ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is there a large discrepancy in the vote/seat ratio across electoral districts for the lower (or unicameral) chamber?
CLARIFICATION: quot;Malapportionmentquot; characterizes a situation in which voters in some districts have more power by virtue of a more favorable vote/seat ratio. For example, if seats have not been reapportioned in a long time rural areas may be over-represented relative to urban areas simply because the latter have grown more rapidly than the former. (This question does not address inequality of votes based on class or other criteria.) Leave blank if there is no lower (or unicameral) chamber.
RESPONSES:
0: There is a high degree of malapportionment. Vote/seat ratios across districts differ by as much as 50:1.
1: There is a substantial degree of malapportionment. Vote/seat ratios across districts differ as much as 10:1.
2: There is some degree of malapportionment. Vote/seat ratios across districts differ by as much as 2:1.
3: There is modest or no malapportionment. Vote/seat ratios across districts differ by less than 2:1.
SCALE: Ordinal, converted to interval by the measurement model.

QUESTION: Is there a legal or constitutional statute, upheld in practice, stating that seats or electoral boundaries for elections to the lower (or unicameral) chamber of the legislature should be regularly reapportioned?
CLARIFICATION: Reapportionment is the process of reallocating the number of seats or the boundaries of a district in order to reflect its relative share of the population. Answering yes does not imply perfect apportionment (see later question). Leave blank if no lower (or unicameral) chamber. (This question is not about suffrage or informal restrictions to suffrage.)
RESPONSES:
0: No.
1: Yes, reapportionment is stipulated by constitution or law but not upheld in practice.
2: Yes, reapportionment is stipulated by constitution or law and upheld in practice.

PROJECT MANAGER(S): Svend-Erik Skaaning
QUESTION: Is the right to run as a candidate to the upper chamber of the national parliament restricted for any of the following reasons? Check all that apply.
CLARIFICATION: This question applies to citizens only and to legal (*de jure*) restrictions, not restrictions that may be operative in practice (*de facto*). Leave blank if there is no upper chamber. Specify in comments section if some of the criteria are jointly necessary (*e.g.*, BOTH property AND literacy) or if some of them are mutually substitutable (*e.g.*, EITHER property OR literacy).
RESPONSES:
0: Literacy [v3elrstrup_0]
1: Property [v3elrstrup_1]
2: Income [v3elrstrup_2]
3: Tax payment [v3elrstrup_3]
4: Economic dependency (*e.g.*, personal servants/debtors/single sons living with their father) [v3elrstrup_4]
5: Slave [v3elrstrup_5]
6: Ethnicity, race [v3elrstrup_6]
7: Religion [v3elrstrup_7]
8: Region [v3elrstrup_8]
9: quot;Bad moral characterquot; [v3elrstrup_9]
10: Clergy/military personnel/police/civil servants [v3elrstrup_10]
11 : Incarcerated or ex-felons [v3elrstrup_11]
12: Gender – all women excluded [v3elrstrup_12]
13: Gender – women qualified on narrower basis than men. [v3elrstrup_13]
SCALE: Nominal
ANSWER-TYPE: Multiple-selection.

PROJECT MANAGER(S): Svend-Erik Skaaning
QUESTION: Did control of the upper chamber of the legislature change as a result of this election, according to official results?
RESPONSES:
0: No. The same party/group/coalition remained in control of the majority of seats.

1: Partly. The leading position within a coalition changed. Or, a new coalition includes some old groups/parties and some new groups/parties.

2: Yes. Another party/group/coalition gained control of the majority of seats.
SCALE: Ordinal.

If there is variation across regions of a country, for each category try to estimate the modal (most common) situation. Thus, if most regions imposed restrictions based on property, choose answer #2. Leave blank if there is no upper chamber or if upper chamber is not directly elected. Specify in comments section if some of the criteria are jointly necessary (*e.g.*, BOTH property AND literacy) or if some of them are mutually substitutable (*e.g.*, EITHER property OR literacy).
RESPONSES:
0: Literacy [v3elvstruc_0]
1: Property [v3elvstruc_1]
2: Income [v3elvstruc_2]
3: Tax payment [v3elvstruc_3]
4: Economic dependency (*e.g.*, personal servants/debtors/single sons living with their father) [v3elvstruc_4]
5: Slave [v3elvstruc_5]
6: Ethnicity, race [v3elvstruc_6]
7: Religion [v3elvstruc_7]
8: Region [v3elvstruc_8]
9: quot;Bad moral characterquot; [v3elvstruc_9]
10: Clergy/military personnel/police/civil servants [v3elvstruc_10]
11 : Incarcerated or ex-felons [v3elvstruc_11]
12: Gender – all women excluded [v3elvstruc_12]
13: Gender – women qualified on narrower basis than men. [v3elvstruc_13]
SCALE: Nominal
ANSWER-TYPE: Multiple-selection.

2.3.20 Historical V-Dem - Political Parties

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Political Parties*- section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.3.20.1 Party identification (v3partyid)

Long tag: vdem_cy_v3partyid

Original tag: v3partyid

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_nr
QUESTION: Do voters identify with a political party?
CLARIFICATION: When party identification is strong, vote choice is largely determined by a voter's party affiliation (and his/her affiliation with that party) rather than attachments to particular candidates, non-partisan issue-positions, or material incentives (*e.g.*, vote-buying). Likewise, when party identification is strong, voters retain loyalty to a single party rather than switching from one party to another across elections or across offices in the same election (ticket-splitting). In this fashion we can somewhat crudely distinguish between partisans and non-partisans. Note that this question refers only to voters, not to members of the population who do not vote (because they are disenfranchised, choose not to vote, or are discouraged from voting). Leave this question blank if there are no national elections.

RESPONSES:
0: There are national elections, but there are no political parties.
1: Only one party is allowed to participate in national elections.
2: More than one party participates, and nearly all voters are non-partisans.
3: More than one party participates, and most voters are non-partisans.
4: More than one party participates, and voters are equally divided between partisans and non-partisans.
5: More than one party participates, and most voters are partisans.
6: More than one party participates, and nearly all voters are partisans.
SCALE: Nominal, but categories 2—6 constitute ordinal.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Mean.

(2026)

Description:
VARIABLE TYPE: C
PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is the lower chamber of the legislature required to approve the budget?
CLARIFICATION: The budget refers to major revenue (appropriations) and expenditure (spending) bills. Typically, these are passed annually or bi-annually. Approval is understood to mean a formal vote on the floor of the chamber in which at least 50percent of those voting approve the measure.
RESPONSES:
0: No. Includes situations in which (a) there are no formal budget bills, or (b) the executive

entirely by-passes the lower house or ignores its actions.
1: Yes. Includes situations in which (a) the executive exercises selective (quot;line-itemquot;) vetoes, and (b) there is a prolonged period in which no budget is passed and the executive is unable to raise and spend money, or must operate under the terms of the previous budget.
SCALE: Dichotomous
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CLEANING: Set to missing when v3lgbicam is 0

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): John Gerring
QUESTION: Is there a national-level quota for any social groups in the lower (or unicameral) chamber of the legislature?
CLARIFICATION: These quotas are sometimes informally known as quot;minority quotas.quot; Do not record gender quotas here (as gender is not part of what we mean by a social group). Also, do not include special rules that benefit parties defined by social group but do not guarantee seats for these groups. For example, do not count a rule exempting parties from threshold requirements. Code quot;yesquot; only if the groups covered by the quota have full voting rights in the legislature.
RESPONSES:

0: No national level quota for any social group.
1: Yes, there are reserved seats for at least one social group.
SCALE: Dichotomous
SOURCE(S): Constitute Project (2026); Library of Congress (2025).
DATA RELEASE: 8-16.

YEARS: 1789-1920

2.3.22 Historical V-Dem - The Judiciary

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - The Judiciary-* section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.3.22.1 High court existence (v3juhcourt)

Long tag: vdem_cy_v3juhcourt

Original tag: v3juhcourt

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
PROJECT MANAGER(S): Jan Teorell
QUESTION: Is there a high court?
CLARIFICATION: Note that in some cases we consider an institution to be the Highest Court in a given country, even though we acknowledge that its jurisdiction covers most though not all the territory of the country. Any pre-coded years contain an orange triangle.

This means that the rating and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating.
RESPONSES:
0: No.
1: Yes.
ORDERING: If answer is quot;0quot;, skip to v2juncind.
SOURCE(S): Various country-specific sources.
DATA RELEASE: 8-16.
COUNTRY-YEAR AGGREGATION: Last

(2026)

Description:
VARIABLE TYPE: C

PROJECT MANAGER(S): John Gerring
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does labor enjoy the right to organize freely and bargain collectively?
CLARIFICATION: Refers to actual practice not formal (*de jure*) rights. If practices vary across the country, or across sectors, please consider the overall situation of labor.
RESPONSES:
0: Independent labor unions (free from state or ruling party control) are not allowed.
1: Independent labor unions are allowed, at least in some sectors of the economy or some sections of the country. However, they are subject to harassment by the police, paramilitary groups, business associations, or other groups. Harassment refers to systematic beatings, imprisonment, outlawing of specific unions, and other actions that seriously impinge upon the ability of unions to organize and bargain collectively.
2: Independent labor unions are allowed and they do not face violent repression but the legal climate is not friendly (*e.g.*, quot;closed shopquot; rules are widespread), making it difficult to organize and bargain collectively.
3: Independent labor unions are allowed and may organize freely in all sectors of the economy.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell, Thomas Brambor, Agustín Goenaga, Johannes Lindvall
QUESTION: Was there a national census in this year?
CLARIFICATION: In order to count as a quot;censusquot;, the following four criteria needs to be satisfied:
1. Universality: the census attempted to cover the entire population and not just a sample.
2. Individual Enumeration: the census enumerates each individual separately and records his or her characteristics separately. If the census only produces aggregate or summarised information, it is only a population count and should not count as a census. For example, A population count of a household with 4 people would produce the following results:

- Age—Adults: 2; Children: 2
- Sex—Males: 2; Females: 2
- Instead, an individual enumeration would look like this:
  - Head of household-male-adult
  - Spouse-female-adult
  - Son-male-child
  - Daughter-female-child
  - The key difference is that only in the individual enumeration the data on various characteristics can be cross-tabulated.
- 3. Defined Territory: The territory covered, along with any changes in its area is clearly stated.
- 4. Simultaneity and Specified Time: Each person is enumerated as nearly as possible to the same well-defined point in time, and the collected data should refer to a well-defined reference period.

Code quot;1quot; if a national census was completed in this year – but not if it was aborted or was not national in scope.

QUESTION: To what extent are day-to-day decisions made by state administrators subject to intervention from political elites?
CLARIFICATION: By political elites we mean members of the executive, members of the legislature and political elites at local and regional levels. Note that the focus on the day-to-day decisions of the state administration implies interference in specific operational decisions in a meticulous manner. Decisions taken by rulers about the general direction of the state administration should not be considered. Note that the question refers to the *de facto* situation.
RESPONSES:
0: Constantly. Day-to-day decisions taken by state administrators are constantly subject to intervention.
1: Often. Day-to-day decisions in the state administration are often subject to intervention.
2: About half. Approximately half of the day-to-day decisions in the state administration are subject to intervention.
3: Occasionally. Day-to-day decisions in the state administration are occasionally subject to intervention.
4: Never, or hardly ever. Day-to-day decisions in the state administration are never or hardly ever subject to intervention.
SCALE: Ordinal.

QUESTION: Can the state oversee and regulate the economy?
CLARIFICATION: This refers to the state's ability to keep track of economic activities in its territory and potentially influence them by shaping the incentives and constraints that private firms face to do business; *e.g.*, through licensing, granting exploitation rights, taxing, imposing market barriers, building infrastructure, offering subsidies, adjudicating conflicts, or enforcing regulations.
RESPONSES:

0: Most economic activities happen outside the reach of the state
1: The state steers some economic activities
2: The state steers a substantial share – but less than half – of the national economy
3: The state steers about half or more than half, of the national economy
4: The state steers all or almost all economic activities
SCALE: Ordinal.

YEARS: 1789-2015

2.3.25 Historical V-Dem - Political Equality

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

The *Historical V-Dem - Political Equality-* section includes new A, A* and C type indicators that have (at least so far) only been coded for Historical V-Dem, with the modal time series spanning the years 1789-1920 (although time series coverage is different for some variables). This section also includes v3elcomvot, which is coded as a type C variable in Historical V-Dem, while v2elcomvot is coded as a type A variable in Contemporary V-Dem.

For instructions given to the coders (as shown in the surveys), please see introductions to the corresponding theme in the corresponding V-Dem Indicators section.

2.3.25.1 Equal vote legislature/lower chamber (v3equavolc)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Svend-Erik Skaaning
ADDITIONAL VERSIONS: *_nr
QUESTION: Are ballots in elections for the lower (or unicameral) chamber of the national legislature counted differently for different social groups? (Check all that apply.)
CLARIFICATION: Leave blank if there is no lower (or unicameral) chamber.
RESPONSES:
0: No. All ballots are counted equally, regardless of social group. [v3equavolc_0]
1: Yes. There is a curial/estate voting system where voters are separated into categories by, for example, class criteria and assigned a disproportionate numbers of deputies. [v3equavolc_1]
2: Yes. There is census/plural vote for particular groups (*e.g.*, votes cast by individuals with higher incomes or tax contributions are given more weight) [v3equavolc_2]
3: Yes. Some voters are allowed to vote in several constituencies. [v3equavolc_3]
SCALE: Nominal
DATA RELEASE: 8-16.
CROSS-CODER AGGREGATION: Mean.

2.3.26 Historical V-Dem - Historical V-Dem Modified

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

V-Dem indicators that are different to their contemporary counterparts, for the purpose of gathering additional relevant information for the historical period in Historical V-Dem. These variables are also merged into their v2 equivalents.

First, In contrast to contemporary V-Dem, Historical V-Dem codes upper chamber elections and thus also includes eltype category 2. Those observations are treated as missing in the historical-contemporary merged version of v2eltype. Due to election specific variables being cleaned by v2eltype, these do not include upper chamber elections either. In order to include historical data on upper chamber elections we thus also provide v3eltype and v3 election specific variables that are cleaned by v3eltype.

Second, Historical V-Dem codes additional chambers compared to contemporary V-Dem. When merging v2lgbicam and v3lgbicam the categories get recoded as follows:

- Categories 3 (tricameral) and 4 (quadricameral) become category 2 for the merged v2lgbicam.
- Category 9 (Other types of legislature) becomes category 0 for the merged v2lgbicam.

In order to include historical data on additional chambers, we thus also provide v3lgbicam and v3 chamber specific variables that are cleaned by v3lgbicam.

2.3.26.1 Lower chamber electoral system (v3elloelsy)

Long tag: vdem_cy_v3elloelsy

Original tag: v3elloelsy

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Inter-Parliamentary Union (IPU) (2025), International Foundations for Electoral System (IFES) (2026)

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: What was the electoral system used in this election for the lower or unicameral chamber of the legislature?
CLARIFICATION: Further information on the following electoral system types can be found in Reynolds/Reilly, The New International IDEA Handbook (2005), chapter two and Annex B (Glossary of Terms) – downloadable, free of charge, at www.idea.int/publications/esd/.
RESPONSES:
0: First-past-the-post (FPP, aka plurality) in single-member constituencies. The candidate with the most votes wins the seat.

1: Two-round system in single-member constituencies. Like FPP except that a threshold — usually 50percent + 1 — is required to avoid a runoff between the two top vote-getters.

2: Alternative vote in single-member districts. Voters rank-order their preferences for the candidates who compete for a single seat. If any candidate receives an absolute majority of first preferences, s/he is elected. If not, then the least successful candidates (based on first-preferences) are eliminated and their votes reallocated to the second-preferences. This process is repeated until a candidate reaches 50percent +1 of the votes.

3: Block vote in multi-member districts. Electors have as many votes as there are seats within that district and can rank-order them (within or across parties) as they please.

4: Party block vote in multi-member districts. Voters cast a vote for a single party (but not for individual candidates within the party's list). The party with the most votes (*i.e.*, a plurality) wins all the seats in that district.

5: Parallel (SMD/PR). Some seats are in single-member districts (allocated by FPP or two-round electoral rules) and other seats are in multimember districts (allocated by some form of PR). These districts are overlapping, meaning that each elector votes twice: once in the single-member district race and once in the multi-member district race. Results are independent.

6: Mixed-member proportional (SMD with PR compensatory seats). Some seats are in single-member districts (allocated by FPP or two-round electoral rules) and other seats are in multimember districts (allocated by some form of PR). These districts are overlapping, meaning that each elector votes twice: once in the single-member district race and once in the multi-member district race. Results are not independent. Specifically, the multimember seats are used to rectify disproportionalities achieved in the single-member district election —

by adding seats, as necessary. This means that the representation of parties in the legislature is determined entirely by the PR ballot. It also means that the result of an MMP election is similar to the result of a PR election: parties achieve representation according to their nationwide vote share (on the PR ballot)

7: List PR with small multi-member districts (mean district size lt; 7). Each party presents a list of candidates for election within a district. Electors vote for a party, and parties receive seats in (rough) proportion to their overall share of the vote. Mean district size is less than seven.

8: List PR with large multi-member districts (mean district size gt; 7). Each party presents a list of candidates for election within a district. Electors vote for a party, and parties receive seats in (rough) proportion to their overall share of the vote. Mean district size is greater than seven.

9: Single-transferable vote (STV) in multi-member districts. Electors rank-order candidates nominated for a district. Candidates that surpass a specified quota of first-preference votes are elected. The remaining seats are chosen by reallocating the votes of the least successful candidates to elector's second- (or third-) preferences until the specified quota is reached. This process is repeated until all seats for that district are filled.
10: Single non-transferable vote (SNTV) in multi-member districts. Each elector chooses a single candidate. The candidates with the most votes (a plurality) win. (The number of winners is of course determined by the size of the district.)

11: Limited vote in multi-member districts.
Electors have more than one vote but fewer votes than the number of seats in the district. The candidates with the most votes (a plurality) win. (The number of winners is of course determined by the size of the district.)

12: Borda Count in single- or multi-member districts. Electors use numbers to mark preferences among candidates and each preference is assigned a value. For example, in a ten-candidate field a first preference is worth one, a second preference is worth .9, and so forth. These are summed and the candidate(s) with the highest total(s) is/are elected.

