite levels*?
CLARIFICATION: Because practices vary greatly from policy to policy, base your answer on the style that is most typical of policymaking.
RESPONSES:
0: No consultation. The leader or a very small group (*e.g.* military council) makes authoritative decisions on their own.
1: Very little and narrow. Consultation with only a narrow circle of loyal party/ruling elites.
2: Consultation includes the former plus a larger group that is loyal to the government, such as the ruling party's or parties' local executives and/or women, youth and other branches.
3: Consultation includes the former plus leaders of other parties.
4: Consultation includes the former plus a select range of society/labor/business representatives.
5: Consultation engages elites from essentially all parts of the political spectrum and all politically relevant sectors of society and business.
SCALE: Ordinal, converted to interval by the measurement model.

DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When important policy changes are being considered, how wide and how independent are public deliberations?
CLARIFICATION: This question refers to deliberation as manifested in discussion, debate, and other public forums such as popular media.
RESPONSES:
0: Public deliberation is never, or almost never allowed.
1: Some limited public deliberations are allowed but the public below the elite levels is almost always either unaware of major policy debates or unable to take part in them.
2: Public deliberation is not repressed but nevertheless infrequent and non-elite actors are typically controlled and/or constrained by the elites.
3: Public deliberation is actively encouraged and some autonomous non-elite groups participate, but it is confined to a small slice of specialized groups that tends to be the same across issue-areas.
4: Public deliberation is actively encouraged and a relatively broad segment of non-elite groups often participate and vary with different issue-areas.
5: Large numbers of non-elite groups as well as ordinary people tend to discuss major policies among themselves, in the media, in associations or neighborhoods, or in the streets. Grass-roots deliberation is common and unconstrained.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Considering the profile of social and infrastructural spending in the national budget, how quot;particularisticquot; or quot;public goodsquot; are most expenditures?
CLARIFICATION: Particularistic spending is narrowly targeted on a specific corporation, sector, social group, region, party, or set of constituents. Such spending may be referred to as quot;porkquot;, quot;clientelisticquot;, or quot;private goods.quot;
Public-goods spending is intended to benefit all communities within a society, though it may be means-tested so as to target poor, needy, or otherwise underprivileged constituents. The key point is that all who satisfy the means-test are allowed to receive the benefit.
Your answer should consider the entire budget of social and infrastructural spending. We are interested in the relative value of particularistic and public-goods spending, not the number of bills or programs that fall into either category.
RESPONSES:
0: Almost all of the social and infrastructure expenditures are particularistic.
1: Most social and infrastructure expenditures are particularistic, but a significant portion (*e.g.* 1/4 or 1/3) is public-goods.
2: Social and infrastructure expenditures are evenly divided between particularistic and public-goods programs.
3: Most social and infrastructure expenditures are public-goods but a significant portion (*e.g.*, 1/4 or 1/3) is particularistic.
4: Almost all social and infrastructure expenditures are public-goods in character. Only a small portion is particularistic.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: How many welfare programs are means-tested and how many benefit all (or virtually all) members of the polity?
CLARIFICATION: A means-tested program targets poor, needy, or otherwise underprivileged constituents. Cash-transfer programs are normally means-tested.
A universal (non-means tested) program potentially benefits everyone. This includes free education, national health care schemes, and retirement programs. Granted, some may benefit more than others from these programs (*e.g.*, when people with higher salaries get higher unemployment benefits). The key point is that practically everyone is a beneficiary, or potential beneficiary.
The purpose of this question is not to gauge the size of the welfare state but rather its quality. So, your answer should be based on whatever programs exist.
RESPONSES:
0: There are no, or extremely limited, welfare state policies (education, health, retirement, unemployment, poverty programs).
1: Almost all of the welfare state policies are means-tested.
2: Most welfare state policies means-tested, but a significant portion (*e.g.* 1/4 or 1/3) is universalistic and potentially benefits everyone in the population.
3: The welfare state policies are roughly evenly divided between means-tested and universalistic.
4: Most welfare state policies are universalistic, but a significant portion (*e.g.*, 1/4 or 1/3) are means-tested.
5: Almost all welfare state policies are universal in character. Only a small portion is means-tested.
SCALE: Ordinal, converted to interval by the measurement model.

2.3.10 V-Dem Indicators - The Judiciary

Instructions to the coders (as shown in the surveys)

Judiciary: This set of questions pertains to the judiciary. Before you proceed, we would like to clarify several general points. First, some questions below refer to the judiciary in general, whereas others ask for specific evaluations of particular courts or types of courts. Unless otherwise prompted, please consider the judiciary as a whole. This includes all courts in the judicial system at every level, both general jurisdiction courts and more specialized courts. However, with potentially one exception, it excludes specialized courts that are located outside the judiciary, *e.g.* an immigration court that lies inside the executive branch. The one potential exception is the peak constitutional court of the country. Please include this court in your considerations, even though it will be located outside of the judiciary in some countries. If the country you are coding is a federal state, please focus only on the federal judiciary and the federal government.

Seven of the questions about the judiciary concern high courts. By "high court" we are asking you to consider the country's constitutional court, if one exists. If there is no constitutional court, please consider the court of last resort for constitutional matters. If there is no court in your country with constitutional jurisdiction, please consider the highest ordinary court of the state.

For example, in Mexico in 2004, you would consider the Supreme Court of Justice of the Nation and not the Electoral Tribunal for the Federal Judiciary. In Russia in the same year, you would consider the Constitutional Court of the Russian Federation and not the Supreme Court of the Russian Federation. In Sweden, you would ignore the Supreme Administrative Court and instead focus on the Supreme Court. Germany has both a constitutional court, the Federal Constitutional Court, and a court of last resort for ordinary matters, the Federal Court of Justice. The Federal Constitutional Court is the high court for our purposes. In the United States, there is no separate constitutional court or review body. The Supreme Court is both the highest ordinary court and the highest court in the state with constitutional jurisdiction. Therefore, we consider it to be the high court of the United States. smallskip If your country's highest judicial body has separate divisions, only one of which is dedicated to final constitutional review, please consider that division to be the high court if its judges are permanently assigned to that division only. For example, the Supreme Court of Justice of Costa Rica has four chambers. The Fourth Chamber reviews constitutional matters, its judges are appointed to it specifically and the other judges of the Supreme Court do not rotate onto the Fourth Chamber. Therefore, the high court for Costa Rica is the constitutional chamber of the Supreme Court of Justice.

If a new high court was established in a given year, please consider that court as the high court for the purposes of these questions only if the court was functioning for the majority of the calendar year. If a new high court was established in a given year, but did not start functioning until a subsequent year, please do not consider the new court as the high court until it was functioning for the majority of the given calendar year. If you are considering a semi sovereign territory, such as a colony, please answer this question with respect to the government or judicial bodies seated within the territory in question (*e.g.*, the governor-general and his local administration in a British colony or a Commonwealth country), not abroad (*e.g.*, the King/Queen or government of England).

In coding the following questions it is sometimes important to distinguish between formal rules (as stipulated by statute, legislative rules, the constitution, or common law precedent) and actual practice (what happens "on the ground"). In order to clarify the *de jure*/*de facto* distinction, we employ the terms "by law..." and "in practice..." Please pay close attention to these cues wherever you see them.

2.3.10.1 Judicial reform (v2jureform)

Long tag: vdem_cy_v2jureform

Original tag: v2jureform

QUESTION: Were the judiciary's formal powers altered this year in ways that affect its ability to control the arbitrary use of state authority?
CLARIFICATION: Evidence of this kind of reform could include the creation or removal of various forms of constitutional review, new rules increasing or decreasing access to the judiciary, changes in available judicial remedies, and any other formal institution (procedural or otherwise) that influences the ability of courts to control the arbitrary use of power.
RESPONSES:
0: The judiciary's ability to control arbitrary power was *reduced* via institutional reform.
1: There was no change to the judiciary's ability to control arbitrary power via institutional review.
2: The judiciary's ability to control arbitrary power was *enhanced* via institutional reform.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Judges are sometimes removed from their posts for cause, as when there is strong evidence of corruption; however, some judges are removed arbitrarily, typically for political reasons. With this distinction in mind, please describe the removal of judges that occurred this calendar year.
CLARIFICATION: The second and third response categories permit you to distinguish among limited arbitrary removals (*i.e.*, when only a few judges are targeted) by the political importance of the removal. For example, you may consider the arbitrary removal of a few high court judges as more important than the arbitrary removal of a few lower court judges.
RESPONSES:
0: There was a massive, arbitrary purge of the judiciary.
1: There were limited but very important arbitrary removals.
2: There were limited arbitrary removals.
3: Judges were removed from office, but there is no evidence that the removals were arbitrary.
4: Judges were not removed from their posts.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: The size of the judiciary is sometimes increased for very good reasons, as when judges are added to manage an increasing caseload; however, sometimes judges are added purely for political reasons. With this distinction in mind, please describe any increases in the size of the judiciary that occurred this calendar year.
CLARIFICATION: The second and third response categories permit you to distinguish among limited court packing efforts (*i.e.* when relatively few judgeships are added) by the political importance of the packing. For example, you may consider the packing of the high court to be more important than the packing of a lower court.
RESPONSES:
0: There was a massive, politically motivated increase in the number of judgeships across the entire judiciary.
1: There was a limited, politically motivated increase in the number of judgeships on very important courts.

2: There was a limited, politically motivated increase in the number of judgeships.
3: Judgeships were added to the judiciary, but there is no evidence that the increase was politically motivated; or there was no increase.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: A previous version of the variable contained category quot;4: There was no increasequot;. As of November 2014, all responses in category quot;4quot; are assigned to category quot;3quot;, since the two responses have the same meaning in practice.

QUESTION: When the high court in the judicial system is ruling in cases that are salient to the government, how often would you say that it makes decisions that merely reflect government wishes regardless of its sincere view of the legal record?
CLARIFICATION: We are seeking to identify autonomous judicial decision-making and its absence. Decisions certainly can reflect government wishes without quot;merely reflectingquot; those wishes, *i.e.* a court can be autonomous when its decisions support the

government's position. This is because a court can be fairly persuaded that the government's position is meritorious. By quot;merely reflect the wishes of the governmentquot; we mean that the court's own view of the record, its sincere evaluation of the record, is irrelevant to the outcome. The court simply adopts the government's position regardless of its sincere view of the record.
RESPONSES:
0: Always.
1: Usually.
2: About half of the time.
3: Seldom.
4: Never.
SCALE: Ordinal, converted to interval by the measurement model.

YEARS: 1901-2015

2.3.11 V-Dem Indicators - Civil Liberty

Instructions to the coders (as shown in the surveys)

Civil Liberty: The following questions are focused on actual practices (*de facto*) rather than formal legal or constitutional rights (*de jure*). Note that if there is significant variation in the respect for a particular civil liberty across the territory, the score should reflect the "average situation" across the territorial scope of the country unit (for each period) as defined in the coder instructions.

2.3.11.1 Freedom from torture (v2cltort)

QUESTION: Is there freedom from torture?
CLARIFICATION: Torture refers to the purposeful inflicting of extreme pain, whether mental or physical, with an aim to extract information or intimidate victims, who are in a state of incarceration. Here, we are concerned with torture practiced by state officials or other agents of the state (*e.g.*, police, security forces, prison guards, and paramilitary groups).
RESPONSES:
0: Not respected by public authorities. Torture is practiced systematically and is incited and approved by the leaders of government.
1: Weakly respected by public authorities. Torture is practiced frequently but is often not incited or approved by top leaders of government. At the same time, leaders of government are not actively working to prevent it.
2: Somewhat. Torture is practiced occasionally but is typically not approved by top leaders of government.
3: Mostly respected by public authorities. Torture is practiced in a few isolated cases but is not incited or approved by top government leaders.
4: Fully respected by public authorities. Torture is non-existent.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is there freedom from political killings?
CLARIFICATION: Political killings are killings by the state or its agents without due process of law for the purpose of eliminating political opponents. These killings are the result of deliberate use of lethal force by the police, security forces, prison officials, or other agents of the state (including paramilitary groups).
RESPONSES:
0: Not respected by public authorities. Political killings are practiced systematically and they are typically incited and approved by top leaders of government.
1: Weakly respected by public authorities. Political killings are practiced frequently and top leaders of government are not actively working to prevent them.
2: Somewhat respected by public authorities. Political killings are practiced occasionally but they are typically not incited and approved by top leaders of government.

QUESTION: Are adult men free from servitude and other kinds of forced labor?
CLARIFICATION: Involuntary servitude occurs when an adult is unable to quit a job s/he desires to leave — not by reason of economic necessity but rather by reason of employer's coercion. This includes labor camps but not work or service which forms part of normal civic obligations such as conscription or employment in command economies.
RESPONSES:
0: Male servitude or other kinds of forced labor is widespread and accepted (perhaps even organized) by the state.
1: Male servitude or other kinds of forced labor is substantial. Although officially opposed by the public authorities, the state is unwilling or unable to effectively contain the practice.
2: Male servitude or other kinds of forced labor exists but is not widespread and usually actively opposed by public authorities, or only tolerated in some particular areas or among particular social groups.
3: Male servitude or other kinds of forced labor is infrequent and only found in the criminal underground. It is actively and sincerely opposed by the public authorities.
4: Male servitude or other kinds of forced labor is virtually non-existent.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are adult women free from servitude and other kinds of forced labor?
CLARIFICATION: Involuntary servitude occurs when an adult is unable to quit a job s/he desires to leave — not by reason of economic necessity but rather by reason of employer's coercion. This includes labor camps but not work or service which forms part of normal civic obligations such as conscription or employment in command economies.

This question does not ask you to assess the *relative* freedom of men and women from forced labor. Thus, a country in which both men and women suffer the same conditions of servitude might be coded a (0) for women, even though there is equality across the sexes.
RESPONSES:
0: Female servitude or other kinds of forced labor is widespread and accepted (perhaps even organized) by the state.
1: Female servitude or other kinds of forced labor is substantial. Although officially opposed by the public authorities, the state is unwilling or unable to effectively contain the practice.
2: Female servitude or other kinds of forced labor exists but is not widespread and usually actively opposed by public authorities, or only tolerated in some particular areas or among particular social groups.
3: Female servitude or other kinds of forced labor is infrequent and only found in the criminal underground. It is actively and sincerely opposed by the public authorities.
4: Female servitude or other kinds of forced labor is virtually non-existent.

QUESTION: Are the laws of the land clear, well publicized, coherent (consistent with each other), relatively stable from year to year, and enforced in a predictable manner?
CLARIFICATION: This question focuses on the transparency and predictability of the laws of the land.
RESPONSES:
0: Transparency and predictability are almost non-existent. The laws of the land are created and/or enforced in completely arbitrary fashion.
1: Transparency and predictability are severely limited. The laws of the land are more often than not created and/or enforced in arbitrary fashion.

2: Transparency and predictability are somewhat limited. The laws of the land are mostly created in a non-arbitrary fashion but enforcement is rather arbitrary in some parts of the country.
3: Transparency and predictability are fairly strong. The laws of the land are usually created and enforced in a non-arbitrary fashion.
4: Transparency and predictability are very strong. The laws of the land are created and enforced in a non-arbitrary fashion.

QUESTION: Are public officials rigorous and impartial in the performance of their duties?
CLARIFICATION: This question focuses on the extent to which public officials generally abide by the law and treat like cases alike, or conversely, the extent to which public administration is characterized by arbitrariness and biases (*i.e.*, nepotism, cronyism, or discrimination).
The question covers the public officials that handle the cases of ordinary people. If no functioning public administration exists, the lowest score (0) applies.
RESPONSES:
0: The law is not respected by public officials. Arbitrary or biased administration of the law is rampant.
1: The law is weakly respected by public officials. Arbitrary or biased administration of the law is widespread.
2: The law is modestly respected by public officials. Arbitrary or biased administration of the law is moderate.
3: The law is mostly respected by public officials. Arbitrary or biased administration of the

law is limited.
4: The law is generally fully respected by the public officials. Arbitrary or biased administration of the law is very limited.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Do men enjoy secure and effective access to justice?
CLARIFICATION: This question specifies the extent to which men can bring cases before the courts without risk to their personal safety, trials are fair, and men have effective ability to seek redress if public authorities violate their rights, including the rights to counsel, defense, and appeal.
This question does not ask you to assess the *relative* access to justice men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and extremely limited — access to justice.
RESPONSES:
0: Secure and effective access to justice for men is non-existent.
1: Secure and effective access to justice for men is usually not established or widely respected.
2: Secure and effective access to justice for men is inconsistently observed. Minor problems characterize most cases or occur rather unevenly across different parts of the country.
3: Secure and effective access to justice for men is usually observed.
4: Secure and effective access to justice for men is almost always observed.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Do all social groups, as distinguished by language, ethnicity, religion, race, region, or caste, enjoy the same level of civil liberties, or are some groups generally in a more favorable position?
CLARIFICATION: Here, civil liberties are understood to include access to justice, private property rights, freedom of movement, and freedom from forced labor.
RESPONSES:
0: Members of some social groups enjoy much fewer civil liberties than the general population.
1: Members of some social groups enjoy substantially fewer civil liberties than the general population.
2: Members of some social groups enjoy moderately fewer civil liberties than the general population.
3: Members of some social groups enjoy slightly fewer civil liberties than the general population.
4: Members of all salient social groups enjoy the same level of civil liberties.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Does government respect for civil liberties vary across different areas of the country?
RESPONSES:
0: Yes. Government officials in some areas of the country respect civil liberties significantly more (or, alternatively, significantly less) than government officials in other areas of the country.
1: Somewhat. Government officials in some areas of the country respect civil liberties somewhat more (or, alternatively, somewhat less) than government officials in other areas of the country.
2: No. Government officials in most or all areas of the country equally respect (or, alternatively, equally do not respect) civil liberties.
ORDERING: If answer is quot;2quot; skip remaining civil liberties questions.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are men able to openly discuss political issues in private homes and in public spaces?
CLARIFICATION: This indicator specifies the extent to which men are able to engage in private discussions, particularly on political issues, in private homes and public spaces (restaurants, public transportation, sports events, work etc.) without fear of harassment by other members of the polity or the public authorities. We are interested in restrictions by the government and its agents but also cultural restrictions or customary laws that are enforced by other members of the polity, sometimes in informal ways.
This question does not ask you to assess the *relative* freedom of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and extremely low — rights to freedom of discussion.
RESPONSES:
0: Not respected. Hardly any freedom of expression exists for men. Men are subject to immediate and harsh intervention and harassment for expression of political opinion.
1: Weakly respected. Expressions of political opinions by men are frequently exposed to intervention and harassment.
2: Somewhat respected. Expressions of political opinions by men are occasionally exposed to intervention and harassment.
3: Mostly respected. There are minor restraints on the freedom of expression in the private sphere, predominantly limited to a few isolated cases or only linked to soft sanctions. But as a rule there is no intervention or harassment if men make political statements.
4: Fully respected. Freedom of speech for men in their homes and in public spaces is not restricted.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Is there academic freedom and freedom of cultural expression related to political issues?
RESPONSES:
0: Not respected by public authorities. Censorship and intimidation are frequent. Academic activities and cultural expressions are severely restricted or controlled by the government.
1: Weakly respected by public authorities. Academic freedom and freedom of cultural expression are practiced occasionally, but direct criticism of the government is mostly met with repression.
2: Somewhat respected by public authorities. Academic freedom and freedom of cultural expression are practiced routinely, but strong criticism of the government is sometimes met with repression.
3: Mostly respected by public authorities. There are few limitations on academic freedom and freedom of cultural expression, and resulting sanctions tend to be infrequent and soft.
4: Fully respected by public authorities. There are no restrictions on academic freedom or cultural expression.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Is there freedom of religion?
CLARIFICATION: This indicator specifies the extent to which individuals and groups have the right to choose a religion, change their religion, and practice that religion in private or in public as well as to proselytize peacefully without being subject to restrictions by public authorities.
RESPONSES:
0: Not respected by public authorities. Hardly any freedom of religion exists. Any kind of religious practice is outlawed or at least controlled by the government to the extent that religious leaders are appointed by and subjected to public authorities, who control the activities of religious communities in some detail.
1: Weakly respected by public authorities. Some elements of autonomous organized religious practices exist and are officially recognized. But significant religious communities are repressed, prohibited, or systematically disabled, voluntary conversions are restricted, and instances of discrimination or intimidation of individuals or groups due to their religion are common.
2: Somewhat respected by public authorities. Autonomous organized religious practices exist and are officially recognized. Yet, minor religious communities are repressed, prohibited, or systematically disabled, and/or instances of discrimination or intimidation of individuals or groups due to their religion occur occasionally.
3: Mostly respected by public authorities. There are minor restrictions on the freedom of religion, predominantly limited to a few isolated cases. Minority religions face denial of registration, hindrance of foreign missionaries from entering the country, restrictions against proselytizing, or hindrance to access to or construction of places of worship.
4: Fully respected by public authorities. The population enjoys the right to practice any religious belief they choose. Religious groups may organize, select, and train personnel; solicit and receive contributions; publish; and engage in consultations without undue interference. If religious communities have to register, public authorities do not abuse the process to discriminate against a religion and do not constrain the right to worship before registration.