Description:

VARIABLE TYPE: A
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: Did control of the lower (or unicameral) chamber of the legislature change as a result of this election, according to official results?
RESPONSES:
0: No. The majority party or ruling coalition includes the same or substantially the same parties, even if some minor parties (holding less than 10 percent of the seats in the legislature) left or joined the coalition, or because the elections do not affect the lower chamber.
1: Half. A minority party or coalition who was not in control of the chamber before the elections assumed the leading position in the legislature but is dependent on other parties for support. Or, a post-election ruling coalition includes some old parties and some new parties and the new parties represent more than 10 percent of the seats in the legislature.
2: Yes. The incumbent party or coalition lost its majority or plurality-dominant position in the legislature and a different party or coalition assumes the majority position.
SCALE: Ordinal.
SOURCE(S): **?**; **?**; **?**; **?**; **?**; Library of Congress (2025), various country-specific sources, constitutions, websites of National Parliament.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: What type of election was held on this date?
CLARIFICATION: The date and type of each election has been pre-coded. Any pre-coded years contain an orange triangle. This means that the score or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same elections.
If the election unfolds across more than one day, the date for the first day is entered. If the precise date was unavailable, the first of the month is entered. If the month is unknown, January 1 is entered. Multiple-round elections (*e.g.*, two-round elections) are counted separately, *i.e.*, as separate elections. More than one election in a single year is

accommodated by listing each election with a separate calendar date. When elections to more than one office occur on the same day these are listed separately (though naturally with the same date).
RESPONSES:
0: Legislative; lower, sole, or both chambers, first or only round. [v3eltype_0]
1: Legislative, lower, sole, or both chambers, second round. [v3eltype_1]
2: Legislative, upper chamber only, first or only round. [v3eltype_2]
3: Legislative, upper chamber only, second round. [v3eltype_3]
4: Constituent Assembly, first or only round. [v3eltype_4]
5: Constituent Assembly, second round. [v3eltype_5]
6: Presidential, first or only round. [v3eltype_6]
7: Presidential, second round. [v3eltype_7]
8: Metropolitan or supranational legislative, first or only round. [v3eltype_8]
9: Metropolitan or supranational legislative, second round. [v3eltype_9]
ANSWER-TYPE: Multiple-selection

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: In this presidential election, what percentage (percent) of the vote was received by the winning candidate in the first round?
CLARIFICATION: Leave this question blank if election was nonpartisan, *i.e.*, no parties (not even pro-government parties) were allowed.
Record only direct presidential elections. Cases where the presidents are elected indirectly by the legislature (*i.e.* Germany) are not being coded since there is no popular vote share. However, in countries where electoral college is present (*i.e.* U.S.), the percentage of popular vote should be recorded if available.
SCALE: Interval

ANSWER-TYPE: Percent

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: In this presidential election, what percentage (percent) of the vote was received by the second most successful candidate in the first round?
CLARIFICATION: Leave this question blank if election was nonpartisan, *i.e.*, no parties (not even pro-government parties) were allowed.
Record only direct presidential elections. Cases where the presidents are elected indirectly by the legislature (*i.e.* Germany) are not being coded since there is no popular vote share. However, in countries where electoral college is present (*i.e.* U.S.), the percentage of popular vote should be recorded if available.
SCALE: Interval
ANSWER-TYPE: Percent
SOURCE(S): **?**; **?**; **?**; **?**; **?**, websites of national parliaments, websites of national bureau of statistics, various country-specific sources.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: How many chambers does the legislature contain?
CLARIFICATION: The answer to this question has been pre-coded for as many years as possible. Any pre-coded years contain an orange triangle. This means that the code and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating.
RESPONSES:
0: No legislature exists (or the legislature is shut down).
1: Unicameral
2: Bicameral
3: Tricameral
4: Quadricameral
9: Other type of legislature
ORDERING: If all years are (0), skip to The Judiciary (v2juintro). If (1) is chosen, skip to v2lgintro2.
SCALE: Ordinal.
SOURCE(S): **?**; **?**; **?**; **?**; **?**; Elkins & Ginsburg (2025); Library of Congress (2025), various country-specific sources, including books, articles, constitutions and online sources, websites of national parliaments.

QUESTION: Does the lower (or unicameral) chamber of the legislature have a functioning committee system?
RESPONSES:
0: No, there are no committees.
1: Yes, but there are only special (not permanent) committees.
2: Yes, there are permanent committees, but they are not very significant in affecting the course of policy.
3: Yes, there are permanent committees that have strong influence on the course of policymaking.

QUESTION: Do members of the legislature abuse their position for financial gain?
CLARIFICATION: This includes any of the following: (a) accepting bribes, (b) helping to obtain government contracts for firms that the legislator (or his/her family/friends/political supporters) own, (c) doing favors for firms in exchange for the opportunity of employment after leaving the legislature, (d) stealing money from the state or from campaign donations for personal use.
Please make your best estimate, based upon what is known or suspected to be true.
RESPONSES:
0: Never, or hardly ever.
1: Very occasionally. There may be a few legislators who engage in these activities but the vast majority do not.
2: Sometimes. Some legislators probably engage in these activities.
3: Often. Many legislators probably engage in these activities.
4: Commonly. Most legislators probably engage in these activities.

YEARS: 1789-2010

2.3.27 Historical V-Dem - Overlap Period Discrepancies

This part of the codebook contains variables pertaining to the Historical V-Dem data collection. A maximum of 91 countries are included in the sample (see the country table), but some variables (in particular C type variables) cover fewer countries, as coding is still ongoing. For more information on the Historical V-Dem project, please refer to the Organization and Management document (`https://www.v-dem.net/static/website/img/refs/orgmanv111.pdf`) or the Historical V-Dem page: `https://www.v-dem.net/hdata.html`. The vast majority of questions coded by Historical V-Dem are V-Dem indicators previously coded back to 1900, and these indicators are found in other sections of the codebook with merged time series extending all the way from 1789 to the present.

This section includes A and A* variables where there is a discrepancy in the coding of some observations between the Historical and Contemporary V-Dem coding for the overlap period (typically 1900-1920). The v2-versions of these variables, reported elsewhere in the codebook, report the Contemporary V-Dem scores in cases of discrepancies in the overlap period.

Remaining inconsistencies in the Historical and Contemporary V-Dem coding, that are not due to substantive differences in the indicators, will be sorted out for version 10 of the dataset.

2.3.27.1 Local government elected (v3ellocelc)

Long tag: vdem_cy_v3ellocelc

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: At the local level, are government offices elected in practice?
CLARIFICATION: The information on this question has been pre-coded. Any pre-coded years contain an orange triangle. This means that the score and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating as we need all the Country Experts to answer the subsequent questions for the same local governments.
quot;Government officesquot; here refers to a local executive and a local assembly, not a judiciary and not minor bureaucrats. An executive is a single individual (or a very small group) (*e.g.*, a mayor). An assembly is a larger body of officials.
quot;Electedquot; refers to offices that are directly elected by citizens or indirectly elected by a local elected assembly. All other methods of obtaining office – including appointment by a higher level of government – are considered to be non-elected.
In classifying a position as elected one is making no judgments about the freeness/fairness of the election or the relative extent of suffrage. One is simply indicating that there is an election and that the winner of that election (however conducted) generally takes office.
RESPONSES:
0: Generally, offices at the local level are not elected.
1: Generally, the local executive is elected but not the assembly.
2: Generally, the local assembly is elected but not the executive.
3: Generally, the local executive is elected and there is no assembly.
4: Generally, the local assembly is elected and there is no executive.
5: Generally, the local executive and assembly are elected.

PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: Is there a local government?
CLARIFICATION: The information on this question has been pre-coded. Any pre-coded years contain an orange triangle. This means that the score and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating as we need all the Country Experts to answer the subsequent questions for the same local governments.
Local government refers to the level of government below the regional government. There are many names for units at this level; some common ones are counties, communes, cities, municipalities, towns, rural municipalities, and villages.
Countries with more than two subnational levels may have multiple levels that fit the definition of local government. If this is the case, please code the local level that, in practice, has the most responsibilities (*e.g.* making laws, providing primary, education, maintaining roads, policing, etc.) and resources to carry out those responsibilities.
RESPONSES:
0: No
1: Yes

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: Is there a regional government?
CLARIFICATION: The information on this question has been pre-coded. Any pre-coded years contain an orange triangle. This means that the score and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating as we need all the Country Experts to answer the subsequent questions for the same regional governments.
Regional government is typically the second-highest level of government, just below the national government. There are many names for units at this level; some common ones are regions, provinces, states, departments, and cantons.
Countries with more than two subnational levels may have multiple levels that fit the definition of regional government. If this is the case, for all questions about regional government please code the regional level that, in practice, has the most responsibilities (*e.g.* making laws, providing primary, education, maintaining roads, policing, etc.) and resources to carry out those responsibilities.
Some countries are so small that, now or in earlier time periods, they have only local government and not regional government. If this is the case, this question is coded as quot;0quot; for the appropriate time period.
RESPONSES:

0: No
1: Yes
ORDERING: If coded quot;0quot; for entire period, skip the following questions focused on regional government.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Carl Henrik Knutsen
QUESTION: At the regional level, are government offices elected in practice?
CLARIFICATION: The information on this question has been pre-coded. Any pre-coded years contain an orange triangle. This means that the score and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating as we need all the Country Experts to answer the subsequent questions for the same regional governments.
quot;Government officesquot; here refers to a regional executive and a regional assembly, not a judiciary and not minor bureaucrats. An executive is a single individual (or a very small group) (*e.g.*, a governor). An assembly is a larger body of officials, who may be divided into two chambers.
quot;Electedquot; refers to offices that are directly elected by citizens or indirectly elected by a regional elected assembly. All other methods of obtaining office – including appointment by higher or lower levels of government – are considered to be non-elected.
In classifying a position as elected one is making no judgments about the freeness/fairness of the election or the relative extent of suffrage. One is simply indicating that there is an election and that the winner of that election (however conducted) generally takes office.
RESPONSES:
0: Generally, offices at the regional level are not elected.
1: Generally, the regional executive is elected but not the assembly.
2: Generally, the regional assembly is elected but not the executive.
3: Generally, the regional executive is elected and there is no assembly.
4: Generally, the regional assembly is elected and there is no executive.
5: Generally, the regional executive and assembly are elected.

Description:

VARIABLE TYPE: A*
PROJECT MANAGER(S): Jan Teorell
QUESTION: Is the head of state (HOS) also head of government (HOG)?
CLARIFICATION: Once again, the identities of the head of government for each country have been pre-coded for as many years as possible. Any pre-coded years contain an orange

triangle. This means that either the score or text and/or specific date have already been entered, so we are asking you only to add your confidence in the pre-coded rating; we do not want you to change the rating, as we need all the Country Experts to answer the subsequent questions for the same executives.

Note that this question only pertains to whether the head of state and the head of government are the same person or body, regardless of the relative powers of the two. Thus, in a constitutional monarchy, for example, the head of state and head of government are not the same even though the head of state may lack any real political power. If multiple head of states/head of governments were appointed in any year, the question pertains to each one of them.
RESPONSES:
0: No
1: Yes
ORDERING: If HOS=HOG (answer is quot;yesquot;) for all years: skip to quot;Introduction to entire executive.quot; (v2exintro3)
SOURCE(S): **?**; Elkins & Ginsburg (2025); **?**; **?**; **?**.

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Jan Teorell
QUESTION: How did the head of state reach office?
CLARIFICATION: If several bodies were involved in the appointment process, select the one that exerted the most critical impact on the decision. However, in the next question we ask separately about whether the approval of the legislature was necessary. Response category 7 should only be selected if the head of state is directly elected, not if he or she was appointed by the legislature after an election.
RESPONSES:
0: Through the threat of or application of force, such as a coup or rebellion.
1: Appointed by a foreign power.
2: Appointed by the ruling party (in a one-party system).
3: Appointed by a royal council.
4: Through hereditary succession.
5: Appointed by the military.
6: Appointed by the legislature.
7: Directly through a popular election (regardless of the extension of the suffrage).
8: Other.
SCALE: Nominal
SOURCE(S): Various country-specific sources.
DATA RELEASE: 8-16.
COUNTRY-YEAR AGGREGATION: Maximum
DATE SPECIFIC: Coded on HOS appointment dates and December 31 (v3exnamhos).
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1789-1933

2.3.27.12 Title of HOG (H) (v3extithog)

Long tag: vdem_cy_v3extithog

Original tag: v3extithog

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Michael Coppedge
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does the government directly or indirectly attempt to censor the print or broadcast media?
CLARIFICATION: Indirect forms of censorship might include politically motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities and distribution networks, selected distribution of advertising, onerous registration requirements, prohibitive tariffs, and bribery.
We are not concerned with censorship of non-political topics such as child pornography, statements offensive to a particular religion, or defamatory speech unless this sort of censorship is used as a pretext for censoring political speech.
RESPONSES:
0: Attempts to censor are direct and routine.
1: Attempts to censor are indirect but nevertheless routine.
2: Attempts to censor are direct but limited to especially sensitive issues.
3: Attempts to censor are indirect and limited to especially sensitive issues.
4: The government rarely attempts to censor major media in any way, and when such exceptional attempts are discovered, the responsible officials are usually punished.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-15.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*)
CITATION: Pemstein et al. (2026); *V-Dem Codebook* (see suggested citation at the top of this document).

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Marcus Tannenberg, Staffan I Lindberg
QUESTION: How can the political regime overall be classified considering the competitiveness of access to power (polyarchy) as well as liberal principles?
RESPONSES:
0: Closed autocracy: No multiparty elections for the chief executive or the legislature.

1: Electoral autocracy: De-jure multiparty elections for the chief executive and the legislature, but failing to achieve that elections are free and fair, or de-facto multiparty, or a minimum level of Dahl's institutional prerequisites of polyarchy as measured by V-Dem's Electoral Democracy Index (v2x_polyarchy).

2: Electoral democracy: De-facto free and fair multiparty elections and a minimum level of Dahl's institutional prerequisites for polyarchy as measured by V- Dem's Electoral Democracy Index (v2x_polyarchy), but either access to justice, or transparent law enforcement, or liberal principles of respect for personal liberties, rule of law, and judicial as well as legislative constraints on the executive not satisfied as measured by V-Dem's Liberal Component Index (v2x_liberal).

3: Liberal democracy: De-facto free and fair multiparty elections and a minimum level of Dahl's institutional prerequisites for polyarchy as measured by V- Dem's Electoral Democracy Index (v2x_polyarchy) are guaranteed as well as access to justice, transparent law enforcement and the liberal principles of respect for personal liberties, rule of law, and judicial as well as legislative constraints on the executive satisfied as measured by V-Dem's Liberal Component Index (v2x_liberal).

SCALE: Ordinal.
SOURCE(S): v2x_elecreg v2xlg_elecreg v2xex_elecreg v2eltype v2elmulpar_osp v2elfrfair_osp v2expathhg v2expathhs v2ex_legconhos v2ex_hosw v2x_polyarchy v2x_liberal v2clacjstm_osp v2clacjstw_osp v2cltrnslw_osp v2exaphogp
DATA RELEASE: 9-16.
AGGREGATION: Electoral democracies score above 2 on the indicators for multi–party (v2elmulpar_osp) and free and fair elections (v2elfrfair_osp), as well as above 0.5 on the Electoral Democracy Index (v2x_polyarchy). Liberal democracy meets the criteria for Electoral democracy but also satisfy the liberal dimensions by a score above 0.8 on the

V–Dem Liberal Component index (v2x_liberal), as well as a score above 3 on transparent law enforcement (v2cltrnslw_osp), access to justice for men (v2clacjstm_osp) and women (v2clacjstw_osp). Electoral autocracies fail to meet one or more of the above–mentioned criteria of electoral democracies, but subject the chief executive and the legislature to de–jure multiparty elections as indicated by a score above 1 on the V–Dem multiparty elections indicator (v2elmulpar_osp). Closed autocracy if either no multiparty elections for the legislature take place (v2xlg_elecreg == 0) or the chief executive is not elected in direct or indirect multiparty elections. To identify whether this is the case, we take into account if there is no basic multiparty competition in elections (v2elmulpar_osp lt; 1) and the relative power of the Head of State (HoS) and the Head of Government (HoG) as well as the appointment procedures. The V–Dem variable v2ex_hosw identifies if the HoS (v2ex_hosw gt; 0.5) or HoG (v2ex_hosw lt; or equal to 0.5) is the chief executive. If the HoG is the chief executive, the variable v2expathhg indicates whether the HoG is directly (8) or indirectly (7) elected or appointed by the HoS (6). In the first case, we consider whether executive elections (v2xex_elecreg == 0) take place, in the second case whether legislative elections take place (v2xlg_elecreg == 0) and in the third case how HoS is selected as follows. The variable v2expathhs indicates whether the HoS is directly (7) or indirectly (6) elected. Thus, in the first case, we consider whether executive elections (v2xex_elecreg) take place, in the second case whether legislative elections take place and the legislature approves on HoG (v2xlg_elecreg == 0 and v2exaphog == 0). This also applies for the cases if the HoS is the chief executive.

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Marcus Tannenberg, Staffan I Lindberg, Valeriya Mechkova
QUESTION: How can the political regime overall be classified considering the competitiveness of access to power (polyarchy) as well as liberal principles?
RESPONSES:
0: Closed autocracy: No multiparty elections for the chief executive or the legislature.

1: Closed autocracy upper bound: Same as closed autocracy, but the confidence intervals of the multiparty election indicators overlap the level of electoral autocracies.

2: Electoral autocracy lower bound: Same as electoral autocracy, but the confidence intervals of one or both of the multiparty election indicators overlap the level of closed autocracies.

3: Electoral autocracy: De-jure multiparty elections for the chief executive and the legislature, but failing to achieve that elections are free and fair, or de-facto multiparty, or a minimum level of Dahl's institutional prerequisites of polyarchy as measured by V-Dem's Electoral Democracy Index (v2x_polyarchy).

4: Electoral autocracy upper bound: Same as electoral autocracy, but the upper bounds of the confidence intervals of the indicators for free and fair and multiparty elections and the Electoral Democracy Index overlap the level of electoral democracies.

5: Electoral democracy lower bound: Same as electoral democracy, but the lower bounds of the confidence intervals of the indicators for free and fair, or multiparty or the Electoral Democracy Index overlap the level of electoral autocracies.

6: Electoral democracy: Free and fair multiparty elections and a minimum level of Dahl's institutional prerequisites for polyarchy as measured by V- Dem's Electoral Democracy Index (v2x_polyarchy), but either access to justice, or transparent law enforcement, or liberal principles of respect for personal liberties, rule of law, and judicial as well as legislative constraints on the executive not satisfied as measured by V-Dem's Liberal Component Index (v2x_liberal).

7: Electoral democracy upper bound: Same as electoral democracy, but the confidence intervals of the indicators for access to justice, and transparent law enforcement, and the liberal component index overlap the level of liberal democracies.

8: Liberal democracy lower bound: Same as liberal democracy, but the confidence intervals of the indicators for access to justice, and transparent law enforcement, and the liberal component index reaches the level of electoral democracies.

9: Liberal democracy: De-facto free and fair multiparty elections and a minimum level of Dahl's institutional prerequisites for polyarchy as measured by V- Dem's Electoral Democracy Index (v2x_polyarchy) are guaranteed as well as access to justice, transparent law enforcement and the liberal principles of respect for personal liberties, rule of law, and judicial as well as legislative constraints on the executive satisfied as measured by V-Dem's Liberal Component Index (v2x_liberal).

ADDITIONAL VERSIONS: *_osp, *_codelow, *_codehigh
QUESTION: To what extent is the ideal of government accountability achieved?
CLARIFICATION: Government accountability is understood as constraints on the government's use of political power through requirements for justification for its actions and potential sanctions. We organize the sub-types of accountability spatially. Vertical accountability refers to the ability of a state's population to hold its government accountable through elections, horizontal accountability refers to checks and balances between institutions; and diagonal accountability captures oversight by civil society organizations and media activity.
SCALE: We provide two versions of this index. The first is the normalized output from the the hierarchical latent variable analysis. It is on an unbounded interval scale. The second, denoted by *_osp, is a version of this output which we scale using a standard normal cumulative distribution function. It is thus scaled low to high (0-1).