QUESTION: Is there freedom of foreign travel and emigration?
CLARIFICATION: This indicator specifies the extent to which citizens are able to travel freely to and from the country and to emigrate without being subject to restrictions by public authorities.
RESPONSES:
0: Not respected by public authorities. Citizens are rarely allowed to emigrate or travel out of the country. Transgressors (or their families) are severely punished. People discredited by the public authorities are routinely exiled or prohibited from traveling.
1: Weakly respected by public authorities. The public authorities systematically restrict the right to travel, especially for political opponents or particular social groups. This can take the form of general restrictions on the duration of stays abroad or delays/refusals of visas.
2: Somewhat respected by the public authorities. The right to travel for leading political opponents or particular social groups is occasionally restricted but ordinary citizens only met minor restrictions.
3: Mostly respected by public authorities. Limitations on freedom of movement and residence are not directed at political opponents but minor restrictions exist. For example, exit visas may be required and citizens may be prohibited from traveling outside the country when accompanied by other members of their family.
4: Fully respected by the government. The freedom of citizens to travel from and to the country, and to emigrate and repatriate, is not restricted by public authorities.

QUESTION: Do men enjoy freedom of movement within the country?
CLARIFICATION: This indicator specifies the extent to which all men are able to move freely, in daytime and nighttime, in public thoroughfares, across regions within a country, and to establish permanent residency where they wish. Note that restrictions in movement might be imposed by the state and/or by informal norms and practices. Such restrictions sometimes fall on rural residents, on specific social groups, or on dissidents.
This question does not ask you to assess the *relative* freedom of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and extremely low — freedom of movement.
Do *not* consider restrictions in movement that are placed on ordinary (non-political) criminals. Do not consider restrictions in movement that result from crime or unrest.
RESPONSES:
0: Virtually no men enjoy full freedom of movement (*e.g.*, North Korea).
1: Some men enjoy full freedom of movement, but most do not (*e.g.*, Apartheid South Africa).
2: Most men enjoy some freedom of movement but a sizeable minority does not. Alternatively all men enjoy partial freedom of movement.
3: Most men enjoy full freedom of movement but a small minority does not.
4: Virtually all men enjoy full freedom of movement.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Does the state own or directly control important sectors of the economy?
CLARIFICATION: This question gauges the degree to which the state owns and controls capital (including land) in the industrial, agricultural, and service sectors.
It does *not* measure the extent of government revenue and expenditure as a share of total output; indeed, it is quite common for states with expansive fiscal policies to exercise little direct control (and virtually no ownership) over the economy.
RESPONSES:
0: Virtually all valuable capital belongs to the state or is directly controlled by the state. Private property may be officially prohibited.
1: Most valuable capital either belongs to the state or is directly controlled by the state.
2: Many sectors of the economy either belong to the state or are directly controlled by the state, but others remain relatively free of direct state control.
3: Some valuable capital either belongs to the state or is directly controlled by the state, but most remains free of direct state control.
4: Very little valuable capital belongs to the state or is directly controlled by the state.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Do men enjoy the right to private property?
CLARIFICATION: Private property includes the right to acquire, possess, inherit, and sell private property, including land. Limits on property rights may come from the state (which may legally limit rights or fail to enforce them); customary laws and practices; or religious or social norms. This question concerns the right to private property, not actual ownership of property.
This question does not ask you to assess the *relative* rights of men and women. Thus, it is possible to assign the lowest possible score to a country even if men and women enjoy equal — and very minimal — property rights.
RESPONSES:
0: Virtually no men enjoy private property rights of any kind.
1: Some men enjoy some private property rights, but most have none.
2: Many men enjoy many private property rights, but a smaller proportion enjoys few or none.
3: More than half of men enjoy most private property rights, yet a smaller share of men have much more restricted rights.
4: Most men enjoy most private property rights but a small minority does not.
5: Virtually all men enjoy all, or almost all property rights.

2.3.12 V-Dem Indicators - Sovereignty and State

Instructions to the coders (as shown in the surveys)

Sovereignty: This section addresses a number of issues concerning the sovereignty of the state. A state is political organization that organizes compulsory domination over a fixed territory on a continual basis. With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Here, we are interested in the state's autonomy from other actors in the system. The second component of sovereignty concerns the relationship of the state to the population and territory over which it claims to rule. Here, we want to gauge the extent of recognition of the preeminent authority of the state over its claimed territory and population.

Sovereignty – Historical clarification: This section addresses a number of issues concerning the state. A state is a political organization that organizes compulsory domination over a fixed territory on a continual basis. The questions concern two general themes: state sovereignty and state administration.

With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Here, we are

interested in the state's autonomy from and recognition by other actors in the system. The second component of sovereignty concerns the relationship of the state to the population and territory over which it claims to rule. Here, we want to gauge the extent of recognition of the preeminent authority of the state over its claimed territory and population.

A second attribute of states is the state administration: the set of institutions that administer and implement governmental decisions. Here we are mainly interested in the professionalization, or lack thereof, of the state administrative staff – in this context termed the state administrators.

The State: "This section addresses a number of issues concerning the state. A state is a political organization that organizes compulsory domination over a fixed territory on a continual basis. The questions concern two general themes: state sovereignty and state administration.

With respect to state sovereignty, we are interested in measuring two distinct areas of sovereignty. The first is an attribute of states within the context of the international system. Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the state autonomous from the control of other states with respect to the conduct of domestic policy?
CLARIFICATION: The question of domestic autonomy does not include restrictions emanating from treaties (*e.g.*, NATO), international organizations (*e.g.*, the WTO), or confederations (*e.g.*, the European Union) if these agreements are freely negotiated by the state and if the state is free to exit from that treaty, organization, or confederation. Nor does it include restrictions on policymaking emanating from international market forces and trans-national corporations.
RESPONSES:
0: Non-autonomous. National level authority is exercised by an external power, either by law or in practice. The most common examples of this are direct colonial rule and military occupation (*e.g.* quadripartite occupation of Germany in 1945). It also includes situations in which domestic actors provide *de jure* cover for *de facto* control by a foreign power (*e.g.* Vichy France). However, control of some part of the territory of a state by an enemy during war is not considered control by external actors if the sovereign government remains on scene

and continues to wage conventional war (*e.g.*, the USSR during WW II).
1: Semi-autonomous. An external political actor directly constrains the ability of domestic actors to rule, decides who can or cannot rule through formal rules or informal understandings, or precludes certain policies through explicit treaty provisions or well-understood rules of the game from which the subject state cannot withdraw. Examples include Soviet quot;satellitequot; states in Eastern Europe, and situations where colonial powers grant limited powers of national self-government to their possessions (*e.g.*, protectorates and limited home government).
2: Autonomous. Domestic political actors exercise political authority free of the direct control of external political actors.