DATA RELEASE: 7-16.
AGGREGATION: To create an aggregate measure of accountability, we conduct a hierarchical analysis using all variables included in the three sub-indices of accountability: vertical (v2x_veracc), horizontal (v2x_horacc) and diagonal accountability (v2x_diagacc). This strategy assumes that overall accountability is a function of all variables included in each sub-index, though the sub-indices structure this relationship.

VARIABLE TYPE: D
PROJECT MANAGER(S): Kyle L. Marquardt, Valeriya Mechkova
ADDITIONAL VERSIONS: *_osp, *_codelow, *_codehigh
QUESTION: To what extent is the ideal of vertical government accountability achieved?
CLARIFICATION: Vertical accountability captures the extent to which citizens have the power to hold the government accountable. The mechanisms of vertical accountability include formal political participation on part of the citizens — such as being able to freely organize in political parties — and participate in free and fair elections, including for the chief executive.
SCALE: We provide two versions of this index. The first is the normalized output from the the hierarchical latent variable analysis. It is on an unbounded interval scale. The second, denoted by *_osp, is a version of this output which we scale using a standard normal cumulative distribution function. It is thus scaled low to high (0-1).
SOURCE(S): v2x_elecreg v2elembaut v2elembcap v2elrgstry v2elirreg v2elintim v2elmulpar v2elfrfair v2expathhs v2ex_legconhos v2expathhg v2x_suffr v2exaphogp v2ex_hosw v2x_suffr v2psparban v2psbars v2psoppaut
DATA RELEASE: 7-16.
AGGREGATION: Vertical accountability consists of two main components: elections and political parties. We operationalize electoral accountability with three components: 1) an aggregate measure the quality of elections; 2) the percent of enfranchised population and 3) whether the chief executive is directly or indirectly elected. We model non-electoral regimes as having no suffrage and the quality of elections as a function of having an electoral regime (v2x_elecreg). Quality of elections consists of seven variables measuring different aspects of national elections for the executive and legislature. Specifically, we include autonomy and capacity of the electoral management body (v2elembaut) and (v2elembcap); accuracy of the voter registry (v2elrgstry), intentional irregularities conducted by the government and opposition (v2elirreg); intimidation and harassment by the government and its agents (v2elintim); to what extent the elections were multi-party in practice (v2elmulpar); and an overall measure for the freedom and fairness of elections (v2elfrfair). This is a modified version of the V-Dem Clean elections index (v2xel_frefair). We added the variable v2elmulpar, which is theoretically important for accountability, and we removed v2elvotbuy and v2elpeace, as they have low loadings.

We measure suffrage as the percentage of people that have the legal right to vote (v2x_suffr) to proxy the inclusivity of the exercise of electoral accountability. To account for the differences between states which have an executive subject to elections, we include a dichotomous indicator of whether or not the head of the executive either the head of state or head of government — whoever has more relative power over the appointment and dismissal of cabinet ministers as measured by v2ex_hosw is subjected to direct or indirect elections (v2expathhs v2ex_legconhos v2expathhg v2exaphogp).

The second form of vertical accountability focuses on political parties, which we model as a hierarchical node. This node includes variables that capture whether there are barriers to forming a party and how restrictive they are (v2psparban) and (v2psbars), as well as the degree to which opposition parties are independent of the ruling regime (v2psoppaut).
CITATION: Lührmann et al. (2020); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

ADDITIONAL VERSIONS: *_osp, *_codelow, *_codehigh
QUESTION: To what extent is the ideal of diagonal government accountability achieved?
CLARIFICATION: Diagonal accountability covers the range of actions and mechanisms that citizens, civil society organizations CSOs, and an independent media can use to hold the government accountable. These mechanisms include using informal tools such as social mobilization and investigative journalism to enhance vertical and horizontal accountability.
SCALE: We provide two versions of this index. The first is the normalized output from the the hierarchical latent variable analysis. It is on an unbounded interval scale. The second, denoted by *_osp, is a version of this output which we scale using a standard normal cumulative distribution function. It is thus scaled low to high (0-1).
SOURCE(S): v2mecenefm v2mecenefi v2meharjrn v2mecrit v2mebias v2merange v2meslfcen v2csprtcpt v2cseeorgs v2csreprss v2cldiscm v2cldiscw v2clacfree v2dlengage
DATA RELEASE: 7-16.
AGGREGATION: We model this form of accountability as a function of four hierarchical nodes: media freedom, civil society characteristics, freedom of expression, and the degree to which citizens are engaged in politics.
The media freedom node incorporates variables representing two broad dimensions. The first dimension regards the extent to which the government attempts to censor the media (v2mecenefm) and information on the Internet (v2mecenefi), as well as the extent to which government and other powerful actors harass journalists (v2meharjrn). The second dimension concerns the work of the media itself, namely the extent to which: the media criticizes the government at least occasionally (v2mecrit); there is bias against opposition candidates (v2mebias); the media offers a wide array of political perspectives in their coverage (v2merange); and there is self-censorship on salient issues for the government (v2meslfcen). The media freedom node is an expanded version of the V-Dem Alternative sources of information index (v2xme_altinf).
Finally, we use the components of the V-Dem core index of civil society to account for the opportunity of citizens to channel their interests and potentially oppose the government and its policies in an organized way through a robust, self-organized and autonomous civil society organizations. The indicators included in this node are: popular and voluntary participation in CSOs, (v2csprtcpt), government control to the entry and exit of CSOs into the public life, (v2cseeorgs), and government oppression of CSOs (v2csreprss).
The freedom of expression node incorporates variables regarding the degree to which men and women are free to discuss political issues without fear of harassment (v2cldiscm and

v2cldiscw), as well as an indicator on the freedom of academic and cultural expression (v2clacfree).
Finally, we incorporate a variable representing engaged society (v2dlengage), which gives information on the width and depth of public deliberations when important policy changes are being considered.

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Kyle L. Marquardt, Valeriya Mechkova
ADDITIONAL VERSIONS: *_osp, *_codelow, *_codehigh
QUESTION: To what extent is the ideal of horizontal government accountability achieved?
CLARIFICATION: Horizontal accountability concerns the power of state institutions to oversee the government by demanding information, questioning officials and punishing improper behavior. This form of accountability ensures checks between institutions and prevents the abuse of power. The key agents in horizontal government accountability are: the legislature; the judiciary; and specific oversight agencies such as ombudsmen, prosecutor and comptroller generals.
SCALE: We provide two versions of this index. The first is the normalized output from the the hierarchical latent variable analysis. It is on an unbounded interval scale. The second, denoted by *_osp, is a version of this output which we scale using a standard normal cumulative distribution function. It is thus scaled low to high (0-1).
SOURCE(S): v2juhcind v2juncind v2juhccomp v2jucomp v2exrescon v2lgotovst v2lginvstp v2lgbicam v2lgqstexp
DATA RELEASE: 7-16.
AGGREGATION: We capture the extent to which the judiciary, the legislature and other oversight agencies hold the government to account by modeling each of these factors as separate hierarchical nodes.
The judiciary node speaks to the degree to which members of the executive compromise horizontal accountability by quot;unlawfully encroachingquot; on the legitimate authority of the judiciary branch. To capture that we use the indicators from the V-Dem judicial constraints on the executive index (v2x_jucon).
To model the degree to which a legislature facilitates horizontal accountability we model whether or not a legislature exists a dichotomized version of v2lgbicam, and legislature

activities as a function of this variable. The key function of a legislature in terms of horizontal accountability is to scrutinize government officials' potential misconduct by demanding information for their policies and decisions, and taking specific actions in case of irregularities. We use as baseline the indicators from the V-Dem legislative constraints on the executive index (v2xlg_legcon): the degree to which: 1 the legislature routinely questions the executive (v2lgqstexp); and 2 a legislature is likely to investigate and produce a decision unfavorable to the executive, if the latter were engaged in an illegal or unethical activity (v2lginvstp). We exclude the legislature opposition parties (v2lgoppart) as this aspect is part of vertical accountability.
Finally, we include a variable regarding the degree to which other state bodies comptroller general, general prosecutor, or ombudsman are likely to investigate and report on potential illegal or unethical activities on part of the executive (v2lgotovst).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
QUESTION: To what extent is the power base of the chief executive' determined by the confidence of the legislature?
CLARIFICATION: Representing one of five regime dimensions, each of which may be more or less present in any given case, this index taps into the extent to which the dismissal of the chief executive depends on the confidence of the legislature.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2expathhs v2expathhg v2exremhsp_ord v2exrmhsol_2 v2exrmhsol_3 v2exrmhsol_4 v2exhoshog v2ex_hosw
DATA RELEASE: 9-16.
AGGREGATION: The index is based on whether the quot;chief executivequot; can be

dismissed by the legislature (without having to level accusations of unlawful activity and without the involvement of any other agency). In nominally dual systems, where the head of state (HOS) and the head of government (HOG) are not the same individual, we determine who is the quot;chief executivequot; by comparing HOS and HOG powers over the appointment and dismissal of cabinet ministers. We aggregate across the two executives by taking the average weighted by their relative powers over cabinet formation and dismissal.

PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is rule based on personal authority?
CLARIFICATION: Neopatrimonial rule reflects the idea that personalistic forms of authority pervade formal regime institutions (Clapham, 1985). According to Bratton and Van de Walle (1997) a neopatrimonialism regime is one that combines clientelistic political relationships, strong and unconstrained presidents and the use of public resources for political legitimation.

The index is constructed using Bayesian Factor Analysis of 16 indicators representing these three concepts. The sixteen indicators are those included in the three sub-indices: Clientelism, Presidentialism and Regime Corruption. The point estimates for this index have been reversed such that the directionality is opposite to the input variables. That is, lower scores indicate a normatively better situation (e.g. more democratic) and higher scores a normatively worse situation (e.g. less democratic). Note that this directionality is opposite of that of other V-Dem indices, which generally run from normatively worse to better.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2elvotbuy v2dlencmps v2psprlnks v2exrescon v2lgotovst v2lgfunds v2lginvstp v2juhcind v2juncind v2juhccomp v2jucomp v2elembaut v2exembez v2exbribe v2lgcrrpt v2jucorrdc v2x_elecreg
DATA RELEASE: 9-16.
AGGREGATION: The index is formed by taking the reversed point estimates (so that higher scores = more neopatrimonialism) from a Bayesian factor analysis model of the indicators for vote buying (v2elvotbuy), particularistic vs. public goods (v2dlencmps), party linkages (v2psprlnks), executive respects constitution (v2exrescon), executive oversight (v2lgotovst), legislature controls resources (v2lgfunds), legislature investigates the executive in practice (v2lginvstp), high court independence (V2juhcind), low court independence (v2jucnind), compliance with high court (v2juhccomp), compliance with judiciary (v2jucomp), electoral management body autonomy (v2elembaut), executive embezzlement and theft (v2exembez), executive bribes and corrupt exchanges (v2exbribe), legislative corruption (v2lgcrrpt) and judicial corruption (v2jucorrdc).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the regime characterized by presidentialism?
CLARIFICATION: Presidentialism means the quot;systemic concentration of political power in the hands of one individual who resists delegating all but the most trivial decision making tasksquot; (Bratton and Van de Walle, 1997: 63). It relates closely to V-Dem's index of Horizontal Accountability (v2x_horacc) but focuses more specifically on the extent to which the President is free from constraints by other institutions or actors. The point estimates for this index have been reversed such that the directionality is opposite to the input variables. That is, lower scores indicate a normatively better situation (e.g. more democratic) and higher scores a normatively worse situation (e.g. less democratic). Note that this directionality is opposite of that of other V-Dem indices, which generally run from normatively worse to better.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2exrescon v2lgotovst v2lgfunds v2lginvstp v2juhcind v2juncind v2juhccomp v2jucomp v2elembaut v2lgbicam
DATA RELEASE: 9-16.
AGGREGATION: The index is formed by taking the reversed point estimates (so that higher scores = more presidentialism) from a Bayesian factor analysis model of the indicators for

executive respect for the constitution (v2exrescon), whether there are mechanisms for oversight of the executive other than the legislature (v2lgotovst). For legislative constraints, the index includes an indicator of whether the legislature controls its own resources (v2lgfunds) and investigates the executive in practice (v2lginvstp). There are four indicators of judicial constraints on the executive: high court independence (v2juhcind), lower court independence (v2jucnind), compliance with high court (v2juhccomp) and compliance with judiciary (v2jucomp). Finally, the index includes a measure of autonomy of the electoral management body (v2elembaut) that captures whether or not the President can influence its decisions and actions.

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Rachel Sigman, Staffan Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent do political actors use political office for private or political gain?
CLARIFICATION: In systems of neopatrimonial rule, politicians use their offices for private and/or political gain. This index relates closely to V-Dem's political corruption index (v2x_corr), but focuses on a more specific set of actors – those who occupy political offices - and a more specific set of corrupt acts that relate more closely to the conceptualization of corruption in literature on neopatrimonial rule. The point estimates for this index have been reversed such that the directionality is opposite to the input variables. That is, lower scores indicate a normatively better situation (e.g. more democratic) and higher scores a normatively worse situation (e.g. less democratic). Note that this directionality is opposite of that of other V-Dem indices, which generally run from normatively worse to better.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2exembez v2exbribe v2lgcrrpt v2jucorrdc
DATA RELEASE: 9-16.
AGGREGATION: The index is formed by taking the reversed point estimates (so that higher scores = more regime corruption) from a Bayesian factor analysis model of the indicators for executive executive embezzlement (v2exembez), executive bribes (v2exbribe), legislative corruption (v2xlgcrrpt) and judicial corruption (v2jucorrdc).

COUNTRY-YEAR AGGREGATION: Day-weighted mean

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Svend-Erik Skaaning
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is physical integrity respected?
CLARIFICATION: Physical integrity is understood as freedom from political killings and torture by the government. Among the set of civil liberties, these liberal rights are the most relevant for political competition and accountability. The index is based on indicators that reflect violence committed by government agents and that are not directly referring to elections.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2cltort v2clkill
DATA RELEASE: 6-16.
AGGREGATION: We estimate the index by averaging two indicators: freedom from torture (v2cltort) and freedom from political killings (v2clkill).
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

(2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Staffan I. Lindberg
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: Index of (political) exclusion by social group
CLARIFICATION: Exclusion is when individuals are denied access to services or participation in governed spaces (spaces that are part of the public space and the government should regulate, while excluding private spaces and organizations except when exclusion in those private spheres is linked to exclusion in the public sphere) based on their identity or belonging to a particular group. The point estimates for this index have been reversed such that the directionality is opposite to the input variables. That is, lower scores indicate a normatively better situation (e.g. more democratic) and higher scores a normatively worse situation (e.g. less democratic). Note that this directionality is opposite of that of other V-Dem indices, which generally run from normatively worse to better.
SCALE: Interval, from low to high (0-1)
SOURCE(S): v2pepwrsoc v2clsocgrp v2peapssoc v2peasjsoc v2peasbsoc
DATA RELEASE: 9-16.
AGGREGATION: The index is formed by taking the point estimates from a Bayesian factor analysis model of the indicators power distributed by social group (v2pepwrsoc), social group equality in respect for civil liberties (v2clsocgrp), access to public services by social group (v2peapssoc), access to state jobs by social group (v2peasjsoc), and access to state business opportunities by social group (v2peasbsoc).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

2.3.34 Other Indices Created Using V-Dem Data - Corruption

The *Corruption Index* uses V-Dem data but is not a subcomponent of the V-Dem Democracy Indices. Please see Appendix A of the V -Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.34.1 Political corruption (v2x_corr)

Long tag: vdem_cy_v2x_corr

Original tag: v2x_corr

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: McMann et al. (2016), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes,

von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How pervasive is political corruption?
CLARIFICATION: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt unlike the other V-Dem variables that generally run from less democratic to more democratic situation. The corruption index includes measures of six distinct types of corruption that cover both different areas and levels of the polity realm, distinguishing between executive, legislative and judicial corruption. Within the executive realm, the measures also distinguish between corruption mostly pertaining to bribery and corruption due to embezzlement. Finally, they differentiate between corruption in the highest echelons of the executive at the level of the rulers/cabinet on the one hand, and in the public sector at large on the other. The measures thus tap into several distinguished types of corruption: both 'petty' and 'grand'; both bribery and theft; both corruption aimed and influencing law making and that affecting implementation.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_pubcorr v2x_execorr v2lgcrrpt v2jucorrdc
DATA RELEASE: 5-16.
AGGREGATION: The index is arrived at by taking the average of (a) public sector corruption index (v2x_pubcorr); (b) executive corruption index (v2x_execorr); (c) the indicator for legislative corruption (v2lgcrrpt); and (d) the indicator for judicial corruption (v2jucorrdc). In other words, these four different government spheres are weighted equally in the resulting index. We replace missing values for countries with no legislature by only taking the average of a, b and d.

QUESTION: How politically empowered are women?
CLARIFICATION: Women's political empowerment is defined as a process of increasing capacity for women, leading to greater choice, agency, and participation in societal decision-making. It is understood to incorporate three equally-weighted dimensions: fundamental civil liberties, women's open discussion of political issues and participation in civil society organizations, and the descriptive representation of women in formal political positions.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_gencl v2x_gencs v2x_genpp

ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: Do citizens enjoy the right to private property?
CLARIFICATION: Private property includes the right to acquire, possess, inherit, and sell private property, including land. Limits on property rights may come from the state which may legally limit rights or fail to enforce them; customary laws and practices; or religious or social norms. This question concerns the right to private property, not actual ownership of property.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2clprptym v2clprptyw
DATA RELEASE: 1-16.

YEARS: 1789-2025

2.3.37 Other Indices Created Using V-Dem Data - Direct Democracy

The *Direct Democracy Index* uses V-Dem data but is not a subcomponent of the V-Dem Democracy Indices. Please see Appendix A of the V -Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.37.1 Popular initiative index (v2xdd_i_ci)

Long tag: vdem_cy_v2xdd_i_ci

Original tag: v2xdd_i_ci

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): David Altman
QUESTION: To what extent is the *popular initiative utilized*?
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2ddlexci v2ddsigpci v2ddsiglci v2ddsigdci v2ddpartci v2ddapprci v2ddspmci v2ddadmci v2ddyrci v2ddthreci
DATA RELEASE: 7-16.
AGGREGATION: This index receives a maximum score of two resulting from the addition of the two terms easiness of initiation and easiness of approval of popular initiatives, where each term obtains a maximum value of one. The ease of initiation is measured by:

- The existence of a direct democracy process v2ddlexci,
- The number of signatures needed v2ddsigpci, and
- Time-limits to circulate the signatures v2ddsigdci.

Easiness of approval is measured by the surface of the polygon determined by:

- Participation quorum v2ddpartci,
- Approval quorum v2ddapprci, and
- Supermajority v2ddspmci.

For an elaboration of the interaction among quorums, see David Altman (2017). The resulting score is then multiplied with (d) district majority v2ddadmci. Consequences are measured by:

- The legal status of the decision made by citizens binding or merely consultative v2ddlexci, and
- The frequency and degree of success with which direct popular votes have been held in the past v2ddthreci. The baseline for those countries that have the legal apparatus to hold a particular MDD but have never experienced one is 0.1.