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the state autonomous from the control of other states with respect to the conduct of its foreign policy?
RESPONSES:
0: Non-autonomous. Foreign policy is controlled by an external power, either *de facto* or *de jure*. The most common examples of this are colonial rule and military occupation (*e.g.* quadripartite occupation of Germany in 1945). Situations in which domestic actors provide *de jure* cover for *de facto* control by a foreign power should not be construed as semi-autonomy (*e.g.* Vichy France). Governments in exile that control underground forces waging unconventional warfare are not considered as mitigating an occupation regime (*e.g.* countries under German occupation during WWII).
1: Semi-autonomous. An external political actor directly constrains the ability of domestic actors to pursue an independent foreign policy course in some important areas. This may be the product of explicit treaty provisions or well-understood rules of the game from which the

subject state cannot withdraw. Examples would include Soviet strictures over rule in so-called quot;satellitequot; states in Eastern Europe, and explicitly negotiated postwar settlements (*e.g.* Austria following WWII).
2: Autonomous. Domestic political actors exercise foreign policy free of the direct control of external political actors. Direct control is meant to exclude the exercise of constraint or the impact of interdependence in the international system. Treaties in which states concede some part of that control to a supra- or international organization voluntarily, and from which there is a possibility of exit should not be interpreted as a violation of autonomy.

QUESTION: Over what percentage (percent) of the territory does the state have effective control?
CLARIFICATION: With this question we seek to judge the extent of recognition of the preeminent authority of the state over its territory. We are not interested here in perfect control by the state, or whether it is relatively effective in comparison to other states, but an assessment of the areas over which it is hegemonic, *e.g.* where it is recognized as the preeminent authority and in a contest of wills it can assert its control over political forces that reject its authority. Several illustrative examples may help in this coding. During civil wars the claim of the state to rule is effectively neutralized by insurgent groups (*e.g.*, the Tamil Tigers in Sri Lanka). There are also situations in which criminals or warlords exert control in contravention of state authority (*e.g.* opium growers in parts of Indochina). There are also cases of failed states where the central government cannot assert control over a share of its territory (*e.g.*, contemporary Somalia). Here, we ask you to estimate the size of the territory that the state has effective control over, as a percentage (percent) of the total territory that is officially part of the country.

By quot;officially part of the countryquot; we refer to international law. In cases where international law is not entirely clear, we refer you to general understandings. For example, China claims sovereignty over Taiwan, but it remains under the control of its own government. For purposes of this question, Taiwan should not be considered a failure to control its territory by the government of the PRC.

QUESTION: On which of the following sources of revenue does the central government primarily rely to finance its activities?
RESPONSES:
0: The state is not capable of raising revenue to finance itself.
1: The state primarily relies on external sources of funding (loans and foreign aid) to finance its activities.
2: The state primarily relies on directly controlling economic assets (natural resource rents, public monopolies, and the expropriation of assets within and outside the country) to finance its activities.
3: The state primarily relies on taxes on property (land taxes) and trade (customs duties).
4: The state primarily relies on taxes on economic transactions (such as sales taxes) and/or taxes on income, corporate profits and capital.

Inter-Parliamentary Union (IPU) (2025)

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Svend-Erik Skaaning, Michael Bernhard
QUESTION: Is the polity an independent state?
CLARIFICATION: We use Gleditsch and Ward's (1999) coding of independent states. Their definition recognizes that listing independent states relies at least in part on subjective evaluations. A state is considered to be an independent polity if it (a) has a relatively autonomous administration over some territory, (b) is considered a distinct entity by local actors or the state it is dependent on. Polities excluded from the list are: colonies; states that have some form of limited autonomy (*e.g.* Scotland); are alleged to be independent but are contiguous to the dominant entity (Ukraine and Belarus prior to 1991); *de facto* independent polities but recognized by at most one other state (Turkish Republic of Northern Cyprus). Occupations or foreign rule are considered to be an actual loss of statehood when they extend beyond a decade. This means that cases such as the Baltic Republic during Soviet occupation are not considered independent states, but independent statehood is retained for European countries occupied during World War II.
RESPONSES:
0: No
1: Yes
SCALE: Dichotomous.
SOURCE(S): **?**,**?**; **?**; **?**.
NOTES: V-Dem uses the updated List of independent states (v.5.0), including the tentative list of microstates, posted on Gleditsch's webpage on 14 March 2013. We have reconciled Gleditsch and Ward's data with the V-Dem country definitions (see the document quot;V-Dem Countries v1.1quot;).

2.3.13 V-Dem Indicators - Civil Society

Instructions to the coders (as shown in the surveys)

Civil society organization:

The following set of questions focus on civil society organizations (CSOs). These include interest groups, labor unions, religiously inspired organizations (if they are engaged in civic or political activities), social movements, professional associations, and classic non-governmental organizations (NGOs), but *not* businesses, political parties, government agencies, or religious organizations that are primarily focused on spiritual practices. A CSO must also be at least nominally independent of government and economic institutions.

Civil society organization – Historical clarification: The following set of questions focus on civil society organizations (CSOs). These include interest groups, labor unions, religiously inspired organizations (if they are engaged in civic or political activities), social movements, professional associations, and classic non-governmental organizations (NGOs), but not businesses, political parties, government agencies, or religious organizations that are primarily focused on spiritual practices. A CSO must also be at least nominally independent of government and economic institutions.

If no CSOs exist at all for a particular time period, code the following relevant questions as giving the "lowest score" (indicating, for instance, strong repression or no consultation, a 0).

Religious organizations: In this section, we ask two questions regarding religious organizations. These may be religiously inspired civil society organizations (CSOs) or organizations whose purpose is primarily spiritual.

2.3.13.1 CSO entry and exit (v2cseeorgs)

QUESTION: To what extent does the government achieve control over entry and exit by civil society organizations (CSOs) into public life?
RESPONSES:
0: Monopolistic control. The government exercises an explicit monopoly over CSOs. The only organizations allowed to engage in political activity such as endorsing parties or politicians, sponsoring public issues forums, organizing rallies or demonstrations, engaging in strikes, or publicly commenting on public officials and policies are government-sponsored organizations. The government actively represses those who attempt to defy its monopoly on political activity.
1: Substantial control. The government licenses all CSOs and uses political criteria to bar organizations that are likely to oppose the government. There are at least some citizen-based organizations that play a limited role in politics independent of the government. The government actively represses those who attempt to flout its political criteria and bars them from any political activity.
2: Moderate control. Whether the government ban on independent CSOs is partial or full, some prohibited organizations manage to play an active political role. Despite its ban on organizations of this sort, the government does not or cannot repress them, due to either its weakness or political expedience.
3: Minimal control. Whether or not the government licenses CSOs, there exist constitutional provisions that allow the government to ban organizations or movements that have a history of anti-democratic action in the past (*e.g.* the banning of neo-fascist or communist organizations in the Federal Republic of Germany). Such banning takes place under strict rule of law and conditions of judicial independence.
4: Unconstrained. Whether or not the government licenses CSOs, the government does not impede their formation and operation unless they are engaged in activities to violently overthrow the government.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Does the government attempt to repress civil society organizations (CSOs)?
RESPONSES:
0: Severely. The government violently and actively pursues all real and even some imagined members of CSOs. They seek not only to deter the activity of such groups but to effectively liquidate them. Examples include Stalinist Russia, Nazi Germany, and Maoist China.
1: Substantially. In addition to the kinds of harassment outlined in responses 2 and 3 below, the government also arrests, tries, and imprisons leaders of and participants in oppositional CSOs who have acted lawfully. Other sanctions include disruption of public gatherings and violent sanctions of activists (beatings, threats to families, destruction of valuable property). Examples include Mugabe's Zimbabwe, Poland under Martial Law, Serbia under Milosevic.
2: Moderately. In addition to material sanctions outlined in response 3 below, the government also engages in minor legal harassment (detentions, short-term incarceration) to dissuade CSOs from acting or expressing themselves. The government may also restrict the scope of their actions through measures that restrict association of civil society organizations with each other or political parties, bar civil society organizations from taking certain actions, or block international contacts. Examples include post-Martial Law Poland, Brazil in the early 1980s, the late Franco period in Spain.
3: Weakly. The government uses material sanctions (fines, firings, denial of social services) to deter oppositional CSOs from acting or expressing themselves. They may also use burdensome registration or incorporation procedures to slow the formation of new civil society organizations and sidetrack them from engagement. The government may also organize Government Organized Movements or NGOs (GONGOs) to crowd out independent organizations. One example would be Singapore in the post-Yew phase or Putin's Russia.
4: No. Civil society organizations are free to organize, associate, strike, express themselves, and to criticize the government without fear of government sanctions or harassment.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: For reasons of consistency, as of December 2014, responses to this question are reversed so that the least democratic response is "0" and the most democratic is "4".

QUESTION: Are major civil society organizations (CSOs) routinely consulted by policymakers on policies relevant to their members?
RESPONSES:
0: No. There is a high degree of insulation of the government from CSO input. The government may sometimes enlist or mobilize CSOs after policies are adopted to sell them to the public at large. But it does not often consult with them in formulating policies.
1: To some degree. CSOs are but one set of voices that policymakers sometimes take into account.
2: Yes. Important CSOs are recognized as stakeholders in important policy areas and given voice on such issues. This can be accomplished through formal corporatist arrangements or through less formal arrangements.