The index is aggregated using this formula:

$$v2xdd_i_ci = \&[(IF\ v2ddlexci\ gt; 0, 1, 0) \times (1 - v2ddsigpci))$$

$$\&\times(IF\ v2ddsigdci\ = 0, 1, 0.5 + v2ddsigdci/365/2)$$

$$\&+(v2ddsigdci) \cap (v2ddpartci) \cap (v2ddspmci)]$$

$$\&\times(0.5 + 1 - v2ddadmci/2)]$$

$$\&\times(IF\ v2ddlexci = 1, 0.75, 1 \times IF\ years\ since\ last\ successful$$

$$\& eventlt; 6, then\ v2ddthreci = 1, afterwards\ decr$$

$$\& then\ v2ddthreci = 1, afterwards\ decreases\ by\ 0.06\ units\ per\ year$$

$$\& until\ 0.1;\ if\ the\ event\ was\ not\ successful\ during\ the\ first\ years$$

$$\& v2ddthrerci{=}0.9,\ afterwards\ decreases\ by\ 0.1$$

$$\& units\ per\ year\ until\ 0.1)$$

COUNTRY-YEAR AGGREGATION: Last
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1900-2025

2.3.37.2 Popular referendum index (v2xdd_i_rf)

Long tag: vdem_cy_v2xdd_i_rf

Original tag: v2xdd_i_rf

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): David Altman
QUESTION: To what extent is the *referendum* utilized?
SCALE: Interval, from low to high (0-2).
SOURCE(S): v2ddlexrf v2ddsigprf v2ddsigdrf v2ddpartrf v2ddapprrf v2ddspmrf v2ddadmrf v2ddyrrf v2ddthrerf
DATA RELEASE: 7-16.
AGGREGATION: This index receives a maximum score of two resulting from the addition of the two terms easiness of initiation and easiness of approval of referendums, where each term obtains a maximum value of one. The ease of initiation is measured by:

- The existence of a direct democracy process v2ddlexrf,
- The number of signatures needed v2ddsigprf,
- Time-limits to circulate the signatures v2ddsigdrf.

Easiness of approval is measured by the surface of the polygon determined by:

- Participation quorum v2ddpartrf,
- Approval quorum v2ddapprrf, and
- Supermajority v2ddspmrf. For an elaboration of the interaction among quorums, see David Altman 2016.

The resulting score is then multiplied with d district majority v2ddadmrf. Consequences are measured by:

- The legal status of the decision made by citizens binding or merely consultative v2ddlexrf, and
- The frequency and degree of success with which direct popular votes have been held in the past v2ddthrerf. The baseline for those countries that have the legal apparatus to hold a particular MDD but have never experienced one is 0.1.

The index is aggregated using this *formula*:

$$v2xdd_i_rf = \&[(IF\ v2ddlexrfgt; 0, 1, 0) \times (1 - v2ddsigprf)$$

$$\&\times(IF\ v2ddsigdrf = 0, 1, .5 + (v2ddsigdrf \times 2)/365)$$

$$\&+(v2ddpartrf \cap v2ddapprrf \cap v2ddspmrf)] \times (0.5 + (1 - v2ddadmrf)/2)$$

$$\&\times(IF\ v2ddlexrf = 1, .75, 1) \times (IF\ years\ since\ last\ successful\ event\ lt; 6,$$

$$\& then\ v2ddthrerf = 1, afterwards\ decreases\ by\ .06 units\ per\ year\ until\ .1,$$

$$\& if\ the\ event\ was\ not\ successful\ during\ the\ first\ years\ v2ddthrerf = .9,$$

$$\& afterwards\ decreases\ by\ 0.1 units\ per\ year\ until\ .1)$$

COUNTRY-YEAR AGGREGATION: Last
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1900-2025

2.3.37.3 Obligatory referendum index (v2xdd_i_or)

Long tag: vdem_cy_v2xdd_i_or

Original tag: v2xdd_i_or

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): David Altman
QUESTION: To what extent is the *obligatory referendum* utilized?
SCALE: Interval, from low to high (0-2).
SOURCE(S): v2ddlexor v2ddpartor v2ddappor v2ddspmor v2ddadmor v2ddthreor
DATA RELEASE: 7-16.
AGGREGATION: This index receives a maximum score of two resulting from the addition of the two terms easiness of initiation and easiness of approval of obligatory referendums, where each term obtains a maximum value of one.

The ease of initiation is measured by:

- The existence of a direct democracy process v2ddlexor.

Easiness of approval is measured by the surface of the polygon determined by:

- Participation quorum v2ddpartor
- Approval quorum v2ddappor, and
- Supermajority V2ddspmor. For an elaboration of the interaction among quorums, see David Altman 2017.

The resulting score is then multiplied with (d) district majority v2ddadmor.
Consequences are measured by:

- The legal status of the decision made by citizens binding or merely consultative v2ddlexor, and
- The frequency and degree of success with which direct popular votes have been held in the past v2ddthreor.

The index is aggregated using this formula:

$$v2xdd_i_or = \&(IF\ v2ddlexorgt; 0, 1, 0) + (v2ddpartor) \cap v2ddapp$$

$$\&\times((.5 + (1 - v2ddadmor)/2) \times (IF\ v2ddlexor = 1, .75, 1)$$

$$\&\times(IF\ years\ since\ last\ successful\ eventlt; 6, then\ v2ddthreor = 1,$$

$$\&afterwards\ decreases\ by\ .06\ units\ per\ year\ until\ .1,$$

$$\&if\ the\ event\ was\ not\ successful\ during\ the\ first\ years\ v2ddthreor = .9,$$

$$\&afterwards\ decreases\ by\ .1\ units\ per\ year\ until\ .1)$$

2.3.38 Other Indices Created Using V-Dem Data - Civil Society

The *Civil Society Index* uses V-Dem data but is not a subcomponent of the V-Dem Democracy Indices. Please see Appendix A of the V -Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.38.1 Core Civil Society Index (v2xcs_ccsi)

Long tag: vdem_cy_v2xcs_ccsi

Original tag: v2xcs_ccsi

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Bernhard et al. (2017), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Michael Bernhard
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How robust is civil society?
CLARIFICATION: The sphere of civil society lies in the public space between the private sphere and the state. Here, citizens organize in groups to pursue their collective interests and ideals. We call these groups civil society organizations CSOs. CSOs include, but are by no means limited to, interest groups, labor unions, spiritual organizations if they are engaged in civic or political activities, social movements, professional associations, charities, and other

non-governmental organizations.
The core civil society index CCSI is designed to provide a measure of a robust civil society, understood as one that enjoys autonomy from the state and in which citizens freely and actively pursue their political and civic goals, however conceived.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2cseeorgs v2csreprss v2csprtcpt
DATA RELEASE: 1-16.
AGGREGATION: The index is formed by taking the point estimates from a Bayesian factor analysis model of the indicators for CSO entry and exit (v2cseeorgs), CSO repression (v2csreprss) and CSO participatory environment (v2csprtcpt).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: Bernhard et al. (2017); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1789-2025

2.3.39 Other Indices Created Using V-Dem Data - Elections

The *Elections Index* uses V-Dem data but is not a subcomponent of the V-Dem Democracy Indices. Please see Appendix A of the V -Dem codebook (`https://www.v-dem.net/documents/70/codebook_v16.pdf`) for an overview of all indices, component-indices, and lower-level indices.

2.3.39.1 Electoral Regime Index (v2x_elecreg)

Long tag: vdem_cy_v2x_elecreg

Original tag: v2x_elecreg

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A
PROJECT MANAGER(S): Staffan I. Lindberg, Jan Teorell
QUESTION: At this time, are regularly scheduled national elections on course, as stipulated by election law or well-established precedent?
CLARIFICATION: Coded 0 until an executive or legislative election is held, defined by v2xel_elecpres and v2xel_elecparl, then set to 1 until any of the following two events occur (if they occur): (a) that the election was quot;abortedquot;, meaning that those elected did not resume power, as defined by v2x_hosabort and v2x_legabort; or (b) an quot;electoral interruptionquot;, meaning that either the legislature was shut down, as defined by v2xlg_leginter, or there was an executive coup, as defined by v2x_hosinter; in the case of (a) or (b), v2x_elecreg is set to 0 until there is another election. The operational indicator of an "aborted" executive election (v2x_hosabort) is that v2expathhs did not turn 7 within 12 months after the election, for a legislative election (v2x_legabort) that v2lgbicam did not turn positive within 12 months after the election. An interruption of the electoral regime

occurring through the HOS, *e.g.* a coup d'etat, is indicated by v2x_hosinter as a change in v2xel_elecpres, meaning v2expathhs turned from 7 to something else, with the exception of 6, approval by the legislature (in case the legislature remained in place). An interruption of the electoral regime occurring through the legislature is defined by v2xlg_leginter based on v2lgbicam turning 0. We note that the coding of v2x_elecreg does not merely follow mechanically from the scores on these other variables, as the coding of v2x_elecreg has also been cross-checked and validated by research assistants. An executive and a legislative electoral regime cannot be separated since they form an integral part, where an aborted legislature is interpreted as a signal that also the executive is not standing for election any longer, and vice versa.
RESPONSES:
0: No.
1: Yes.
SCALE: Dichotomous.

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the electoral principle of democracy achieved?
CLARIFICATION: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected directly or indirectly through elections.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_frassoc_thick v2x_suffr v2xel_frefair v2x_elecoff
DATA RELEASE: 3-16.
AGGREGATION: The electoral component index is operationalized as a chain defined by its weakest link of freedom of association, suffrage, clean elections, and elected executive. The index is thus aggregated using this formula:
$v2x_EDcomp_thick =$
$.125 * v2x_frassoc_thick + .125 * v2x_suffr + .125 * v2xel_frefair + .125 * v2x_elecoff + .5 * v2x_frassoc_thick * v2x_suffr * v2xel_frefair * v2x_elecoff$

PROJECT MANAGER(S): Pamela Paxton, Svend-Erik Skaaning
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd

QUESTION: Are citizens able to openly discuss political issues in private homes and in public spaces?
CLARIFICATION: This indicator specifies the extent to which citizens are able to engage in private discussions, particularly on political issues, in private homes and public spaces restaurants, public transportation, sports events, work etc. without fear of harassment by other members of the polity or the public authorities. We are interested in restrictions by the government and its agents but also cultural restrictions or customary laws that are enforced by other members of the polity, sometimes in informal ways.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2cldiscm v2cldiscw
DATA RELEASE: 1-16.
AGGREGATION: We estimate the index by averaging two indicators: freedom of discussion for men (v2cldiscm) and women (v2cldiscw).
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

QUESTION: Do citizens enjoy freedom of movement and residence?
CLARIFICATION: This indicator specifies the extent to which citizens are able to move freely, in daytime and nighttime, in public thoroughfares, across regions within a country, and to establish permanent residency where they wish. Note that restrictions in movement might be imposed by the state and/or by informal norms and practices. Such restrictions sometimes fall on rural residents, on specific social groups, or on dissidents.
Do *not* consider restrictions in movement that are placed on ordinary non-political criminals. Do not consider restrictions in movement that result from crime or unrest.
SCALE: Interval, from low to high (0-1).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Jan Teorell
QUESTION: To what extent is the legislature directly or indirectly elected?
CLARIFICATION: If the legislature is unicameral, v2xex_elecleg is measured as the proportion of legislators directly elected + half of the proportion that are indirectly elected. If the legislature is bicameral and the upper house is involved in the appointment of the chief executive, the same proportion of directly and half of the indirectly elected legislators is calculated for the upper house; the scores for the lower and upper houses are then averaged.
Note that a popular election is minimally defined and also includes sham elections with limited suffrage and no competition.
This index is useful primarily for aggregating higher-order indices and should not necessarily be interpreted as an important element of democracy in its own right. Since the variables coding the share of directly and indirectly elected legislators are not yet fully in sync for all country dates, a few observations now receive an index value larger than 1.
RESPONSES:
Proportion.
SCALE: Interval.

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Allen Hicken
ADDITIONAL VERSIONS: *_codelow, *_codehigh
QUESTION: To what extent are political parties institutionalized?
CLARIFICATION: Party institutionalization refers to various attributes of the political parties in a country, *e.g.*, level and depth of organization, links to civil society, cadres of party activists, party supporters within the electorate, coherence of party platforms and ideologies, party-line voting among representatives within the legislature. A high score on these attributes generally indicates a more institutionalized party system.
This index considers the attributes of all parties with an emphasis on larger parties, *i.e.*, those that may be said to dominate and define the party system.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2psorgs v2psprbrch v2psprlnks v2psplats v2pscohesv v2lgello
DATA RELEASE: 1-16. Release 1-6 Party system institutionalization index, release 7 changed to Party institutionalization index.
AGGREGATION: The index is formed by adding scaled indicators for party organizations (v2psorgs), party branches (v2psprbrch), party linkages (v2psprlnks), distinct party platforms (v2psplats), and legislative party cohesion (v2pscohesv, set to missing when the lower chamber of legislature (v2lgello) does not exist). The index is then converted to its CDF in order to range from 0 to 1.

CITATION: Bizzarro Neto et al. (2017); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Michael Coppedge, Svend-Erik Skaaning
QUESTION: Are the executive and legislature controlled by different political parties?
CLARIFICATION: This variable is a reordered version of the continuous measurement model estimates for indicator v2psnatpar: National party control. After reordering, the positive extreme signifies Divided party control. A Different parties or individuals unconnected to parties control the executive and the legislature or B Executive power is divided between a president/monarch and a prime minister, each of which belongs to different parties; or between a non-partisan monarch and a prime minister. The intermediate values signify Unified coalition control. A single multi-party coalition controls the executive and legislative branches of the national government. This is true almost by definition in a parliamentary system where a single coalition gathers together a majority of seats. And the negative extreme signifies quot;Unified party control. A single party controls the executive and legislative branches of the national government. This is true almost by definition in a parliamentary system where a single party has a majority of seats.quot;
SCALE: Interval, from low to high.
SOURCE(S): v2psnatpar v2psnatpar_ord
NOTES: V-Dem originally intended to generate indices to measure concepts inspired by Arend Lijphart's two dimensions of consensus vs. majoritarian democracy. The project no longer plans to produce such indices. Instead, it offers the two indices, the Divided party control index and the Division of power index, which are conceptually thinner than Lijphart's concepts and not equivalent substitutes for them. However, these alternatives are useful for some purposes.
DATA RELEASE: 6-16. For Version 6 as Divided party control of legislature index v2x_lgdivparctrl, 7 modified to Divided party control index.

AGGREGATION: The reordering is accomplished in two steps. First, 5 is subtracted from v2psnatpar when the ordinal version of this variable, v2psnatpar_ord, is 2. This moves the ordinal score corresponding to unified party control to the lowest values. Then the result is standardized to have a mean of 0 and a standard deviation of 1.
COUNTRY-YEAR AGGREGATION: Last

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Michael Coppedge, Svend-Erik Skaaning
QUESTION: Are there elected local and regional governments, and — if so — to what extent can they operate without interference from unelected bodies at the local level?
CLARIFICATION: The lowest score would be reserved for a country that has no elected local or regional governments, or where all or nearly all elected offices are subordinate to non-elected offices at any local or regional level that exists. A high score would be accorded to a country in which both local and regional governments are elected and able to operate without restrictions from unelected actors at the local or regional level with the exception of judicial bodies. A medium score can be achieved in various ways: there are strong elected governments at the local level but not the regional level, or vice versa; or both local and regional governments elect an executive but not an assembly; or elected and non-elected offices are approximately equal in power at the local and regional levels; or various combinations of these scenarios.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2ellocgov v2elreggov v2ellocelc v2elsrgel v2ellocpwr v2elrgpwr
NOTES: V-Dem originally intended to generate indices to measure concepts inspired by Arend Lijphart's two dimensions of consensus vs. majoritarian democracy. The project no longer plans to produce such indices. Instead, it offers the two indices, the Divided party control index and the Division of power index, which are conceptually thinner than Lijphart's concepts and not equivalent substitutes for them. However, these alternatives are useful for some purposes.
DATA RELEASE: 6-16.
AGGREGATION: This index is an equally weighted average of a local government index and a regional government index. The local government index is the product of a dummy variable for the existence of local government (v2ellocgov), a recoded version of Local government elected (v2ellocelc), and a CDF of local offices relative power (v2ellocpwr). Local

governments are recoded as unelected 0 if they did not exist or if data is missing. They are coded 0.5 if an executive is elected but no assembly, and 1 if an assembly is elected, with or without an executive. The regional government index is calculated the same way but using the existence of regional government (v2elreggov), regional government elected (v2elsrgel), and regional offices relative power (v2elrgpwr).

ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is academic freedom respected?
CLARIFICATION: Academic freedom is understood as the right of academics, without constriction by prescribed doctrine, to freedom of teaching and discussion, freedom in carrying out research and disseminating and publishing the results thereof, freedom to express freely their opinion about the institution or system in which they work, freedom from institutional censorship and freedom to participate in professional or representative academic bodies (UNESCO 1997 Recommendation concerning the Status of Higher-Education Teaching Personnel). The Academic Freedom Index is designed to provide an aggregated measure that captures the de facto realization of academic freedom, including the degree to which higher-education institutions are autonomous.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2cafres v2cafexch v2cainsaut v2casurv v2clacfree
DATA RELEASE: 10-16.
AGGREGATION: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: freedom to research and teach (v2cafres), freedom of academic exchange and dissemination (v2cafexch), institutional autonomy (v2cainsaut), campus integrity (v2casurv), freedom of academic and cultural expression

(v2clacfree).

2.3.43 Digital Society Survey - Coordinated Information Operations

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding

exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.3.43.1 Government dissemination of false information domestic (v2smgovdom)

CONVERGENCE: Model parameters with convergence issues: universal thresholds.

2.3.44 Digital Society Survey - Digital Media Freedom

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.3.44.1 Government Internet filtering capacity (v2smgovfilcap)

Long tag: vdem_cy_v2smgovfilcap

Original tag: v2smgovfilcap

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: Independent of whether it actually does so in practice, does the government have the technical capacity to censor information (text, audio, images, or video) on the Internet by filtering (blocking access to certain websites) if it decided to?
RESPONSES:
0: The government lacks any capacity to block access to any sites on the Internet.
1: The government has limited capacity to block access to a few sites on the Internet.
2: The government has adequate capacity to block access to most, but not all, specific sites on the Internet if it wanted to.
3: The government has the capacity to block access to any sites on the Internet if it wanted to.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How frequently does the government censor political information (text, audio, images, or video) on the Internet by filtering (blocking access to certain websites)?
RESPONSES:
0: Extremely often. It is a regular practice for the government to remove political content, except to sites that are pro-government.
1: Often. The government commonly removes online political content, except sites that are pro-government.
2: Sometimes. The government successfully removes about half of the critical online political content.
3: Rarely. There have been only a few occasions on which the government removed political content.
4: Never, or almost never. The government allows Internet access that is unrestricted, with the exceptions mentioned in the clarifications section.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: **?**; Pemstein et al. (2026)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Independent of whether it actually does so in practice, does the government have the technical capacity to actively shut down domestic access to the Internet if it decided to?