QUESTION: Among civil society organizations, are there anti-system opposition movements?
CLARIFICATION: An anti-system opposition movement is any movement — peaceful or armed — that is based in the country (not abroad) and is organized in opposition to the current political system. That is, it aims to change the polity in fundamental ways, *e.g.*, from democratic to autocratic (or vice-versa), from capitalist to communist (or vice-versa), from secular to fundamentalist (or vice-versa). This movement may be linked to a political party that competes in elections but it must also have a quot;movementquot; character, which is to

say a mass base and an existence separate from normal electoral competition.
If there are several movements, please answer in a general way about the relationship of those movements to the regime.
RESPONSES:
0: No, or very minimal. Anti-system movements are practically nonexistent.
1: There is only a low-level of anti-system movement activity but it does not pose much of a threat to the regime.
2: There is a modest level of anti-system movement activity, posing some threat to the regime.
3: There is a high level of anti-system movement activity, posing substantial threat to the regime.
4: There is a very high level of anti-system movement activity, posing a real and present threat to the regime.
ORDERING: If coded quot;0quot;, skip the following questions focused on anti-system movements.

QUESTION: How would you characterize the anti-system movement(s) identified in the previous question?
CLARIFICATION: Check all that apply.
RESPONSES:
0: Works through legal channels, for the most part. (0=No, 1=Yes) [v2csanmvch_0]
1: Participates in elections. (0=No, 1=Yes) [v2csanmvch_1]
2: Works through a mix of legal and extra-legal channels. (0=No, 1=Yes) [v2csanmvch_2]
3: Insurrectionary. (0=No, 1=Yes) [v2csanmvch_3]
4: Democratic. Perceived by most disinterested observers as willing to play by the rules of the democratic game, willing to respect constitutional provisions or electoral outcomes, and willing to relinquish power (under democratic auspices). (0=No, 1=Yes) [v2csanmvch_4]
5: Anti-democratic. Perceived by most disinterested observers as unwilling to play by the rules of the democratic game, not willing to respect constitutional provisions or electoral outcomes, and/or not willing to relinquish power (under democratic auspices). (0=No, 1=Yes) [v2csanmvch_5]
6: Leftist, socialist, communist. (0=No, 1=Yes) [v2csanmvch_6]
7: Rightist, conservative, party of order. (0=No, 1=Yes) [v2csanmvch_7]
8: Ethnolinguistic, tribe, kinship, clan. (0=No, 1=Yes) [v2csanmvch_8]
9: Separatist or autonomist. (0=No, 1=Yes) [v2csanmvch_9]
10: Religious. (0=No, 1=Yes) [v2csanmvch_10]
11: Paramilitary. (0=No, 1=Yes) [v2csanmvch_11]
12: Heavily engaged in criminal activity, *e.g.*, narcotics, bootlegging, illegal exploitation of

natural resources, extortion, kidnapping. (0=No, 1=Yes) [v2csanmvch_12]
SCALE: Mean-aggregated scores of dichotomized variable.
ANSWER-TYPE: Multiple-selection.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Mean.

PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_nr
QUESTION: Civil societies inevitably involve a mix of larger and smaller organizations. Please characterize the relative influence of large mass constituency civil society organizations (CSOs) versus smaller, more local, or narrowly construed CSOs.
RESPONSES:
0: The state does not allow autonomous CSOs. (0=No, 1=Yes) [v2csstruc_0]
1: Large encompassing organizations dominate. The government and CSOs are linked formally through a corporatist system of interest intermediation; or, due to historical circumstances, particular large CSOs are highly influential. The voice of such organizations is recognized by the government and is accorded special weight by policymakers. (0=No, 1=Yes) [v2csstruc_1]
2: Neither large encompassing nor small CSOs dominate. Influence is contingent on circumstances. Organizations, both large and small, contend with one another to have their voice considered by policymakers. (0=No, 1=Yes) [v2csstruc_2]
3: Small CSOs dominate. Many small organizations contend with one another to have their voices heard by policymakers. (0=No, 1=Yes) [v2csstruc_3]
SCALE: Mean-aggregated scores of dichotomized variable.
DATA RELEASE: 1-16.

2.3.14 V-Dem Indicators - The Media

Instructions to the coders (as shown in the surveys)

Media: Two types of media are distinguished in this section: (1) print (newspapers and magazines) and broadcast (radio and television), and (2) online media. We ask that you evaluate these categories as a whole. Thus, "the print and broadcast media" can provide a wide range of perspectives in a country even when individual publications or programs take a consistently narrow perspective.

Historical clarification: Two types of media are distinguished in this section: (1) print (newspapers and magazines) and (2) broadcast (radio) media. The latter is, however, only for reference to the contemporary era, and should of course be ignored before it appeared. But when applicable, we ask that you evaluate these categories as a whole. If there is no print or broadcast media at all in a given time period, leave the following questions blank (missing) for this time period. Please also explicitly note in the comments section at the end for which years there was no print or broadcast media at all.

2.3.14.1 Government censorship effort - Media (v2mecenefm)

Long tag: vdem_cy_v2mecenefm

Original tag: v2mecenefm

QUESTION: Does the government directly or indirectly attempt to censor the print or broadcast media?
CLARIFICATION: Indirect forms of censorship might include politically motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities and distribution networks, selected distribution of advertising, onerous registration requirements, prohibitive tariffs, and bribery.
We are not concerned with censorship of non-political topics such as child pornography, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political speech.
RESPONSES:
0: Attempts to censor are direct and routine.
1: Attempts to censor are indirect but nevertheless routine.
2: Attempts to censor are direct but limited to especially sensitive issues.
3: Attempts to censor are indirect and limited to especially sensitive issues.
4: The government rarely attempts to censor major media in any way, and when such exceptional attempts are discovered, the responsible officials are usually punished.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*)

PROJECT MANAGER(S): Michael Coppedge
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the government attempt to censor information (text, audio, or visuals) on the Internet?
CLARIFICATION: Censorship attempts include Internet filtering (blocking access to certain websites or browsers), denial-of-service attacks, and partial or total Internet shutdowns. We are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political information or opinions. We are also not concerned with the *extent* of internet access, unless there is absolutely no access at all (in which case the coding should be 0).
RESPONSES:
0: The government successfully blocks Internet access except to sites that are pro-government or devoid of political content.
1: The government attempts to block Internet access except to sites that are pro-government or devoid of political content, but many users are able to circumvent such controls.
2: The government allows Internet access, including to some sites that are critical of the government, but blocks selected sites that deal with especially politically sensitive issues.
3: The government allows Internet access that is unrestricted, with the exceptions mentioned above.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: As of December 2014, the former category quot;0 There is no internetquot; is coded separately as v2mecenefibin. The variable is then rebased to zero.

QUESTION: Is there media bias against opposition parties or candidates?
CLARIFICATION: We ask you to take particular care in rating the year-to-year variation on this question if media bias tends to increase or decrease in election years. Coverage can be considered quot;more or less impartialquot; when the media as a whole present a mix of positive and negative coverage of each party or candidate.

RESPONSES:
0: The print and broadcast media cover only the official party or candidates, or have no political coverage, or there are no opposition parties or candidates to cover.
1: The print and broadcast media cover more than just the official party or candidates but all the opposition parties or candidates receive only negative coverage.
2: The print and broadcast media cover some opposition parties or candidates more or less impartially, but they give only negative or no coverage to at least one newsworthy party or candidate.
3: The print and broadcast media cover opposition parties or candidates more or less impartially, but they give an exaggerated *amount* of coverage to the governing party or candidates.
4: The print and broadcast media cover all newsworthy parties and candidates more or less impartially and in proportion to their newsworthiness.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

QUESTION: Do journalists, publishers, or broadcasters accept payments in exchange for altering news coverage?
RESPONSES:
0: The media are so closely directed by the government that any such payments would be either unnecessary to ensure pro-government coverage or ineffective in producing anti-government coverage.
1: Journalists, publishers, and broadcasters routinely alter news coverage in exchange for payments.
2: It is common, but not routine, for journalists, publishers, and broadcasters to alter news coverage in exchange for payments.

3: It is not normal for journalists, publishers, and broadcasters to alter news coverage in exchange for payments, but it happens occasionally, without anyone being punished.
4: Journalists, publishers, and broadcasters rarely alter news coverage in exchange for payments, and if it becomes known, someone is punished for it.
SCALE: Ordinal, converted to interval by the measurement model.

2.3.15 V-Dem Indicators - Political Equality

Instructions to the coders (as shown in the surveys)

Political Equality: This section pertains to political equality, that is, the extent to which members of a polity possess equal political power. It does not refer to the inevitable differentiation in power that occurs in all large societies between those who hold positions of power within the state (political elites) and lay citizens. It is, rather, about the distribution of political power among identifiable groups within the population.

What does it mean for a group of individuals to wield real political power? Although political power cannot be directly observed, one can infer that groups possess power to the extent that they: (a) actively participate in politics (by voting, etc.), (b) are involved in civil society organizations, (c) secure representation in government, (d) are able to set the political agenda, (e) influence political decisions, and (f) influence the implementation of those decisions. Please consider all these factors when answering the following questions. (Of course, the picture across these different dimensions may be mixed; your response should indicate the overall picture, taking all aspects of political power into account.)

2.3.15.1 Power distributed by socioeconomic position (v2pepwrses)

Long tag: vdem_cy_v2pepwrses

Original tag: v2pepwrses

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is political power distributed according to socioeconomic position?