CLARIFICATION: A domestic Internet connection is any connection originating physically within the country, whether over wired, wireless, or satellite networks. This question asks what proportion of potential Internet connections of domestic origin the government has the capacity to render inoperable.
RESPONSES:
0: The government lacks the capacity to shut down any domestic Internet connections.
1: The government has the capacity to shut down roughly a quarter of domestic access to the Internet.
2: The government has the capacity to shut down roughly half of domestic access to the Internet.
3: The government has the capacity to shut down roughly three quarters of domestic access to the Internet.
4: The government has the capacity to shut down all, or almost all, domestic access to the Internet.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: **?**; Pemstein et al. VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How often does the government shut down domestic access to the Internet?
RESPONSES:
0: Extremely often. It is a regular practice for the government to shut down domestic access to the Internet.
1: Often. The government shut down domestic access to the Internet numerous times this year.
2: Sometimes. The government shut down domestic access to the Internet several times this year.
3: Rarely but there have been a few occasions throughout the year when the government shut down domestic access to Internet.

4: Never, or almost never. The government does not typically interfere with the domestic access to the Internet.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

2.3.44.6 Government social media alternatives (v2smgovsmalt)

Long tag: vdem_cy_v2smgovsmalt

Original tag: v2smgovsmalt

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How prevalent is the usage of social media platforms that are wholly controlled by either the government or its agents in this country?
RESPONSES:
0: Essentially all social media usage takes place on platforms controlled by the state.
1: Most usage of social media is on state-controlled platforms, although some groups use non-state-controlled alternatives.
2: There is significant usage of both state-controlled and non-state-controlled social media platforms.
3: While some state-controlled social media platforms exist, their usage only represents a small share of social media usage in the country.
4: Practically no one uses state-controlled social media platforms.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean

(2026)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How comprehensive is the surveillance of political content in social media by the government or its agents?
RESPONSES:
0: Extremely comprehensive. The government surveils virtually all content on social media.
1: Mostly comprehensive. The government surveils most content on social media, with comprehensive monitoring of most key political issues.
2: Somewhat comprehensive. The government does not universally surveil social media but can be expected to surveil key political issues about half the time.
3: Limited. The government only surveils political content on social media on a limited basis.
4: Not at all, or almost not at all. The government does not surveil political content on social media, with the exceptions mentioned in the clarifications section.
SCALE: Ordinal, converted to interval by the measurement model.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what degree does the government censor political content (i.e., deleting or filtering specific posts for political reasons) on social media in practice?
RESPONSES:
0: The government simply blocks all social media platforms.

1: The government successfully censors all social media with political content.
2: The government successfully censors a significant portion of political content on social media, though not all of it.
3: The government only censors social media with political content that deals with especially sensitive issues.
4: The government does not censor political social media content, with the exceptions mentioned in the clarifications section.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).
COUNTRY-YEAR AGGREGATION: Day-weighted mean
CITATION: **?**; Pemstein et al. 2.3.45 Digital Society Survey - State Internet Regulation Capacity and Approach

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded

surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.3.45.1 Internet legal regulation content (v2smregcon)

Long tag: vdem_cy_v2smregcon

QUESTION: What type of content is covered in the legal framework to regulate Internet?
RESPONSES:
0: The state can remove any content at will.
1: The state can remove most content, and the law protects speech in only specific, and politically uncontroversial contexts.
2: The legal framework is ambiguous. The state can remove some politically sensitive content, while other is protected by law.
3: The law protects most political speech, but the state can remove especially politically controversial content.
4: The law protects political speech, and the state can only remove content if it violates well-established legal criteria.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.

2.3.46 Digital Society Survey - Online Media Polarization

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the

New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

2.3.47 Digital Society Survey - Social Cleavages

The Digital Society Survey, designed by the Digital Society Project, contains questions pertaining to the political environment of the internet and social media. The data collected through expert-coded surveys provides information on topics related to coordinated information operations, digital media freedom, online media polarization, social cleavages as well as state internet regulation capacity and approach.

Principal investigators for the Digital Society Project are Valeriya Mechkova, Daniel Pemstein, Brigitte Seim, Steven Wilson.

For more information, please visit `www.digitalsocietyproject.org`.

Instructions to the coders (as shown in the surveys)

Digital society: The following survey contains questions pertaining to the political environment of the Internet and social media. Please bear in mind the following definitions as you respond to questions on this survey:

The government and its agents include official government organs, such as bureaucracies, courts, intelligence services, and the military, but also unofficial agents, such as officially unaffiliated cyber-warfare operatives who perform services, even "off-book" work, on behalf of the government.

Major political parties include the group of political parties that hold a significant number of seats in national legislative body(-ies), or earn a significant number of votes in elections for the executive. When we ask you to consider "major political parties," you do not need to consider parties that run in elections but receive only a small minority of seats or votes, or those that receive no seats at all.

We define the Internet as all information that people access over public and private digital networks, worldwide. The Internet includes both publicly accessible digital spaces and private or gated information transmission platforms. The Internet does not include traditional media transmission mechanisms such as paper, television, traditional voice telephone, and radio.

Social media are a subset of Internet platforms that enable normal individuals to create and share content with networks of other people. Social media platforms are available to the public, although content on such networks may be shared privately within subgroups of users. Social media includes both publicly visible, or semi-public platforms, like Facebook, Flickr, Friendster, Google+, Instagram, Myspace, LinkedIn, Twitter, VKontakte, and Weibo and private social networking and messaging platforms like Signal, Slack, Snapchat, or WhatsApp.

Domestic online media is any media source originating in the country in question. For example, the New York Times' website is domestic online media in the United States, but not in India, even though it operates bureaus in India. Media includes any source reporting on current events or political issues, ranging from well-established brands to newsletters and websites run by an individual.

Cyber security threats include penetration of private digital networks, using means ranging from exploiting software vulnerabilities, password cracking, or social engineering (e.g., tricking individuals into revealing passwords or other information necessary to break into a digital system) to obtain information or disrupt an organization or individual's use of digital networks and tools. They also include unauthorized alterations of an individual or organization's digital presence, such as defacing websites and commandeering social media accounts. These threats range from unsophisticated (e.g., exploitation of failure to password protect private networks or use of common passwords by authorized users, and spear phishing) to moderate (e.g., embedding malicious code in emails or exploiting well-known software flaws that organizations have failed to patch), to sophisticated (e.g., exploiting unknown exploits in commonly used software or even embedding exploits into commercial systems unbeknownst to their creators).

Clarification: When we discuss shutting down online content, please consider instances where a website (or websites) have been taken entirely offline as well as instances where a website (or websites) have been slowed down or had access similarly intentionally inhibited, such that use of this website is challenging. In other words, both outright shutting down and more subtle measures that inhibit access should be considered when answering these questions.

Clarification: When we discuss "censorship" or "censoring" content online, we are not concerned with censorship of topics such as child pornography, highly classified information such as military or intelligence secrets, or defamatory speech, unless this sort of censorship is used as a pretext for censoring political information or opinions.

QUESTION: How would you characterize the differences of opinions on major political issues in this society?
CLARIFICATION: While plurality of views exists in all societies, we are interested in knowing the extent to which these differences in opinions result in major clashes of views and polarization or, alternatively, whether there is general agreement on the general direction this society should develop.
RESPONSES:
0: Serious polarization. There are serious differences in opinions in society on almost all key political issues, which result in major clashes of views.
1: Moderate polarization. There are differences in opinions in society on many key political issues, which result in moderate clashes of views.
2: Medium polarization. Differences in opinions are noticeable on about half of the key political issues, resulting in some clashes of views.
3: Limited polarization. There are differences in opinions on only a few key political issues, resulting in few clashes of views.
4: No polarization. There are differences in opinions but there is a general agreement on the direction for key political issues.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 9-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see V-Dem Methodology).

2.3.48.8 Deliberative democracy index ordinal (e_v2x_delibdem_3c)

Long tag: vdem_cy_e_v2x_delibdem_3c

Original tag: e_v2x_delibdem_3C

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
AVAILABLE VERSIONS: *_3C, *_4C, *_5C
QUESTION: To what extent is the ideal of deliberative democracy achieved?
CLARIFICATION: These are ordinalized versions of the V-Dem deliberative democracy index. The original index ranges from 0 to 1. These transformations offer three different ordinal versions with three (_3C), four (_4C), and five (_5C) levels respectively.
For the _3C-version, one can interpret 0.0 as quot;Autocraticquot;, 0.5 as quot;Electoral Authoritarianquot;, and 1.0 as quot;Minimally Democraticquot;.
For the _4C-version, one can interpret 0.0 as Autocraticquot;, 0.33 as quot;Electoral Authoritarianquot;, 0.67 as quot;Minimally Democraticquot; and 1.0 as quot;Democraticquot;.
For the _5C-version, one can interpret 0.0 as quot;Closed Autocraticquot;, 0.25 as quot;Autocraticquot;, 0.5 as quot;Ambivalentquot;, 0.75 as quot;Minimally Democraticquot;, and 1.0 as quot;Democraticquot;.
SCALE: Ordinal.
SOURCE(S): v2xdl_delib v2x_polyarchy
DATA RELEASE: 5-15.
AGGREGATION: Same transformation rule as for quot;v2x_libdem_3C/_4C/_5Cquot;.
CITATION: **?**; *V-Dem Codebook* (see suggested citation at the top of this document).
YEARS: 1900-2024

Original tag: e_democracy_breakdowns

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Miller et al. (2022)

Description:

VARIABLE TYPE: E
QUESTION: How many previous democratic breakdowns occurred?
RESPONSES:
Numeric.
SOURCE(S): Miller et al. (2022).
NOTES: This variable is taken from version 4 of the Boix-Miller-Rosato dataset. Last

update, January 2022.
DATA RELEASE: 5-16.
CITATION: Miller et al. (2022)
YEARS: 1800-2020

2.3.49.3 Omitted data (e_democracy_omitteddata)

Long tag: vdem_cy_e_democracy_omitteddata

Original tag: e_democracy_omitteddata

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Miller et al. (2022)

Description:

VARIABLE TYPE: E
QUESTION: Is the country a democracy?
CLARIFICATION: This is the same measure as democracy, except it records an quot;NAquot; for countries occupied during an international war (*e.g.*, the Netherlands 1940-44) or experiencing state collapse during a civil war (*e.g.*, Lebanon 1976-89). The democracy variable instead fills in these years as continuations of the same regime type.
RESPONSES:
0: No
1: Yes
2: NA
SOURCE(S): Miller et al. (2022).
NOTES: This variable is taken from version 4 of the Boix-Miller-Rosato dataset. Last update, January 2022.
DATA RELEASE: 5-16.
CITATION: Miller et al. (2022)
YEARS: 1800-2020

2.3.51 Other Democracy Indices and Indicators - Lexical Index of Electoral Democracy

This section lists other indicators on democracy, that may help in evaluating the causes and effects of democracy or which may provide convergent validity tests for V-Dem data, divided into sections based on source.

2.3.51.1 Lexical index (e_lexical_index)

Long tag: vdem_cy_e_lexical_index

Original tag: e_lexical_index

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox,

Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Skaaning (2025)

Description:

VARIABLE TYPE: E
QUESTION: What is the lexical index of democracy in the country?
RESPONSES:
0: No elections
1: No party or one-party elections
2: Multi-party elections for legislature
3: Multi-party elections for legislature and executive
4: Minimally competitive elections
5: Male or female suffrage
6: Universal suffrage
SOURCE(S): Skaaning (2025).
DATA RELEASE: 5-16.
CITATION: Skaaning (2025).
YEARS: 1789-2024

2.3.52 Other Democracy Indices and Indicators - Unified Democracy Score

This section lists other indicators on democracy, that may help in evaluating the causes and effects of democracy or which may provide convergent validity tests for V-Dem data, divided into sections based on source.

2.3.52.1 Unified democracy score posterior (median) (e_uds_median)

Long tag: vdem_cy_e_uds_median

Original tag: e_uds_median

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: E
ADDITIONAL VERSIONS: *_mean, *_pct025, *_pct975
CLARIFICATION: The posterior median of the Unified democracy score.
SOURCE(S): **?**.
NOTES: The dataset also contains posterior mean as well as 2,5 and 97,5 posterior percentile.
DATA RELEASE: 5-15.
CITATION: **?**.
YEARS: 1946-2012

2.3.53 Other Democracy Indices and Indicators - Political Institutions and Political Events

This section lists other indicators on democracy, that may help in evaluating the causes and effects of democracy or which may provide convergent validity tests for V-Dem data, divided into sections

based on source.

2.3.53.1 Coups (Przeworski et al.) (e_coups)

Long tag: vdem_cy_e_coups

Original tag: e_coups

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Przeworski et al. (2013)

Description:

VARIABLE TYPE: E

CLARIFICATION: Number of successful coups d'état during a given year. A coup is any event resulting in an irregular removal or resignation of the chief executive that involves a violent action or an explicit threat of resorting to it, by an armed organization. Assassinations of the chief executive are not considered coups unless the group responsible for the action takes over the office. Whenever the rules about the replacement of the chief executive are either not codified or unclear, the force criterion prevails. The definition excludes resignations under pressure of popular mobilization if no armed group (legal or not) is involved (resignation of Carlos Mesa in Bolivia). Similarly, irregular transfers of power among civilians that do not entail force (such as changes of communist leaders) are not considered coups. We place no restriction on whether the armed group causing the replacement is domestic or foreign, nor on the identity of the incoming ruler. In particular, any military intervention of foreign powers producing a replacement of the chief executive is coded as a coup, even if they restore a previously elected ruler (French troops overthrowing Bokassa in Central African Republic). As a general rule, any replacement of a military chief executive by another military man is considered a coup, unless the succession occurred according to pre-established rules (Figueirido replacing Geisel in Brazil). Specifically, resignations of the military chief executive caused by votes of non-confidence of irregular military bodies are considered coups (Galtieri replacing Viola in Argentina). The variable is compatible to other conventional sources such as Powell and Thyne (2011), Marshall and Marshall (2009), and Svolik and Akcinaroglu (2010) for the period 1950. 2008, with some difference in the interpretation of specific events. Information for the pre–1950 era is more scarce and therefore the coding may be less reliable.

SOURCE(S): Przeworski et al. (2013).

NOTES: Where there is more than one observation per country–year, the maximum of the variable for this period is taken.

DATA RELEASE: 5-16.

CITATION: Przeworski et al. (2013).

YEARS: 1789-2008

2.3.53.2 Parties in legislature (e_legparty)

Long tag: vdem_cy_e_legparty

Original tag: e_legparty

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt,

McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Przeworski et al. (2013)

Description:

VARIABLE TYPE: E
CLARIFICATION: Number of parties in the legislature. By quot;partyquot; we take here any recognizable, named grouping, regardless whether and how they appeared in elections. This variable is coded regardless whether the legislature was elected or appointed.
RESPONSES:
-1: if no legislature.
0: if none (including cases where parties are officially banned).
1: if one (including cases where other parties are officially banned).
2: if more.
SCALE: Nominal.
SOURCE(S): Przeworski et al. (2013).
NOTES: During the early period candidates typically competed in elections on an individual basis, without any kind of centralized party organizations or shared programs. Within legislatures, however, they often coalesced into groups, currents, factions, "sentiments," etc. Hence, subjective judgments are inevitable in coding this variable. Our rule of thumb was to code as parties any kind of groups that bare a label that survived over two consecutive legislatures. This was true in several countries of "Liberals" and "Conservatives." In other countries, notably France between 1815 and 1848, however, the divisive issues, the parliamentary groups, and their labels changed frequently, and such cases are coded as "none." A legislature consisting of one party and independents is coded as one party. When there is more than one observation per country–year, the one which has higher value is taken.
DATA RELEASE: 5-16.
CITATION: Przeworski et al. (2013).
YEARS: 1789-2008

2.3.54 Other Democracy Indices and Indicators - Polity5

This section lists other indicators on democracy, that may help in evaluating the causes and effects of democracy or which may provide convergent validity tests for V-Dem data, divided into sections based on source.

2.3.54.1 Institutionalized autocracy (e_autoc)

Long tag: vdem_cy_e_autoc

Original tag: e_autoc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Marshall & Gurr (2020)

Description:

VARIABLE TYPE: E
QUESTION: Is the polity an institutionalized autocracy?
CLARIFICATION: Autocracy is defined operationally in terms of the presence of a distinctive set of political characteristics. In mature form, autocracies sharply restrict or suppress competitive political participation. Their chief executives are chosen in a regularized

process of selection within the political elite, and once in office they exercise power with few institutional constraints.
RESPONSES:
Numeric.
SOURCE(S): Marshall & Gurr (2020).
NOTES: This variable is rescaled between 0 and 1 for comparison with V-Dem democracy indices for the online visualisation tools on the website. Standarized authority codes (i.e. -66, -77, -88) are set to missing for the online graphs.
DATA RELEASE: 5-16.
CITATION: Marshall & Gurr (2020).
YEARS: 1789-2018

2.3.54.2 Institutionalized democracy (e_democ)

Long tag: vdem_cy_e_democ

Original tag: e_democ

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Marshall & Gurr (2020)

Description:
VARIABLE TYPE: E
QUESTION: Is the polity an institutionalized democracy?
CLARIFICATION: Democracy is conceived as three essential, interdependent elements. One is the presence of institutions and procedures through which citizens can express effective preferences about alternative policies and leaders. Second is the existence of institutionalized constraints on the exercise of power by the executive. Third is the guarantee of civil liberties to all citizens in their daily lives and in acts of political participation.
The Democracy indicator is an additive eleven-point scale (0-10). The operational indicator of democracy is derived from codings of the competitiveness of political participation (PARCOMP), the openness and competitiveness of executive recruitment (XROPEN and XRCOMP), and constraints on the chief executive (XCONST).
RESPONSES:
Numeric.
SOURCE(S): Marshall & Gurr (2020).
NOTES: This variable is rescaled between 0 and 1 for comparison with V-Dem democracy indices for the online visualisation tools on the website. Standarized authority codes (i.e. -66, -77, -88) are set to missing for the online graphs.
DATA RELEASE: 5-16.
CITATION: Marshall & Gurr (2020).
YEARS: 1789-2018

2.3.54.3 Polity combined score (e_p_polity)

Long tag: vdem_cy_e_p_polity

Original tag: e_p_polity

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge,

Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Marshall & Gurr (2020)

Description:

VARIABLE TYPE: E
QUESTION: What is the Polity score?
CLARIFICATION: The Polity score is computed by subtracting the autocracy score from the democracy score. The resulting unified POLITY scale ranges from +10 (strongly democratic) to -10 (strongly autocratic).
RESPONSES:
Numeric.
SOURCE(S): Marshall & Gurr (2020).
NOTES: Standarized authority codes (i.e. -66, -77, -88) are set to missing for the online graphs.
DATA RELEASE: 5-16.
CITATION: Marshall & Gurr (2020).
YEARS: 1789-2018

2.3.54.4 Political competition (e_polcomp)

Long tag: vdem_cy_e_polcomp

Original tag: e_polcomp

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Marshall & Gurr (2020)

Description:

VARIABLE TYPE: E
QUESTION: Is there any (institutionalized) political competition?
CLARIFICATION: This variable combines information presented in two component variables: the degree of institutionalization, or regulation, of political competition (e_parreg) and the extent of government restriction on political competition (e_parcomp).
RESPONSES:
1: Repressed Competition: While no significant political activity is permitted outside the ranks of the hegemonic regime, nevertheless, some organized political participation occurs within the regime through highly circumscribed institutional channels.
2: Restricted Competition: Some organized political activity occurs outside the ranks of the hegemonic regime, but the regime systematically limits its form, extent, or both in ways that exclude substantial groups from participating in the political arena and/or suppresses the contestation of rival political interests.
3: Authoritarian-guided liberalization of repressed or restricted competition or the deepening of hegemonic control: Used to indicate either the concerted effort on the part of hegemonic regimes to open up their political systems to limited (and typically factional) political competition or the transformation of factional-based quot;quasi-democraciesquot; or quot;weak authoritarian regimesquot; into more repressive hegemonic systems in which political competition is increasingly institutionalized and restricted.
4: Uninstitutionalized Competition: Political participation is decentralized and fluid in

character — revolving around personalities, regional interests, and religious/ethnic/clan groups. There are no enduring national political organizations and systematic regime control of political activity is limited, that is, a situation characterized by a coincidence of weak state and weak society. In the contemporary context, uninstitutionalized competition is most likely to occur in resource poor countries and/or following the collapse of central authority under a (former) repressive, authoritarian state.
5: Gradual transition from uninstitutionalized (unregulated) competition to more regulated forms of political competition (the increasing regulation of competition may be centrally-guided or decentralized through the gradual development of political parties and interest groups).
6: Factional/Restricted Competition: Polities that oscillate more or less regularly between intense factionalism and faction-based restrictions: that is, when one faction secures power it uses that power to promote its exclusive interests and favor group members while restricting the political access and activities of other, excluded groups, until it is displaced in turn.
7: Factional Competition: There are relatively stable and enduring political groups which compete for political influence at the national level — parties, regional groups, or ethnic groups — but particularistic/parochial agendas tend to be exclusive and uncompromising with limited social integration or accommodation across identity boundaries. Factional competition is distinguished by a relative balance of group capabilities that prevents any one of the groups from capturing state power and imposing restrictions on other groups.
8: Political liberalization or democratic retrenchment: persistent over coercion: relatively coercive/restrictive transitions either from factional/restricted competition to institutionalized competitive participation or from institutionalized competitive participation to factional/restricted competition. In either case, this code reflects the unconsolidated nature of liberal political participation in otherwise procedurally democratic polities.
9: Political liberalization or democratic retrenchment: limited and/or decreasing overt coercion: This code is used to indicate relatively peaceful transitions either to or from institutionalized competitive participation. In either case, this code reflects the unconsolidated nature of liberal political participation in otherwise procedurally open electoral polities.
10: Institutionalized open electoral participation: Relatively stable and enduring political groups regularly compete for political influence with little use of coercion. No significant or substantial groups, issues, or types of conventional political action are regularly excluded from the political process.
SOURCE(S): Marshall & Gurr (2020).
NOTES: Standarized authority codes (i.e. -66, -77, -88) are set to missing for the online graphs.
DATA RELEASE: 5-16.
CITATION: Marshall & Gurr (2020).
YEARS: 1789-2018

2.3.55 Other Democracy Indices and Indicators - Others

This section lists other indicators on democracy, that may help in evaluating the causes and effects of democracy or which may provide convergent validity tests for V-Dem data, divided into sections based on source.

2.3.55.1 Democratic breakdown (Bernhard et al.) (e_bnr_dem)

Long tag: vdem_cy_e_bnr_dem

Original tag: e_bnr_dem

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt,

McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Bernhard et al. (2001), Teorell et al. (2024)

Description:

VARIABLE TYPE: E
CLARIFICATION: Countries that meet the minimum conditions for democracy (see below) enter the dataset and are coded quot;0.quot; When countries cease to meet those minimum criteria they are coded quot;1quot; and exit from the dataset.
SCALE: Dichotomous.
SOURCE(S): Bernhard et al. (2001). Taken from **?**
NOTES: If, after a democratic breakdown, a country again meets our minimum criteria it re-enters the data as a new democratic episode. The time frame onset in 1913 is a function of when the first country (Norway) meets the minimum conditions. All series terminate in either in a breakdown in various years or right censorship in 2005. The minimal conditions are based on Dahl's notion of polyarchy (competitiveness, inclusiveness) combined with Linz and Stepan's stateness criteria. Competitiveness: Like Przeworski *et al.* we include countries that hold elections for both the executive and legislature, and in which more than one party contests the elections. However, we exclude cases in which we detected outcome changing vote fraud, in which there was either extensive or extreme violence that inhibited voters' preference expression, or in which political parties representing a substantial portion of the population were banned. Inclusiveness: We only include competitive polities in which at least fifty percent of all adult citizens are enfranchised to vote in our set of democracies. Stateness: We also considered questions of sovereignty, not including colonial states, where founding elections were held prior to the granting of independence, and countries experiencing internal wars in which twenty percent or greater of the population or territory was out of control of the state.
DATA RELEASE: 5-16.
CITATION: Bernhard et al. (2001).
YEARS: 1946-2005

2.3.55.2 Democracy (e_chga_demo)

Long tag: vdem_cy_e_chga_demo

Original tag: e_chga_demo

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Cheibub et al. (2010)

Description:

VARIABLE TYPE: E
CLARIFICATION: A regime is considered a democracy if the executive and the legislature is directly or indirectly elected by popular vote, multiple parties are allowed, there is *de facto* existence of multiple parties outside of regime front, there are multiple parties within the legislature, and there has been no consolidation of incumbent advantage (*e.g.* unconstitutional closing of the lower house or extension of incumbent's term by postponing of subsequent elections). Transition years are coded as the regime that emerges in that year.
RESPONSES:
1: Democracy.
0: Otherwise.

SCALE: Dichotomous.
SOURCE(S): Cheibub et al. (2010).
DATA RELEASE: 5-16.
CITATION: Cheibub et al. (2010).
YEARS: 1946-2008

2.3.56 Background Factors (E) - Education

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.56.1 Education 15+ (e_peaveduc)

Long tag: vdem_cy_e_peaveduc

Original tag: e_peaveduc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Clio-Infra (2018*a*), along with other sources listed above, United States Census Bureau (2025)

Description:
VARIABLE TYPE: E
QUESTION: What is the average years of education among citizens older than 15?
CLARIFICATION: The Average years of education in the total population aged 15 years and older.
SOURCE(S): Clio-Infra (2018*b*) drawing on **?**; **?**; **?**; United States Census Bureau (2025); **?**; **?**; **?**; **?**; **?**; **?**.
NOTES: Missing data within a time–series is interpolated using linear interpolation for each country. In addition to this, from the last recorded data point to nowadays the data is extrapolated.
DATA RELEASE: 2-16.
CITATION: Clio-Infra (2018*b*).
YEARS: 1820-2010

2.3.56.2 Educational inequality, Gini (e_peedgini)

Long tag: vdem_cy_e_peedgini

Original tag: e_peedgini

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Clio-Infra (2018*a*), along with other sources listed above, United States Census Bureau (2025)

Description:

VARIABLE TYPE: E
QUESTION: How unequal is the level of education achieved by the population aged 15 years and older?
CLARIFICATION: Gini coefficient of educational inequality estimated from average education data using the method as suggested by Thomas, Wang, and Fan (2000), Checchi (2004) and Castelló and Doménech (2002: 4). Van Leeuwen, van Leeuwen-Li, and Foldvari (N.d.) provide a more detailed explanation in the Clio-Infra codebook.
SOURCE(S): Clio-Infra (2018*b*) drawing on **?**; **?**; **?**; United States Census Bureau (2025); **?**; **?**; **?**; **?**; **?**; **?**.
DATA RELEASE: 5-16.
CITATION: Clio-Infra (2018*b*).
YEARS: 1850-2010

2.3.57 Background Factors (E) - Geography

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.57.1 Land area (e_area)

Long tag: vdem_cy_e_area

Original tag: e_area

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Schvitz et al. (2021)

Description:

VARIABLE TYPE: E
QUESTION: What is the land area of a country?
CLARIFICATION: Country land area in square kilometers.
SOURCE(S): Haber & Menaldo (2011); Schvitz et al. (2021).
NOTES: Uses v2.0 of R package cshapes; Where several values were available per country–year, the latest one was chosen for the dataset. If both sources procide a value for a country-year, the one from cshapes are used.
DATA RELEASE: 5-16.
CITATION: Schvitz et al. (2021).
YEARS: 1886-2019

2.3.57.2 Region (geographic) (e_regiongeo)

Long tag: vdem_cy_e_regiongeo

Original tag: e_regiongeo

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim,

Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: United Nations Statistics Division (2013)

Description:

VARIABLE TYPE: E
QUESTION: In which geographic region is this country located?
CLARIFICATION: Regions are described based on geographic location.
RESPONSES:
1: Western Europe
2: Northern Europe
3: Southern Europe
4: Eastern Europe
5: Northern Africa
6: Western Africa
7: Middle Africa
8: Eastern Africa
9: Southern Africa
10: Western Asia
11: Central Asia
12: Eastern Asia
13: South-Eastern Asia
14: Southern Asia
15: Oceania (including Australia and the Pacific)
16: North America
17: Central America
18: South America
19: Caribbean (including Cuba, Haiti, Dominican Republic and Guyana)
SOURCE(S): United Nations Statistics Division (2013).
NOTES: For the countries coded only in the historical project or for which the UN does not have the code, the region is coded by V-Dem Data Manager in accordance with the position of the neighboring countries.
DATA RELEASE: 5-16.
CITATION: United Nations Statistics Division (2013).
YEARS: 1789-2025

2.3.57.3 Region (politico-geographic 7-category) (e_regionpol_7c)

Long tag: vdem_cy_e_regionpol_7c

Original tag: e_regionpol_7C

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: E
QUESTION: In which politico-geographic region is this country located?
CLARIFICATION: Regions are described as politico-geographic in the sense that they are based on geographical proximity as well as characteristics that contribute to regional understanding as identified by scholars in studies of democratization (e.g. post-Communist). This is a modification of *e_regionpol* above.
RESPONSES:

1: Eastern Europe (including German Democratic Republic, including the Caucasus)
2: Latin America and the Caribbean
3: The Middle East and North Africa (including Israel and Türkiye, excluding Cyprus)
4: Sub-Saharan Africa
5: Western Europe and North America (including Cyprus, but excluding German Democratic Republic)
6: East Asia and the Pacific (including Australia and New Zealand)
7: South and Central Asia
SOURCE(S): Teorell et al. (2024). This is a modification of e_regionpol above.
NOTES: The values are filled backwards to the first year of coding.
DATA RELEASE: 14-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1789-2025

2.3.57.4 Region (politico-geographic 6-category) (E) (e_regionpol_6c)

Long tag: vdem_cy_e_regionpol_6c

Original tag: e_regionpol_6C

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: E
QUESTION: In which politico-geographic region is this country located?
CLARIFICATION: Regions are described as politico-geographic in the sense that they are based on geographical proximity as well as characteristics that contribute to regional understanding as identified by scholars in studies of democratization (e.g. post-Communist). This is a modification of *e_regionpol* above.
RESPONSES:
1: Eastern Europe and Central Asia (including Mongolia and German Democratic Republic)
2: Latin America and the Caribbean
3: The Middle East and North Africa (including Israel and Türkiye, excluding Cyprus)
4: Sub-Saharan Africa
5: Western Europe and North America (including Cyprus, Australia and New Zealand, but excluding German Democratic Republic)
6: Asia and Pacific (excluding Australia and New Zealand; see 5)
SOURCE(S): Teorell et al. (2024). This is a modification of e_regionpol above.
NOTES: The values are filled backwards to the first year of coding.
DATA RELEASE: 9-16.
CITATION: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1789-2025

2.3.58 Background Factors (E) - Economics

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.58.1 Exports (e_cow_exports)

Long tag: vdem_cy_e_cow_exports

Original tag: e_cow_exports

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Barbieri et al. (2009), Barbieri & Keshk (2016)

Description:

VARIABLE TYPE: E
QUESTION: What is the total value of a country's exports?
CLARIFICATION: Total exports in 2014 US millions of dollars.
SOURCE(S): Barbieri et al. (2009); Barbieri & Keshk (2016).
DATA RELEASE: 5-16.
CITATION: Barbieri et al. (2009); Barbieri & Keshk (2016).
YEARS: 1870-2014

2.3.58.2 Imports (e_cow_imports)

Long tag: vdem_cy_e_cow_imports

Original tag: e_cow_imports

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Barbieri et al. (2009), Barbieri & Keshk (2016)

Description:

VARIABLE TYPE: E
QUESTION: What is the total value of a country's imports?
CLARIFICATION: Total imports in 2014 US millions of dollars.
SOURCE(S): Barbieri et al. (2009); Barbieri & Keshk (2016).
DATA RELEASE: 5-16.
CITATION: Barbieri et al. (2009); Barbieri & Keshk (2016).
YEARS: 1870-2014

2.3.58.3 GDP (e_gdp)

Long tag: vdem_cy_e_gdp

Original tag: e_gdp

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Fariss et al. (2021)

Description:

VARIABLE TYPE: E
ADDITIONAL VERSIONS: *_sd
CLARIFICATION: Point estimate from latent variable model of Gross Domestic Product based on a number of sources. For details, see the citation.
SOURCE(S): Fariss et al. (2021).
DATA RELEASE: 12-16.
CITATION: Fariss et al. (2021).
YEARS: 1789-2019

2.3.58.4 GDP per capita (e_gdppc)

Long tag: vdem_cy_e_gdppc

Original tag: e_gdppc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Fariss et al. (2021)

Description:

VARIABLE TYPE: E
ADDITIONAL VERSIONS: *_sd
CLARIFICATION: Point estimate from latent variable model of Gross Domestic Product Per Capita based on a number of sources. For details, see the citation.
SOURCE(S): Fariss et al. (2021).
DATA RELEASE: 12-16.
CITATION: Fariss et al. (2021).
YEARS: 1789-2019

2.3.58.5 Inflation (e_miinflat)

Long tag: vdem_cy_e_miinflat

Original tag: e_miinflat

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim,

Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Clio-Infra (2018*a*)

Description:

VARIABLE TYPE: E
QUESTION: What is the annual inflation rate?
SOURCE(S): Clio-Infra (2018*b*), based on **?**; **?**; **?**; **?**; **?**; **?**; **?**; **?**.
NOTES: Missing data within a time–series is interpolated using linear interpolation.
DATA RELEASE: 5-16.
CITATION: Clio-Infra (2018*b*).
YEARS: 1789-2010

2.3.58.6 Population (Fariss et al.) (e_pop)

Long tag: vdem_cy_e_pop

Original tag: e_pop

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Fariss et al. (2021)

Description:

VARIABLE TYPE: E
ADDITIONAL VERSIONS: *_sd
CLARIFICATION: Point estimate from latent variable model of Population based on a number of sources. For details, see the citation.
SOURCE(S): Fariss et al. (2021).
DATA RELEASE: 12-16.
CITATION: Fariss et al. (2021).
YEARS: 1789-2019

2.3.59 Background Factors (E) - Natural Resource Wealth

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.59.1 Petroleum, coal, and natural gas production per capita (e_total_fuel_income_pc)

Long tag: vdem_cy_e_total_fuel_income_pc

Original tag: e_total_fuel_income_pc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Haber & Menaldo (2011)

Description:

VARIABLE TYPE: E
QUESTION: What is the real value of a country's petroleum, coal, and natural gas production?
CLARIFICATION: Real value of petroleum, coal, and natural gas produced per capita.
SOURCE(S): Haber & Menaldo (2011).
DATA RELEASE: 5-16.
CITATION: Haber & Menaldo (2011).
YEARS: 1900-2006

2.3.59.2 Petroleum production per capita (e_total_oil_income_pc)

Long tag: vdem_cy_e_total_oil_income_pc

Original tag: e_total_oil_income_pc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Haber & Menaldo (2011)

Description:

VARIABLE TYPE: E
QUESTION: What is the real value of a country's petroleum production?
CLARIFICATION: Real value of petroleum produced per capita.
SOURCE(S): Haber & Menaldo (2011).
DATA RELEASE: 5-16.
CITATION: Haber & Menaldo (2011).
YEARS: 1800-2006

2.3.59.3 Petroleum, coal, natural gas, and metals production per capita (e_total_resources_income_pc)

Long tag: vdem_cy_e_total_resources_income_pc

Original tag: e_total_resources_income_pc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Haber & Menaldo (2011)

Description:

VARIABLE TYPE: E
QUESTION: What is the real value of a country's petroleum, coal, natural gas, and metals production?
CLARIFICATION: Real value of petroleum, coal, natural gas, and metals produced per capita.

SOURCE(S): Haber & Menaldo (2011).
DATA RELEASE: 5-16.
CITATION: Haber & Menaldo (2011).
YEARS: 1900-2006

2.3.60 Background Factors (E) - Infrastructure

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.60.1 Radios (e_radio_n)

Long tag: vdem_cy_e_radio_n

Original tag: e_radio_n

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Comin & Hobijn (2009)

Description:
VARIABLE TYPE: E
QUESTION: What is the number of radio sets?
CLARIFICATION: Original source doesn't specify if the indicators considers total number of radio sets or only radio sets in use.
SOURCE(S): Comin & Hobijn (2009).
DATA RELEASE: 5-16.
CITATION: Comin & Hobijn (2009).
YEARS: 1815-2000

2.3.61 Background Factors (E) - Demography

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.61.1 Fertility rate (e_miferrat)

Long tag: vdem_cy_e_miferrat

Original tag: e_miferrat

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Gapminder (2026)

Description:
VARIABLE TYPE: E

QUESTION: What is the fertility rate?
CLARIFICATION: The fertility rate (*i.e.* total fertility rate, period total fertility rate, total period fertility rate) of a population is the mean number of children that would be born to a woman over her lifetime if (a) she were to experience the current age-specific fertility rates through her lifetime, and (b) she were to survive through the end of her reproductive life. It is obtained by adding single-year age-specific rates at a given time.
SOURCE(S): **?** via Gapminder (2026).
DATA RELEASE: 2-16.
CITATION: Gapminder (2026).
YEARS: 1800-2025

2.3.61.2 Population total (Clio Infra, in thousands) (e_mipopula)

Long tag: vdem_cy_e_mipopula

Original tag: e_mipopula

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Clio-Infra (2018*a*)

Description:
VARIABLE TYPE: E
QUESTION: What is the total population (in thousands)?
SOURCE(S): Clio-Infra (2018*b*); **?**; **?**.
NOTES: Missing data within a time–series is interpolated using linear interpolation.
DATA RELEASE: 2-16.
CITATION: Clio-Infra (2018*b*).
YEARS: 1800-2000

2.3.61.3 Urbanization (e_miurbani)

Long tag: vdem_cy_e_miurbani

Original tag: e_miurbani

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

2.3.61.8 Maternal mortality rate (e_pematmor)

Long tag: vdem_cy_e_pematmor

Original tag: e_pematmor

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Gapminder (2026)

Description:
VARIABLE TYPE: E
QUESTION: What is the maternal mortality rate?
CLARIFICATION: The number of maternal deaths divided by the number of live births in a given year, multiplied by 100000. Maternal death is defined as the death of a woman while pregnant or within 42 days after the termination of that pregnancy, regardless of the length and site of the pregnancy, from a cause related to or aggravated by the pregnancy.
SOURCE(S): **?** via Gapminder (2026).
DATA RELEASE: 5-16.
CITATION: Gapminder (2026).
YEARS: 1800-2013

2.3.62 Background Factors (E) - Conflict

This section lists variables gathered from other sources that may help in evaluating the causes and effects of democracy. The variables are divided into sections based on theme.