CLARIFICATION: All societies are characterized by some degree of economic (wealth and income) inequality. In some societies, income and wealth are distributed in a grossly unequal fashion. In others, the difference between rich and poor is not so great. Here, we are concerned not with the degree of social inequality but rather with the political effects of this inequality. Specifically, we are concerned with the extent to which wealth and income translates into political power.
RESPONSES:
0: Wealthy people enjoy a virtual monopoly on political power. Average and poorer people have almost no influence.
1: Wealthy people enjoy a dominant hold on political power. People of average income have little say. Poorer people have essentially no influence.
2: Wealthy people have a very strong hold on political power. People of average or poorer income have some degree of influence but only on issues that matter less for wealthy people.
3: Wealthy people have more political power than others. But people of average income have almost as much influence and poor people also have a significant degree of political power.
4: Wealthy people have no more political power than those whose economic status is average or poor. Political power is more or less equally distributed across economic groups.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is political power distributed according to social groups?
CLARIFICATION: A social group is differentiated within a country by caste, ethnicity, language, race, region, religion, or some combination thereof. (It does *not* include identities grounded in sexual orientation or socioeconomic status.) Social group identity is contextually defined and is likely to vary across countries and through time. Social group identities are

also likely to cross-cut, so that a given person could be defined in multiple ways, *i.e.*, as part of multiple groups. Nonetheless, at any given point in time there are social groups within a society that are understood — by those residing within that society — to be different, in ways that may be politically relevant.
RESPONSES:
0: Political power is monopolized by one social group comprising a minority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
1: Political power is monopolized by several social groups comprising a minority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
2: Political power is monopolized by several social groups comprising a majority of the population. This monopoly is institutionalized, *i.e.*, not subject to frequent change.
3: Either all social groups possess some political power, with some groups having more power than others; or different social groups alternate in power, with one group controlling much of the political power for a period of time, followed by another — but all significant groups have a turn at the seat of power.
4: All social groups have roughly equal political power *or* there are no strong ethnic, caste, linguistic, racial, religious, or regional differences to speak of. Social group characteristics are not relevant to politics.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 1-16.

2.3.15.4 Power distributed by sexual orientation (v2pepwrort)

Long tag: vdem_cy_v2pepwrort

Original tag: v2pepwrort

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent is political power distributed according to sexual orientation?
CLARIFICATION: This question contrasts (A) the political power of heterosexuals and lesbian, gay, bisexual, and transgender (LGBT) members of the polity who are not open about their sexuality with (B) the political power of lesbian, gay, bisexual, and transgender (LGBT) members of the polity who are open about their sexuality. (A) will be referred to as quot;heterosexualquot; and (B) as quot;LGBT.quot;
Note that in comparing the political power of these two groups we are comparing their power per person. So, when we say that LGBT have less, equal, or more power than heterosexuals we mean relative to their share of the population (as near as this can be estimated).
RESPONSES:
0: LGBTs are entirely excluded from the public sphere and thus deprived of any real political power (even though they may possess formal powers such as the ballot).
1: LGBTs have much less political power than heterosexuals. LGBTs enjoy formal rights to participate in politics but are subject to informal norms that often serve to exclude them from the halls of power.
2: LGBTs have somewhat less political power than heterosexual citizens.
3: LGBTs have about the same political power as heterosexuals. Each group enjoys a degree of political power that is roughly proportional to their population.
4: LGBTs enjoy somewhat more political power than heterosexuals by virtue of greater wealth, education, and high level of organization and mobilization.
SCALE: Ordinal, converted to interval by the measurement model.

DATA RELEASE: 1-16.

QUESTION: To what extent is high quality basic education guaranteed to all, sufficient to enable them to exercise their basic rights as adult citizens?
CLARIFICATION: Basic education refers to ages typically between 6 and 16 years of age but this varies slightly among countries.
RESPONSES:
0: Extreme. Provision of high quality basic education is extremely unequal and at least 75 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
1: Unequal. Provision of high quality basic education is extremely unequal and at least 25 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
2: Somewhat equal. Basic education is relatively equal in quality but ten to 25 percent (percent) of children receive such low-quality education that undermines their ability to exercise their basic rights as adult citizens.
3: Relatively equal. Basic education is overall equal in quality but five to ten percent (percent) of children receive such low-quality education that probably undermines their ability to exercise their basic rights as adult citizens.
4: Equal. Basic education is equal in quality and less than five percent (percent) of children receive such low-quality education that probably undermines their ability to exercise their basic rights as adult citizens.
SCALE: Ordinal, converted to interval by the measurement model.

2.3.16 V-Dem Indicators - Exclusion

Instructions to the coders (as shown in the surveys)

Exclusion:

The following survey contains questions pertaining to exclusion. Political, economic and social well-being may depend on whether groups or individuals are excluded from positions of power, the state's protection of rights and freedoms, access to public goods and services, and opportunities to work or do business with the state.

Please bear in mind the following definitions as you respond to questions on this survey:

Exclusion is when individuals are denied access to services or participation in governed spaces based on their identity or belonging to a particular group. It is not necessary for all members of a group to be excluded in order for group-based exclusion to occur. Exclusion occurs even when only a single individual is excluded based on her or his identity or membership (perceived or actual) in a particular group.

Political groups are defined as those who are affiliated with a particular political party or candidate, or a group of parties/candidates. A common form of partisan exclusion is when state services or regulations are implemented in a way that seeks to reward the incumbent's political supporters and punish non-supporters.

Socio-Economic position defines groups based on attributes of wealth, occupation, or other economic circumstances such as owning property. Exclusion of economic groups occurs when, for example, those who are not property owners are restricted from voting, or when fees associated with justice, health or education are set at a rate that is unaffordable for poorer individuals.

Social group is differentiated within a country by caste, ethnicity, language, race, region, religion, migration status, or some combination thereof. (It does not include identities grounded in sexual orientation, gender, or socioeconomic status.) Social group identity is contextually defined and is likely to vary across countries and through time. Social group identities are also likely to cross-cut, so that a given person could be defined in multiple ways, i.e., as part of multiple groups. Nonetheless, at any given point in time there are social groups within a society that are understood - by those residing within that society - to be different, in ways that may be politically relevant. Contrast Identity group.

Geographic group refers to those living in rural or urban areas. Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer and there is access to a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road. (World Development Report, 2009: 54).

2.3.16.1 Access to public services distributed by socio-economic position (v2peapsecon)

QUESTION: Is access to basic public services, such as order and security, primary education, clean water, and healthcare, distributed equally according to socioeconomic position?

CLARIFICATION: This question asks if socio-economic position is an important cleavage in society for the distribution of public services. Thus, if there are inequalities in access to public services, but these are not mainly due to differentiation between particular socio-economic position, the code should be "4" (equal). The situation could of course vary by type of public service, such that a socio-economic group is denied access to some basic public services but not others. Please base your response on whether access to most of the aforementioned services are distributed equally or unequally.
RESPONSES:
0: Extreme. Because of poverty or low income, 75 percent (percent) or more of the population lack access to basic public services of good quality.
1: Unequal. Because of poverty or low income, 25 percent (percent) or more of the population lack access to basic public services of good quality.
2: Somewhat Equal. Because of poverty or low income, 10 to 25 percent (percent) of the population lack access to basic public services of good quality.
3: Relatively Equal. Because of poverty or low income, 5 to 10 percent (percent) of the population lack access to basic public services of good quality.
4: Equal. Because of poverty or low income, less than 5 percent (percent) of the population lack access to basic public services of good quality.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are state business opportunities equally available to qualified individuals or firms regardless of gender?
CLARIFICATION: State business opportunities refer to the ability to compete for or receive a public procurement contract, to partner with the government in public-private partnerships, etc.
RESPONSES:
0: Extreme. Because of their gender, 75 percent (percent) or more of women, even if qualified, lack access to state business opportunities.
1: Unequal. Because of their gender, 25 percent (percent) or more of women, even if qualified, lack access to state business opportunities.
2: Somewhat Equal. Because of their gender, 10 to 25 percent (percent) of women, even if qualified, lack access to state business opportunities.
3: Relatively Equal. Because of their gender, 5 to 10 percent (percent) of women, even if qualified, lack access to state business opportunities.
4: Equal. Because of their gender, 5 percent (percent) of women, even if qualified, lack access to state business opportunities.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is political power distributed according to urban-rural location?
CLARIFICATION: Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer, there is access to a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road. (World Development Report, 2009: 54)
RESPONSES:
0: People living in urban areas have a near-monopoly on political power.
1: People living in urban areas have a dominant hold on political power. Those living in rural areas have only marginal influence.
2: People living in urban areas have much more political power but those living in rural areas have some areas of influence.
3: People living in urban areas have somewhat more political power than those living in rural areas.
4: People living in any area have roughly equal political power or people living in rural areas have more access to political power than those in urban areas.
5: People living in rural areas have much more political power but those living in urban areas have some areas of influence.

QUESTION: Do those who reside in rural areas enjoy same level of civil liberties as those residing in urban areas?
CLARIFICATION: This question specifies the extent to which the level of civil liberties is generally the same across geographic areas. Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer, there is access to a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road (World Development Report, 2009: 54). Here, civil liberties are understood to include access to justice, private property rights, freedom of movement, and freedom from forced labor.
RESPONSES:
0: Those who live in rural areas enjoy much fewer civil liberties than residents of urban areas.
1: Those who live in rural areas enjoy substantially fewer civil liberties than residents of urban areas.
2: Those who live in rural areas enjoy moderately fewer civil liberties than residents of urban areas.
3: Those who live in rural areas enjoy slightly fewer civil liberties than residents of urban areas.
4: Residents of rural areas enjoy the same level of civil liberties as those in urban areas.
5: Residents of rural areas enjoy more civil liberties than those in urban areas.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is access to basic public services, such as order and security, primary education, clean water, and healthcare, distributed equally across urban and rural areas?
CLARIFICATION: Urban areas are defined as an area that meets the following conditions: population density exceeds a threshold of 150 persons per square kilometer, there is access to

a sizeable settlement of 50,000 people or more within some reasonable travel time, for example 60 minutes by road. (World Development Report, 2009: 54). This question asks if geographic group is an important cleavage in society for the distribution of public services. Thus, if there are inequalities in access to public services, but these are not mainly due to differentiation between urban and rural areas, the code should be "4" (equal). The situation could of course vary by type of public service, such that a geographic group is denied access to some basic public services but not others. Please base your response on whether access to most of the aforementioned services are distributed equally or unequally.
RESPONSES:
0: Extreme. Because they live in rural areas, 75 percent (percent) or more of the population lack access to basic public services of good quality.
1: Unequal. Because they live in rural areas, 25 percent (percent) or more of the population lack access to basic public services of good quality.
2: Somewhat Equal. Because they live in rural areas, 10 to 25 percent (percent) of the population lack access to basic public services of good quality.
3: Relatively Equal. Because they live in rural areas, only 5 to 10 percent (percent) of the population lack access to basic public services of good quality.
4: Equal. Because they live in rural areas, less than 5 percent (percent) of the population lack access to basic public services of good quality.
5: Rural-Bias: Because they live in urban areas, 25percent or more of the population lack access to basic public services of good quality.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are state jobs equally open to qualified individuals regardless of their association with a political group?
CLARIFICATION: A political group is defined as those who are affiliated with a particular political party or candidate, or a group of parties/candidates.
RESPONSES:
0: Extreme. Because of their political group affiliation, 75 percent (percent) or more of the population, even if qualified, lack access to state jobs.
1: Unequal. Because of their political group affiliation, 25 percent (percent) or more of the population, even if qualified, lack access to state jobs.
2: Somewhat Equal. Because of their political group affiliation, 10 to 25 percent (percent) of the population, even if qualified, lack access to state jobs.
3: Relatively Equal. Because of their political group affiliation, 5 to 10 percent (percent) of the population, even if qualified, lack access to state jobs.
4: Equal. Because of their political group affiliation, less than 5 percent (percent) of the population, even if qualified, lack access to state jobs.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are state business opportunities equally available to qualified individuals or firms regardless of an individual's association with a political group?
CLARIFICATION: State business opportunities refer to the ability to compete for or receive a public procurement contract, to partner with the government in public-private partnerships, etc. A political group is defined as those who are affiliated with a particular political party or candidate, or a group of parties/candidates that can be distinguished from others in terms of access to power. Responses should not reflect which party controls the legislature and executive.
RESPONSES:
0: Extreme. Because of their political group affiliation 75 percent (percent) or more of the population, even if qualified, lack access to state business opportunities.
1: Unequal. Because of their political group affiliation 25 percent (percent) or more of the population, even if qualified, lack access to state business opportunities.
2: Somewhat Equal. Because of their political group affiliation 10 to 25 percent (percent) of the population, even if qualified, lack access to state business opportunities.
3: Relatively Equal. Because of their political group affiliation 5 to 10 percent (percent) of the population, even if qualified, lack access to state business opportunities.
4: Equal. Because of their political group affiliation less than 5 percent (percent) of the population, even if qualified, lack equal access to state business opportunities.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Are basic public services, such as order and security, primary education, clean water, and healthcare, distributed equally across social groups?
CLARIFICATION: This question asks if social group is an important cleavage in society for the distribution of public services. Thus, if there are inequalities in access to public services, but these are not mainly due to differentiation between particular social groups, the code should be "4" (equal). The situation could of course vary by type of public service, such that a social group is denied access to some basic public services but not others. Please base your response on whether access to most of the aforementioned services are distributed equally or unequally.
RESPONSES:
0: Extreme. Because of their social group, 75 percent (percent) or more of the population lack access to basic public services of good quality.
1: Unequal. Because of their social group, 25 percent (percent) or more of the population lack access to basic public services of good quality.
2: Somewhat Equal. Because of their social group, 10 to 25 percent (percent) of the population lack access to basic public services of good quality.
3: Relatively Equal. Because of their social group, only 5 to 10 percent (percent) of the population lack access to basic public services of good quality.
4: Equal. Because of their social group, less than 5 percent (percent) of the population lack access to basic public services of good quality.
SCALE: Ordinal, converted to interval by the measurement model.

2.3.17 V-Dem Indicators - Legitimation

Instructions to the coders (as shown in the surveys)

Legitimation strategies:

Governments make legitimacy claims–provide justifications for the form of rule under which they govern. In the following section we are interested in the nature of the legitimacy claims made by the sitting government. Please note that the government's claims to legitimacy - their legitimation strategies - are the object of inquiry here. We are not asking you to assess how ordinary people judge the legitimacy of their rulers. Do not assume that governments make legitimacy claims on only one basis. We are interested in multi-track and hybrid legitimation strategies. The regime is understood

as a set of formal and/or informal rules that govern the choice of political leaders and their exercise of power. The government is understood as the chief executive along with the cabinet, ministries, and top civil servants.

QUESTION: To what extent does the current government refer to the legal norms and regulations in order to justify the regime in place?
CLARIFICATION: This question pertains to legal norms and regulations as laid out for instance in the constitution regarding access to power (e.g. elections) as well as exercise of power (e.g. rule of law). Electoral regimes may score high on this question as well as non-electoral regimes that emphasize their rule-boundedness.
RESPONSES:
0: Not at all.
1: To a small extent.
2: To some extent but it is not the most important component.

3: To a large extent but not exclusively.
4: Almost exclusively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

2.3.18 V-Dem Indicators - Civic and Academic Space

Instructions to the coders (as shown in the surveys)

Civic and Academic Space:

In this survey, we ask you to assess several issues concerning the space for and state of civil society and academia. First, we ask about some general issues such as polarization and peaceful assembly. Then, we probe into mobilization for mass events and associations. Finally, we ask you to consider questions related to academia.

2.3.18.1 Political polarization (v2cacamps)

Long tag: vdem_cy_v2cacamps

Original tag: v2cacamps

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: Is society polarized into antagonistic, political camps?
CLARIFICATION: Here we refer to the extent to which political differences affect social relationships beyond political discussions. Societies are highly polarized if supporters of opposing political camps are reluctant to engage in friendly interactions, for example, in family functions, civic associations, their free time activities and workplaces
RESPONSES:
0: Not at all. Supporters of opposing political camps generally interact in a friendly manner.
1: Mainly not. Supporters of opposing political camps are more likely to interact in a friendly than a hostile manner.
2: Somewhat. Supporters of opposing political camps are equally likely to interact in a friendly or hostile manner.
3: Yes, to noticeable extent. Supporters of opposing political camps are more likely to interact in a hostile than friendly manner.
4: Yes, to a large extent. Supporters of opposing political camps generally interact in a hostile manner.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 10-16.

PROJECT MANAGER(S): Katrin Kinzelbach
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How often have non-state actors used political violence against persons this year?
CLARIFICATION: We understand political violence as the use of physical force to achieve political objectives by non-state actors. The restriction to political objectives excludes profit-driven crime-related violence, for instance. By non-state actors we refer to individuals or entities that are not formally part of the state. Thus, politically oriented militias and youth groups count as non-state actors even though they might potentially be informally affiliated with the ruling party or the state. Political violence against persons excludes psychological and symbolic violence (e.g. destruction of objects).
RESPONSES:
0: Not at all. Non-state actors did not use political violence.
1: Rare. Non-state actors rarely used political violence.
2: Occasionally. Non-state actors occasionally used political violence.
3: Frequently. Non-state actors frequently used political violence.
4: Often. Non-state actors often used political violence.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 10-16.

PROJECT MANAGER(S): Katrin Kinzelbach
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do state authorities respect and protect the right of peaceful assembly?
CLARIFICATION: This question focuses on the ability to assemble publically in practice. An assembly is "an intentional and temporary presence of a number of individuals in a public place, for a common expressive purpose" (ODIHR and Venice Commission of the Council of Europe 2010). Authorities may limit the right to assembly only if limitations are necessary in the interests of national security or public safety, public order, the protection of public health or morals, or the protection of the rights and freedoms of others, and are lawful, necessary, and proportionate to the aim pursued. Such reasonable and legal restrictions should not be considered when answering. However, if there is evidence that restrictions are used as a pretext for political reasons, this evidence should be considered.
RESPONSES:
0: Never. State authorities do not allow peaceful assemblies and are willing to use lethal force to prevent them.
1: Rarely. State authorities rarely allow peaceful assemblies, but generally avoid using lethal force to prevent them.
2: Sometimes. State authorities sometimes allow peaceful assemblies, but often arbitrarily deny citizens the right to assemble peacefully.
3: Mostly. State authorities generally allow peaceful assemblies, but in rare cases arbitrarily deny citizens the right to assemble peacefully.
4: Almost always. State authorities almost always allow and actively protect peaceful assemblies except in rare cases of lawful, necessary, and proportionate limitations.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 10-16.