2.3.62.1 Civil war (e_civil_war)

Long tag: vdem_cy_e_civil_war

Original tag: e_civil_war

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Haber & Menaldo (2011)

Description:
VARIABLE TYPE: E
QUESTION: Was there a civil war?
CLARIFICATION: Civil war — at least one intra-state war with at least 1,000 battle deaths for each country-year.
RESPONSES:
0: No

1: Yes
SOURCE(S): Haber & Menaldo (2011).
DATA RELEASE: 5-16.
CITATION: Haber & Menaldo (2011).
YEARS: 1816-2006

2.3.62.2 Armed conflict, international (e_miinteco)

Long tag: vdem_cy_e_miinteco

Original tag: e_miinteco

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Brecke (2001)

Description:
VARIABLE TYPE: E
QUESTION: Did the country participate in an international armed conflict?
CLARIFICATION: Coded 1 if the country participated in an international armed conflict in a given year, 0 otherwise. The original source codebook (Brecke 2001) states that no war is coded as 0 and war is coded as 1. However, the data contains only 1's along with missing data (no 0's). Following the authors' instructions (personal communication), we re-code missing observations as non-conflict (0) for countries where at least one year in the original times series (which runs from 1500 until present) was coded as 1.
SOURCE(S): Clio-Infra (2018*b*), drawing on Brecke (2001).
DATA RELEASE: 5-16.
CITATION: Brecke (2001).
YEARS: 1789-2000

2.3.62.3 Armed conflict, internal (e_miinterc)

Long tag: vdem_cy_e_miinterc

Original tag: e_miinterc

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Brecke (2001)

Description:
VARIABLE TYPE: E
QUESTION: Did the country experience an internal armed conflict?
CLARIFICATION: Coded 1 if the country suffered in an internal armed conflict in a given year, 0 otherwise. The original source codebook (Brecke 2001) states that no war is coded as 0 and war is coded as 1. However, the data contains only 1's along with missing data (no 0's). Following the authors' instructions (personal communication), we re-code missing

observations as non-conflict (0) for countries where at least one year in the original times series (which runs from 1500 until present) was coded as 1.
SOURCE(S): Clio-Infra (2018*b*), drawing on Brecke (2001).
DATA RELEASE: 5-16.
CITATION: Brecke (2001).
YEARS: 1789-2000

2.3.62.4 Coups d'etat (Powell and Thyne) (e_pt_coup)

Long tag: vdem_cy_e_pt_coup

Original tag: e_pt_coup

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Powell & Thyne (2011)

Description:
VARIABLE TYPE: E
QUESTION: How many successful coup d'etat where recoreded in this year?
CLARIFICATION: According to the source, how many successful coup attempts where recorded in this year? The maximum count of this derived variable is four and its minimum is zero. Coups d'etat are defined as "overt attempts by the military or other elites within the state apparatus to unseat the sitting head of state using unconstitutional means (. . .) there is no minimal death threshold for defining a coup. A coup attempt is defined as successful if the coup perpetrators seize and hold power for at least seven days" (Powell
amp; Thyne 2011:252).
SCALE: Numeric
SOURCE(S): Powell & Thyne (2011).
NOTES: This variable is derived from the sourced dataset. For every country-year we sum the number of recorded successful coup attempts. The variable e_pt_coup_attempts sums the number of coup attempts.
DATA RELEASE: 9-16.
CITATION: Powell & Thyne (2011).
YEARS: 1950-2025

2.3.62.5 Number of coups attempts in a year (e_pt_coup_attempts)

Long tag: vdem_cy_e_pt_coup_attempts

Original tag: e_pt_coup_attempts

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Powell & Thyne (2011)

Description:

VARIABLE TYPE: E
QUESTION: How many coup attempts where recorded in this year?
CLARIFICATION: According to the source, how many coup attempts where recorded in this year? The maximum value of this derived variable is four and its minimum value is zero. Coups d'etat are defined as "overt attempts by the military or other elites within the state apparatus to unseat the sitting head of state using unconstitutional means (. . .) there is no minimal death threshold for defining a coup. A coup attempt is defined as successful if the coup perpetrators seize and hold power for at least seven days" (Powell
amp; Thyne 2011:252).
SCALE: Numeric
SOURCE(S): Powell & Thyne (2011).
NOTES: This variable is derived from the sourced dataset. For every country-year we sum the number of recorded coup attempts, successful or not. The variable e_pt_coup sums the number of successful coups.
DATA RELEASE: 13-16.
CITATION: Powell & Thyne (2011).
YEARS: 1950-2025

2.3.63 Varieties of Indoctrination

The Varieties of Indoctrination (V-Indoc) dataset is constructed based on an expert survey fielded in collaboration with V-Dem and led by the ERC-funded project "Democracy under Threat: How Education can Save it" (DEMED). The dataset contains indices and indicators that measure indoctrination efforts in education and the media across 160 countries from 1945 to 2021. The indices capture broad dimensions of indoctrination such as indoctrination potential and indoctrination content, while the indicators cover topics related to the curriculum, teachers, schools, and the media. The principal investigators are Anja Neundorf, Eugenia Nazrullaeva, Ksenia Northmore-Ball, Katerina Tertytchnaya, and Wooseok Kim. For more information, please visit `https://www.gla.ac.uk/research/az/democracyresearch/`.

2.3.63.1 Indoctrination potential in education (v2xed_ed_inpt)

Long tag: vdem_cy_v2xed_ed_inpt

Original tag: v2xed_ed_inpt

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Variable citation: Neundorf et al. (2023), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Pemstein et al. (2026)

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How strong is the potential for indoctrination in education?
CLARIFICATION: The potential of regimes to successfully indoctrinate through education is based on their control over the structures and processes of the education system. The index is a function of the coherence of the regime's doctrine (whether it be democratic or autocratic) and the effort devoted to political education. Greater coherence and political

education efforts are expected to generate higher potential for indoctrination.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xed_ed_poed v2xed_ed_inco
DATA RELEASE: 13-16.
AGGREGATION: We estimate the index by averaging two indices: v2xed_ed_poed and v2xed_ed_inco.
CITATION: Neundorf et al. (2023); Pemstein et al. (2026); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1945-2021

2.3.63.2 Political education effort in education (v2xed_ed_poed)

Long tag: vdem_cy_v2xed_ed_poed

Original tag: v2xed_ed_poed

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: How coherent are the means of indoctrination in education?
CLARIFICATION: This index measures the extent to which a coherent single doctrine of political values and model citizenship is known and promoted by educational agents. The index is a function of the centralization of the education system and the regime's control over educational agents. Greater centralization and control are expected to lead to a more coherent doctrine being taught through education.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xed_ed_cent v2xed_ed_ctag
DATA RELEASE: 13-16.
AGGREGATION: We estimate the index by averaging two indices: v2xed_ed_cent and v2xed_ed_ctag.

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_codelow, *_codehigh, *_sd
QUESTION: To what extent is the indoctrination content in education democratic (and not patriotic)?
CLARIFICATION: This index combines indicators from the democratic and patriotic indoctrination content indices in education (i.e., v2xed_ed_dmcon and v2xed_ed_ptcon). This index should be used if patriotic principles are considered to be at odds with democratic principles, i.e., higher values of the patriotic content indicators will be associated with lower values of this index. If democratic and patriotic indoctrination content are considered to be orthogonal, v2xed_ed_dmcon and v2xed_ed_ptcon should be used instead.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2edpoledrights v2edideolch_rec v2edcritical v2edplural v2edpatriot v2edscpatriotcb

QUESTION: How strong is state-control over agents in the media?
CLARIFICATION: This index measures the extent to which the regime is able to control various media agents.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2medstateprint v2medstatebroad v2medentrain v2meharjrn v2meslfcen
NOTES: This index combines variables from V-Dem and V-Indoc. The following variables are sourced from V-Dem: v2meharjrn and v2meslfcen. The scales of these variables have been reversed to accommodate the direction of the index.
DATA RELEASE: 13-16.
AGGREGATION: We estimate the index by taking the point estimates from a Bayesian factor analysis model of the indicators: v2medstateprint, v2medstatebroad, v2medentrain, v2meharjrn, and v2meslfcen.
CITATION: Neundorf et al. (2023); Pemstein et al. QUESTION: To what extent does a national authority set the official curriculum framework for schools?
CLARIFICATION: The official curriculum may only be a framework, to which individual schools can contribute.
For this question, we are interested in all school subjects across levels of primary and secondary public education. If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.
A national (or federal) authority can include a state body organized under the auspices of a Ministry of Education.
The sub-national level includes states, provinces, districts, municipalities, villages, local educational authorities, etc.
RESPONSES:
0: A national authority does not set the official curriculum framework, that is, the curriculum framework is completely set by sub-national authorities.
1: Sub-national authorities mostly set the official curriculum framework, with some input from the national authority.
2: A national authority mostly sets the official curriculum framework, with some input from sub-national authorities.
3: A national authority fully sets the official curriculum framework.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What proportion of school textbooks across core subjects does a national authority approve centrally?
CLARIFICATION: For this question, we are interested in core subjects, such as languages, mathematics, science, arts, social studies, history, geography. We are not interested in textbooks teaching foreign languages that could be subcontracted to a foreign publisher.
Please consider school subjects across levels of formal primary and secondary public education. If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.
Examples of ways in which textbook production is centrally approved or authorized include: a national public authority reviews textbook content and approves textbooks for use in schools; there is a state-mandated national list of textbooks that schools are recommended to use; the Ministry of Education directly publishes textbooks. A national (or federal) authority can include a public authority organized under the auspices of a Ministry of Education or a different authority.
RESPONSES:
0: No textbooks are centrally approved by a national authority.
1: Some textbooks are centrally approved by a national authority.
2: All textbooks are centrally approved by a national authority.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

Description:

VARIABLE TYPE: C
PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Are primary school students required to study at least one subject that predominately focuses on teaching political values?
CLARIFICATION: Examples of subjects that focus on teaching political values include specific subjects in political education, as well subjects where political values are integrated in the curriculum: for example, moral, religious, and civic education; ethics and civics; 'knowledge about society' with elements of sociology, politics, legal studies, or economics. This does not include history as a subject. We are not interested in *de jure* subject labels but in *de facto* subject content: a course does not need to be entitled "political values" to be considered here.
Political values refer to goals that are the desirable purposes for socio-political organizations such as the political community, the nation-state, and regime. Political values guide an individual's or group's general behavior/attitudes toward political 'objects' (e.g. leaders, events, ideologies).
RESPONSES:
0: No. There is no general requirement for the majority of primary school students to study at least one subject predominately focused on political values.
1: Yes. The majority of primary school students are required to study at least one subject that is predominately focused on political values.
SCALE: Binary, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: How often does the language curriculum promote patriotism?
CLARIFICATION: We are interested in the curriculum for core subjects in language studies, common to a majority of students, for example, teaching the official language(s) of the country. We are not interested in foreign languages.
By promoting patriotism, we mean encouraging feelings of love, pride, loyalty and commitment to one's country. For example, promoting patriotism can take the form of teaching narratives that celebrate the country's military past, national origin stories, the majority ethnic or religious group, or accomplishments in economic or technological sectors. Patriotic education could be part of the texts used to teach basic literacy skills (e.g. handwriting exercises), language textbooks, assigned readings in the literature curriculum, as well as in accompanying teaching manuals.

Please consider a typical situation for students in primary and secondary schools. If the situation varies across educational levels, please provide the response that is most accurate for the majority of students.
RESPONSES:
0: Rarely or never.
1: Sometimes.
2: Often.
3: Extensively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: How often does the history curriculum promote a specific societal model or ideology?
CLARIFICATION: A societal model or ideology is generally a codified set of beliefs used to justify a particular social and political order, for example, socialism, democracy, liberalism, fascism or social orders related to a specific religion.
The history curriculum can promote a specific ideology or societal model by often referring to it and clearly interpreting one model as better than other alternatives.
We are not just interested in *de jure* history subjects, but also in the *de facto* subject content.
Please consider a typical situation for students in primary and secondary schools. If the situation varies across educational levels, please provide the response that is most accurate for the majority of students.

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: When historical events are taught, to what extent are students exposed to diverse views and/or interpretations of these events?
CLARIFICATION: We are not interested in *de jure* history subjects but in the *de facto* subject content, that is, in history-related subjects or in subjects that are predominantly focused on teaching history.
We are interested in how much space is given to alternative viewpoints, such as alternative political ideologies, in the teaching of history. For example, if the major international conflict is taught, it can be studied exclusively from the perspective of the country's now-dominant power.
RESPONSES:
0: Rarely or never.
1: Sometimes.
2: Often.
3: Extensively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
CITATION: Neundorf et al. (2023); **?**; Pemstein et al. PROJECT MANAGER(S): Anja Neundorf
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do students have opportunities to discuss what they are taught in history classes?
CLARIFICATION: This question regards the degree to which students are *de facto* given the opportunity to engage in debates which question the material and content of their history classes, as well as being able to voice disagreement with each other. Critical engagement with the content can be expressed by engaging in discussions with the teacher or other students, in oral presentations, or in written work (for example, exams and essays).
Opportunity means that critically engaging with the content would not bring down students' marks.
RESPONSES:
0: Students are never or rarely given the opportunity to discuss what they are taught.
1: Students are sometimes given the opportunity to discuss what they are taught.
2: Students are often given the opportunity to discuss what they are taught.
3: Students are extensively given the opportunity to discuss what they are taught.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr

QUESTION: Do history teachers have autonomy to deviate from the content of the official curriculum in the classroom?
CLARIFICATION: Here we aim to capture the degree to which teachers have autonomy to *de facto* deviate from the intended or official curriculum in their classes. Examples of how teachers can deviate from the content of the official curriculum: selecting textbooks that are different from those authorized or recommended by a central authority; diverging from the official curriculum in terms of the amount of time allocated to different topics, or supplement/expand on the official curriculum.
In cases where there is no official history curriculum, or the official history curriculum sets only loose restrictions on teachers' autonomy, please code this question as zero (generally autonomous).
RESPONSES:
0: They are free to deviate to a large extent: teachers are generally autonomous.
1: They are free to deviate to a moderate extent: teachers' autonomy is somewhat restricted.
2: They are free to deviate to a small extent: teachers' autonomy is mostly restricted.
3: They are not at all free to deviate: teachers' autonomy is completely restricted.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: What proportion of instructional weekly hours is dedicated to mathematics and natural sciences in primary education?
CLARIFICATION: For this question, please approximate the proportion of instructional hours across grades of primary education.
Mathematics includes arithmetic, geometry, algebra, calculus.
Natural sciences include chemistry, biology, physics, as well as classes in computing and engineering.

RESPONSES:
0: A small proportion (less than 25percent).
1: A large proportion (about 25percent or more).
SCALE: Binary, converted to interval by the measurement model.
NOTES: For the mode version of this variable, we assign an observation a value of 0.5 if the mode is not unique, i.e., a value of 0.5 represents a multimodal response distribution.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Out of the top four national print media with the highest readership, how many are state-owned?
CLARIFICATION: If there are fewer than four national print media, please provide your answer based on the number of existing national print media.
By print media, we refer to newspapers, magazines, or printed journals whose content can be consumed through their printed or online editions. In this question, we are only interested in state ownership of the media – not in the extent to which the state may control editorial decisions.
State ownership takes different forms. For example, state-owned media can be funded by government license fees and advertising. They can also be directly controlled by government agencies (e.g. the Ministry of Information and Culture). The state, the ruling party, or the Head of Government / the Head of State, can also be the owner of media in this context.
RESPONSES:
0: There are no state-owned print media outlets.
1: State-owned outlets make up a minority of print media outlets.
2: There is an equal share of state- and non-state owned print media outlets.
3: State-owned outlets make up the majority of print media outlets.
4: All print media outlets are state-owned.
ORDERING: If v2medstateprint and v2medstatebroad are both set to 0 do not answer v2medpolstate. If both are set to 4 do not answer v2medpolnonstate.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: This is a filtering question for v2medpolstate and v2medpolnonstate.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: For the print and broadcast media outlets owned by the state, how often do political authorities influence how these outlets cover political issues?
CLARIFICATION: Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers. Political authorities can influence which political issues state-media cover, how, and how much they cover them. For example, they can exert influence by directly or indirectly controlling the hiring and firing of producers, directors, writers, editors, and announcers; by manipulating the resources these media require; by withholding resources required for printing or broadcast. Political authorities can also directly dictate content and make editorial decisions.
RESPONSES:
0: Political authorities (almost) never influence the coverage of political issues.
1: Political authorities sometimes influence the coverage of political issues.
2: Political authorities often influence the coverage of political issues.
3: Political authorities almost always influence the coverage of political issues.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: Please answer this question only when both v2medstateprint and v2medstatebroad are not both 0.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: For the print and broadcast media outlets NOT owned by the state, how often do political authorities influence how these cover political issues?
CLARIFICATION: Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers. Political authorities can influence the coverage of non-state owned outlets both directly and indirectly. Indirect forms of control might include politically

motivated awarding of broadcast frequencies, withdrawal of financial support, influence over printing facilities (e.g. subsidized newsprint) and distribution networks, selected distribution of advertising, onerous registration requirements, and prohibitive tariffs. They might also include tax privileges, bribery, and cash payments. Indirect forms of control may also include the intimidation of owners, advertisers, and editors, through the use of threats and violence.
RESPONSES:
0: Political authorities (almost) never influence the coverage of key political issues.
1: Political authorities sometimes influence the coverage of key political issues.
2: Political authorities often influence the coverage of key political issues.
3: Political authorities almost always influence the coverage of key political issues.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: Please answer this question only when both v2medstateprint and v2medstatebroad are not both 4.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
CLEANING: Set to missing when v2medstateprint and v2medstatebroad are both 4.

QUESTION: How often do media outlets promote patriotism?
CLARIFICATION: Promotion of patriotism can be associated with promotion of patriotic consciousness, the love of the country, national pride, loyalty and commitment. For example, specific narratives can celebrate the country's military past, national origin stories, or accomplishments in economic or technological sectors. Patriotism can be promoted in news, movies, TV shows, radio shows, music, or magazines.
For this question, please consider all (state-owned as well as not state-owned) broadcast and print media outlets.
RESPONSES:
0: Rarely or never.
1: Sometimes.

2: Often.
3: Extensively.