QUESTION: Was a national state of emergency in place at any point this year?
CLARIFICATION: A state of emergency is a formal legal act that enables state actors and institutions to change their roles during times of international or domestic crisis. Our definition of state of emergency includes the application of martial law. If there was more than one state of emergency, code the one that was in place for the longer time. Select one option.
RESPONSES:
0: The legal framework does not allow for a declaration of a national state of emergency. (0=No, 1=Yes) [v2casoe_0]
1: There was no state of emergency in place at any point this year, even though provisions for a declaration of a national state of emergency exist. (0=No, 1=Yes) [v2casoe_1]
2: A national state of emergency was in place due to a natural disaster. (0=No, 1=Yes) [v2casoe_2]
3: A national state of emergency was in place due to a terrorist attack. (0=No, 1=Yes) [v2casoe_3]
4: A national state of emergency was in place due to an armed conflict/war, domestically or internationally. (0=No, 1=Yes) [v2casoe_4]
5: A national state of emergency was in place due to mass protest/popular uprising. (0=No, 1=Yes) [v2casoe_5]
6: A national state of emergency was in place for reasons other than those listed above. (0=No, 1=Yes) [v2casoe_6]
SCALE: Mean-aggregated scores of dichotomized variable.
DATA RELEASE: 10-16.
CROSS-CODER AGGREGATION: Mean.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In this year, how frequent and large have events of mass mobilization for pro-autocratic aims been?
CLARIFICATION: Events are pro-autocratic if they are organized explicitly in support of non-democratic rulers and forms of government such as a one-party state, monarchy, theocracy or military dictatorships. Events are also pro-autocratic if they are organized in support of leaders that question basic principles of democracy, or are generally aiming to undermine democratic ideas and institutions such as the rule of law, free and fair elections, or media freedom. This question concerns the mobilization of citizens for mass events such as demonstrations, strikes, sit-ins. These events are typically organized by non-state actors, but the question also concerns state-orchestrated rallies (e.g. to show support of an autocratic government).
RESPONSES:
0: There have been virtually no events.
1: There have been several small-scale events.
2: There have been many small-scale events.
3: There have been several large-scale and small-scale events.
4: There have been many large-scale and small-scale events.
SCALE: Ordinal, converted to interval by the measurement model.

PROJECT MANAGER(S): Sebastian Hellmeier
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What share of the population is regularly active in state-administered mass associations, such as women, worker or youth leagues?
CLARIFICATION: State-administered mass associations are civilian organizations created and led by the government or the ruling party. Large shares of specific societal groups are voluntary or compulsory members of these associations. Examples include youth leagues such as the Hitlerjugend in Nazi Germany and the pioneers in the Soviet Union, women leagues such as the Women's Federation in China or the Federacion de Mujeres Cubanas and official trade unions in the Soviet Union. Such organizations are formally or informally affiliated with the state and/or with the ruling party. We consider an individual as active if they attend a meeting, activity or event at least twice a year.
RESPONSES:
0: Virtually no one.
1: A small share of the population (less than 5percent).
2: A moderate share of the population (about 5 to 15 percent).
3: A large share of the population (about 16 percent to 25percent).
4: A very large share of the population (about 26percent or more).
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 10-16.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent are scholars free to develop and pursue their own research and teaching agendas without interference?
CLARIFICATION: Examples of interference include research agendas or teaching curricula being drafted, restricted, or fully censored by a non-academic actor; scholars being externally induced, through possible reprisals, to self-censor; or the university administration abusing its position of power to impose research or teaching agendas on individual academics. It also includes public pressure on academics - offline and online. We do not consider as interference restrictions that are due to research priorities, as well as ethical and quality standards, freely

defined by the scholarly community as well as the development of standardized curricula by academics that aim to structure and enhance teaching.
RESPONSES:
0: Completely restricted. When determining their research agenda or teaching curricula, scholars are, across all disciplines, consistently subject to interference or incentivized to self-censor.
1: Severely restricted. When determining their research agenda or teaching curricula, scholars are, in some disciplines, consistently subject to interference or incentivized to self-censor.
2: Moderately restricted. When determining their research agenda or teaching curricula, scholars are occasionally subject to interference or incentivized to self-censor.
3: Mostly free. When determining their research agenda or teaching curricula, scholars are rarely subject to interference or incentivized to self-censor.
4: Fully free. When determining their research agenda or teaching curricula, scholars are not subject to interference or incentivized to self-censor.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: To what extent are scholars free to exchange and communicate research ideas and findings?
CLARIFICATION: Free academic exchange includes uncensored access to research material, unhindered participation in national or international academic conferences, and the uncensored publication of academic material. Free dissemination refers to the unrestricted possibility for scholars to share and explain research findings in their field of expertise to non-academic audiences through media engagement or public lectures.
RESPONSES:
0: Completely restricted. Academic exchange and dissemination is, across all disciplines,

consistently subject to censorship, self-censorship or other restrictions.
1: Severely restricted. Academic exchange and dissemination is, in some disciplines, consistently subject to censorship, self-censorship or other restrictions.

QUESTION: To what extent do universities exercise institutional autonomy in practice?
CLARIFICATION: Institutional autonomy "means the independence of institutions of higher education from the State and all other forces of society, to make decisions regarding its internal government, finance, administration, and to establish its policies of education, research, extension work and other related activities" (Lima Declaration). Note that institutional autonomy does not preclude universities from accepting state or third party funding, but does require that they remain in charge of all types of decisions listed above. Institutional autonomy does also not preclude a public oversight role by the state over universities' spending of public funds.
RESPONSES:
0: No autonomy at all. Universities do not exercise any degree of institutional autonomy; non-academic actors control decision-making.
1: Minimal autonomy. Universities exercise only very limited institutional autonomy; non-academic actors interfere extensively with decision-making.

2: Moderate autonomy. Universities exercise some institutional autonomy; non-academic actors interfere moderately with decision-making.
3: Substantial autonomy. Universities exercise institutional autonomy to a large extent; non-academic actors have only rare and minimal influence on decision-making.
4: Complete autonomy. Universities exercise complete institutional autonomy from non-academic actors.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: To what extent are campuses free from politically motivated surveillance or security infringements?
CLARIFICATION: "Campus" refers to all university buildings as well as digital research and teaching platforms. Campus integrity means the preservation of an open learning and research environment marked by an absence of an externally induced climate of insecurity or intimidation on campus. Examples of infringements of campus integrity are politically motivated on-campus or digital surveillance, presence by intelligence or security forces, presence of student militias, or violent attacks by third parties, if specifically targeting universities to repress academic life on campus. Note that we are only interested in politically motivated infringements and targeted attacks on campus integrity, not in non-political security concerns or proportionate security measures taken on campus to address these.
RESPONSES:
0: Completely restricted. Campus integrity is fundamentally undermined by extensive surveillance and severe intimidation, including violence or closures.
1: Severely restricted. Campus integrity is to a large extent undermined by surveillance and intimidation, at times including violence or closures.
2: Moderately restricted. Campus integrity is challenged by some significant cases of

surveillance or intimidation.
3: Mostly free. Campus integrity is to a large extent respected, with only minor cases of surveillance or intimidation.
4: Fully free. Campus integrity is comprehensively respected; there are no cases of surveillance or intimidation.

QUESTION: To what extent do scholars and university students publicly criticize government policies?
CLARIFICATION: This question is only about the extent scholars and students actually criticize government policies – irrespective of how free they are to do so and whether they are met with repression or not. We ask you simply to consider to what extent scholars and students are noticeable as government critics in the public discourse.

Public criticism of government policies can be conveyed for example through the publication of op-eds or social media posts on current affairs, the signing of open letters or petitions, the taking part in or organization of public protests, or the holding of critical lectures to students or the public.
RESPONSES:
0: Not at all. Scholars and university students do not publicly express criticism of government policies.
1: To a small extent. Scholars and university students publicly express minor criticism of government policies.
2: To a moderate extent. Scholars and university students publicly express moderate criticism of government policies.

3: To a large extent. Scholars and university students publicly express substantive criticism of government policies.
4: To a major extent. Scholars and university students publicly express fundamental criticism of government policies.

QUESTION: Is the state party to the International Covenant on Economic, Social and Cultural Rights (ICESCR) without reservations to article 15 (right to science)?
CLARIFICATION: This indicator captures the country's international legal commitment to academic freedom. It indicates whether the country is party to the International Covenant on Economic, Social and Cultural Rights without having made explicit reservations to its article 15 (right to science), which stipulates, among other things, that states parties "undertake to respect the freedom indispensable for scientific research".
RESPONSES:
0: State not a party to ICESCR, or made reservations to article 15.
1: State is party to ICESCR without reservations to article 15, but treaty not yet in force.
2: ICESCR in force and signed without reservations to article 15.
3: ICESCR in force and ratified without reservations to article 15.
SCALE: Ordinal.
SOURCE(S): United Nations (2025).

2.3.19 Historical V-Dem - Elections

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem Elections*- section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.3.19.1 Minimum candidate age lower chamber (v3canagelc)

QUESTION: Who prints ballot papers?
CLARIFICATION: Leave blank if all or nearly all voting is verbal (viva voce).
RESPONSES:
0: Political parties or candidates print all (or nearly all) the ballot papers.
1: Both the state and parties or candidates print the ballot papers.
2: The state prints all (or nearly all) ballot papers.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v3elbalpap is 0
CITATION: Pemstein et al. QUESTION: Is voting compulsory (for those eligible to vote) in national elections?

RESPONSES:
0: No.
1: Yes. But there are no sanctions or sanctions are not enforced.
2: Yes. Sanctions exist and are enforced, but they impose minimal costs upon the offending voter.
3: Yes. Sanctions exist, they are enforced, and they impose considerable costs upon the offending voter.
SCALE: Ordinal, converted to interval by the measurement model.