QUESTION: Do political authorities have control over the production of entertainment content?
CLARIFICATION: Entertainment includes both broadcast and print content, such as movies, TV shows, radio shows, music, and magazines.
Here we distinguish between entertainment content and news content (although, in some cases news content can have an entertainment component, and vice versa), focusing on entertainment.
Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders, such as presidents, prime minister or ministers.
It is irrelevant how political authorities came to exert the control over the entertainment content.
RESPONSES:
0: Political authorities exert almost no control over the production of entertainment content.
1: Political authorities exert some control over the production of entertainment content.
2: Political authorities exert a high level of control over the production of entertainment content.
3: Political authorities almost exclusively control the production of entertainment content.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Are patriotic symbols displayed in schools?
CLARIFICATION: Examples of patriotic symbols include: the national flag, a picture or bust of current or past country leaders, singing the national anthem or reciting national pledges, and celebrations of national days, heroes, historical or military events (for example, victory in a war). It further includes symbols associated with the ruling party, royal family, military junta, or other group/entity representing the political regime (e.g., party logo, symbol for royal family, military symbol tied to the particular regime, symbol of specific ethnic group or class dominating the regime). Patriotic symbols include religious symbols if (and only if) religious and state authorities are closely interlinked.
Here we refer to the school building(s) and classrooms and not to the content of learning material, such as textbooks.
If there is significant variation in the use of patriotic symbols across the territory, the answer should reflect the average or typical school across the sub-national units.
RESPONSES:
0: Patriotic symbols are usually not displayed.
1: Patriotic symbols are displayed.
ORDERING: If answer is 0 in a given year, please skip v2edscpatriotcb for this year.
SCALE: Binary, converted to interval by the measurement model.
NOTES: This is a filtering question for v2edscpatriotcb. For the mode version of this variable, we assign an observation a value of 0.5 if the mode is not unique, i.e., a value of 0.5 represents a multimodal response distribution.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Do schools promote involvement in extracurricular civic and/or political activities?
CLARIFICATION: Extracurricular civic activities can include (but are not limited to): joining a political organization, a specific political party, the army, a civil society organization, a labor union, a grassroots activist organization, volunteering in the local community, leadership activities, school-community partnerships.
Schools can promote these activities by providing such opportunities (e.g. by having a school council), or encouraging pupils to get involved in these outside of school (e.g. by emphasizing the importance of volunteering).
RESPONSES:
0: Schools do not promote extracurricular civic and/or political activities.
1: Schools promote extracurricular civic and/or political activities to some extent, but these activities are not considered an integral part of education.
2: Schools promote extracurricular civic and/or political activities as an integral part of education.

QUESTION: What are the *de facto* education requirements to become a primary school teacher?
CLARIFICATION: If there is substantive variation at the sub-national or local levels, please consider the education requirements for the majority of primary school teachers in the country. Some countries may require a degree/diploma in education and others may accept a degree in any subject – indicate the completed education level required regardless of specialization. Please consider initial requirements to be a teacher not those for further professional development.
RESPONSES:

0: There are no educational requirements for aspiring teachers beyond proof of basic literacy and/or numeracy skills (ISCED Level 2 or lower).
1: Aspiring teachers must have completed a secondary school level education (ISCED Level 3).
2: Aspiring teachers must have achieved an education at the post-secondary, non-university level (for example, technical or vocational institutions) (ISCED Level 4).
3: Aspiring teachers must have completed at least one degree program taught at the university level (ISCED Level 5 and above).
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: In defining different education levels, we use the ISCED classification adopted by UNESCO, the International Standard Classification of Education (ISCED) 2011.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Is there a comprehensive monitoring system in place for public authorities to conduct external teacher inspection?
CLARIFICATION: This question concerns the formal monitoring efforts of the relevant public/government authorities (national / sub-national / local authorities / school district administration) to conduct external inspection of teachers, that is, it concerns the operations of a formal bureaucratic hierarchy outside of school that works to inspect teachers. We are not interested in peer review observations of teachers working in the same school. We are not interested in *de jure* formal procedures but whether they are *de facto* carried out in practice. Teacher inspection can include external inspectors conducting teaching observations inside the classroom or during a class, before a class (audits of teachers' lesson plans) or after a class (for example, audits of students' notebooks and teachers' assessment of students' schoolwork). We define a comprehensive inspection in the following way(s): inspections are regular, conducted according to standardized and transparent protocols, with impartial and objective judgements; inspection results are reported to relevant national or sub-national government

offices, etc.
If there are substantive differences between the primary and secondary education levels, please provide the response that is most accurate for the majority of schools.

RESPONSES:
0: There is no external teacher inspection.
1: While there is a system in place for external teacher inspection, it is not comprehensive.
2: There is a generally comprehensive system in place for external teacher inspection.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.

QUESTION: Do officially recognized teacher unions exist in this country?
CLARIFICATION: Please answer this question without taking into account the nature of the union. That is, for the purposes of this question it is irrelevant if the teacher union is distinct or part of a larger union (e.g. a trade union federation). This question does not concern why a teacher's union does or does not exist. It is irrelevant if a union does not exist because (teacher) unionization is formally prohibited, teacher unionization can be allowed *de jure* but prohibited *de facto* due to government pressure, or there can be a lack of organization capacity among teachers.
RESPONSES:
0: No officially recognized teacher unions exist.
1: Officially recognized teacher unions exist.
ORDERING: If answer is 0 in a given year, please skip v2edteunionindp for this year.
SCALE: Binary, converted to interval by the measurement model.
NOTES: This is a filtering question for v2edteunionindp. For the mode version of this variable, we assign an observation a value of 0.5 if the mode is not unique, i.e., a value of 0.5

represents a multimodal response distribution.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: Are officially recognized teacher unions independent from political authorities?
CLARIFICATION: Please answer this question regardless of the nature of teacher unions, that is, it is irrelevant if teacher unions are distinct or part of a comprehensive union (e.g. trade union federations). In cases where there is substantive sub-national variation, please consider teacher unions in the most populous sub-national units.
Political authorities can be national / sub-national / local public authorities and include ruling political parties and office holders such as presidents, prime minister or ministers.
This question does not distinguish between different mechanisms that can lead to teacher unions being dependent on the state. It is irrelevant if the relationship with the state was due to coercion, co-optation, or voluntary strategic alliances.
RESPONSES:
0: Teacher unions are fully independent.
1: Teacher unions are mostly independent.
2: Teacher unions are somewhat independent.
3: Teacher unions are not independent.
SCALE: Ordinal, converted to interval by the measurement model.
NOTES: Please answer this question only when option 1 was selected for v2edteunion.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).
CLEANING: Set to missing when v2edteunion is 0.

QUESTION: To what extent are hiring decisions for teachers based on their political views and/or political behavior and/or moral character?
CLARIFICATION: Please consider hiring decisions across all subjects.
This question concerns actual practice (*de facto*, not legislation pertaining to the recruitment procedures for teachers).
This question concerns hiring decisions based on political views, or statements, participation in political protests, or membership in political parties or other organizations on the part of hiring candidates. Note that these behaviors can result in either a) relevant candidates not being hired (for example, being denied a teaching job due to a party affiliation) and b) only specific candidates being hired (for example, being hired due to pro-regime ideological affinities, party membership or moral character). Note that sometimes "moral character" is used as a pretext for political hiring decisions. In such cases, treat this pretext as political.
Please consider the situation for both primary and secondary school teachers. If there are substantive differences between the primary and secondary education levels, please provide the response that applies to the majority of teachers.
RESPONSES:
0: Rarely or never.
1: Sometimes.
2: Often.
3: Almost exclusively.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

QUESTION: How likely is it that teachers would be fired if they were to publicly express political views that contradict the dominant political order?
CLARIFICATION: This question pertains to firings of teachers on the basis of their political views, statements or membership in parties or organizations. We are not interested in firings for reasons related to their performance or professional competencies.
Dominant political order: A country's political norms and key political institutions and authorities. We are not interested in the violations of predominant social, cultural and moral norms unless they are explicitly politicized.
Public expression of political views can happen at school or outside of school (for example, public tweets, participation in a protest).
RESPONSES:
0: Teachers would almost never be fired.
1: Teachers would sometimes be fired.
2: Teachers would likely be fired.
3: Teachers would almost certainly be fired.
SCALE: Ordinal, converted to interval by the measurement model.
DATA RELEASE: 13-16.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V-Dem Methodology*).

2.3.64 Party Systems

The following indices refer to a variety of latent positions that party systems have on several policy orientations and governance. The Party Systems indices are designed by aggregating individual parties' policy orientations in a given country-election-year using data from the Varieties of Party Identity and Organization (V-Party, v2) during the period between 1970-2019 for 178 countries. To find out more about this data and/or the component variables that underly these indicies, please visit `https://www.v-dem.net/data/v-party-dataset/`. The indices in this section have been developed by Fabio Angiolillo and Felix Wiebrecht. The following applies to all indices in this section:

- These indices are only computed for election-years, as identified by V-Party. They are not calculated for non-election years as the aggregation equation relies on political parties' institutional positions which can change across the legislature.
- The codehigh and codelow versions of the indices are derived by simply using the corresponding versions from each component. This propagates the uncertainty measurement from the component variables to the indices.
- All country-election-year components used for the party systems indices are weighted by the seat shares for each political party within a given party system (v2passeatshare). In the equations for each index, the weights are denoted by ws and are indexed by gp for government parties, op for opposition parties, and t for election-year. These components are weighted in order to adjust for the size of each party in influencing the party system.

2.3.64.1 Opposition Parties' Democracy Index (v2xpas_democracy_opposition)

Long tag: vdem_cy_v2xpas_democracy_opposition

Original tag: v2xpas_democracy_opposition

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do the parties in the opposition show commitment to democratic norms prior to elections?
CLARIFICATION: The Opposition Parties' Democracy Index (OPDI) ranges from 0 to 1, where lower values are associated with more authoritarian opposition parties and higher values with more democratic opposition parties. As this index is calculated for country-election-year, we advise caution using it for years where the country does not have a general election (lower house).
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xpa_antiplural v2paseatshare v2pagovsup v2x_polyarchy
NOTES: The OPDI is a restricted version of the PSDI index. It only captures the democratic levels for parties in the opposition. The symbol *ws* denotes the weight for the seatshare of the opposition (*op*) for a given election-year (t).
DATA RELEASE: 14-16.
AGGREGATION: The OPDI is calculated using the following equation:

$$\text{OPDI}_{\text{PS}} = 1 - \sum_{p=1}^{N} (\text{v2xpa_antiplural}_{\text{opt}} \cdot ws_{\text{opt}})$$

DATE SPECIFIC: Election-specific dates (V-Party v2 election dates).
CITATION: Angiolillo et al. (2023); Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026) (see suggested citation at the top of this document).
YEARS: 1970-2019

2.3.64.2 Government Coalition Exclusion Index (v2xpas_exclusion_government)

Long tag: vdem_cy_v2xpas_exclusion_government

Original tag: v2xpas_exclusion_government

Dataset citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Grahn, Hicken, Kinzelbach, Krusell, Marquardt, McMann, Mechkova, Medzihorsky, Natsika, Neundorf, Paxton, Pemstein, von Römer, Seim, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wiebrecht, Wig, Wilson & Ziblatt (2026)

QUESTION: To what extent does the party system reject cultural superiority and support immigration policies and the equal participation of women in the labor market?
CLARIFICATION: The Party-System Exclusion Index (PSEXI) ranges from 0 to 1, where lower values are associated with more inclusive party systems and higher values with more exclusive party systems. As this index is calculated for country-election-year, we advise caution using it for years where a country does not have a general election (lower house).
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2paculsup v2paimmig v2pawomlab v2paseatshare v2pagovsup
NOTES: The PSEXI is calculated by using three V-Party variables: v2paculsup, v2paimmig, and v2pawomlab. Using these variables a measure of political parties' exclusion preferences is calculated. Then, seat shares for each political party within that party system

(v2paseatshare) is used to weigh the index and parties are divided into those in the government (v2pagovsup = 0,1, or 2) or those in the opposition (v2pagovsup = 3). The symbol *ws* denotes the weight for the seatshare of the government coalition (*gp*) or opposition (*op*) for a given election-year (*t*).
DATA RELEASE: 14-16.
AGGREGATION: The PSEXI is a derivative of the measure party_exclusion_index_PS, which is calculated using the following formula:

$$\text{party_exclusion_index}_{\text{PS}} = 2(\text{v2paculsup}) + 0.5(\text{v2paimmig} + \text{v2pawomlab})$$

The PSEXI is calculated using the following equation:

$$\text{PSEXI}_{\text{PS}} = 1 - \left[\left(\&\sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{gpt}} \cdot ws_{\text{gpt}})\right) + \&\sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{opt}} \cdot ws_{\text{opt}})\right]$$

DATE SPECIFIC: Election-specific dates (V-Party v2 election dates).

Description:
VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent does the party system show commitment to democratic norms prior to elections?
CLARIFICATION: The Party-System Democracy Index (PSDI) ranges from 0 to 1, where lower values are associated with more authoritarian party systems and higher values with more democratic party systems. As this index is calculated for country-election-year, we advise caution using it for years where a country does not have a general election (lower house).
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2xpa_antiplural v2paseatshare v2pagovsup v2x_polyarchy
NOTES: The PSDI is calculated by using two V-Party variables: (1) the anti-pluralist index for each political party in a given party system (v2xpa_antiplural) and (2) the seat shares

for each political party within that party system (v2paseatshare). Political parties are further divided into those in the government (v2pagovsup = 0, 1, or 2) or those in the opposition (v2pagovsup = 3). To account for hegemonic or competitive authoritarian regimes that allow opposition parties to exist, missing values for a non-existent opposition are replaced with 0 if the electoral democracy index (v2x_polyarchy) scores lower than 0.5 for that country-election-year. Consequently, these missing values are separated from missing values due to delayed formation of the executive, or inability for parties to reach a governmental coalition resulting in missing values for the opposition. The symbol *ws* denotes the weight for the seatshare of the government coalition (*gp*) or opposition (*op*) for a given election-year (*t*).
DATA RELEASE: 14-16.
AGGREGATION: The PSDI is calculated using the following equation:

$$\text{PSDI}_{\text{PS}} = 1 - \left[\left(\&\sum_{p=1}^{N} (\text{v2xpa_antiplural}_{\text{gpt}} \cdot ws_{\text{gpt}}) \right) + \&\sum_{p=1}^{N} (\text{v2xpa_antiplural}_{\text{opt}} \cdot ws_{\text{opt}}) \right]$$

DATE SPECIFIC: Election-specific dates (V-Party v2 election dates).
CITATION: Angiolillo et al. PROJECT MANAGER(S): Brigitte Seim, Daniel Pemstein, Juraj Medzihorsk
QUESTION: To what extent is the ideal of electoral integrity achieved?
CLARIFICATION: Electoral integrity is a set of principles to be achieved in elections which empower the everyday citizen and help to realize the ideals of democracy. There are four principles of electoral integrity: 1) Contestation; 2) Participation; 3) Deliberation; and 4) Adjudication.
SCALE: Interval, from low to high (0-1)

ADDITIONAL VERSIONS: *_osp, *_codelow, *_codehigh
QUESTION: What is the country's accumulated stock of electoral democracy?
CLARIFICATION: A country's accumulated stock of electoral democracy accounts for the cumulative sum of all past values on the Electoral Democracy Index, with a one-percent annual depreciation rate. This measure reflects the extent to which a country has accumulated experience over time with electoral democracy, compared to a hypothetical country that has always attained the ideal of electoral democracy to the fullest extent. A higher value indicates longer or more consistent electoral democracy, even if recent levels have fluctuated.
SCALE: Interval, from low to high (0-1).
SOURCE(S): v2x_polyarchy
DATA RELEASE: 16.
AGGREGATION: This index is formed by taking the sum of all past values on the Electoral Democracy Index using a 1percent annual depreciation rate and then rescaling into a 0-1 interval. We assume that cases enter the sample with no accumulated stock. For each subsequent year, we calculate stock as the previous year's depreciated stock plus the prior year's level of electoral democracy (v2x polyarchy). To improve interpretability and cross-country comparability, we rescale stock variable to fall within the 0–1 interval. The stock index is calculated using the following formula: The procedure for filling gaps is as

follows:
{[v2x_polyarchy_stock = (0.01)
$\sum_{s=0}^{t-1} 0.99^{t-1-s}\, v2x_polyarchy_{i,s}\{](1)Historicalrecoding(e.g., basedoncolonialoroccupyingregimes)isapplied$

2.4 V-Dem Episodes of Regime Transformation Dataset

Dataset tag: vdem_ert

Output Unit: V-Dem Country-Year, i.e., data is collected per country and year. That means each row in the dataset can be identified by one country in combination with a year, using the columns country_text_id and year. The unit can also be expressed using the columns country_id and year.

Description: The ERT dataset identifies episodes of democratization (liberalizing autocracy, democratic deepening) and autocratization (democratic regression, autocratic regression) in the most recent V-Dem dataset.

Dataset citation: Edgell, Amanda B., Seraphine F. Maerz, Laura Maxwell, Richard Morgan, Juraj Medzi- horsky, Matthew C. Wilson, Vanessa A. 2.4.1 Regime Type Variables

This section includes variables related to regime type, country, and year.

2.4.1.1 Country identifier (country_id)

Long tag: vdem_ert_country_id

Original tag: country_id

Dataset citation: Edgell et al. (2026)

Description:

What is the V-Dem unique country identifier for this case?
Format: integer, [3,236]

2.4.1.2 Country text identifier (country_text_id)

Long tag: vdem_ert_country_text_id

Original tag: country_text_id

Dataset citation: Edgell et al. (2026)

Description:

What is the V-Dem country text identifier for this case?
Format: string

2.4.1.3 Country name (country_name)

Long tag: vdem_ert_country_name

Original tag: country_name

Dataset citation: Edgell et al. (2026)

Description:

What is the V-Dem country name for this case?
Format: string

2.4.1.4 Year (year)

Long tag: vdem_ert_year

Original tag: year

Dataset citation: Edgell et al. (2026)

Description:

What is the year of this observation?
Clarification: Based on 31 December or the average of historical date from V-Dem.
Format: integer, [1900,2019]

2.4.1.5 Regimes of the World (v2x_regime)

Long tag: vdem_ert_v2x_regime

Original tag: v2x_regime

Dataset citation: Edgell et al. (2026)

Variable citation: Lührmann et al. (2018), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

What is the regime value for this country-year according to the Regimes of the World?
0– Closed autocracy
1– Electoral Autocracy
2– Electoral Democracy
3– Liberal Democracy
Format: integer, [0,3]

2.4.1.6 Electoral democracy index (v2x_polyarchy)

Long tag: vdem_ert_v2x_polyarchy

Original tag: v2x_polyarchy

Dataset citation: Edgell et al. (2026)

Variable citation: Teorell et al. (2019), Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von

Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

What is the country's current score on the V-Dem electoral democracy index (EDI)?
Format: interval, [0,1]
Other versions: v2x polyarchy codelow; v2x polyarchy codehigh

2.4.1.7 Regime founding (reg_start_year)

Long tag: vdem_ert_reg_start_year

Original tag: reg_start_year

Dataset citation: Edgell et al. (2026)

Description:

When was the current regime founded?
Clarification: This variable is coded as the year the regime was founded and is coded for the entire duration of the regime.
For democratic regimes, this is coded as the year after the country moves from autocracy to democracy on the RoW measure, provided that direct national-level elections for the parliament, executive, or a constituent assembly are subsequently held under conditions of democracy (on the RoW measure) and the elected officials are able to assume office.
For autocratic regimes, this is generally defined as the year the country moved from democracy to autocracy on the RoW measure. To guard against noise in the data, we require that cases moving from democracy to electoral autocracy stay autocratic for the tolerance period (e.g. 5 years) or hold an autocratic founding election. Autocratic founding elections are defined as the first direct national-level election for the parliament, executive, or a constituent assembly having been held under conditions of autocracy on the RoW measure.
To deal with left censoring, we code the first regime after the coding starts or a gap in the case based solely on the RoW value, and set its founding year as the first observation year after the coding starts or a gap ends in the data.
We deal with right censoring conservatively, by assuming the regime persists until we receive information to the contrary. Because democratic regime founding (i.e. transition) is not completed until the founding democratic election occurs, those cases where a change in RoW results in democracy without holding an election before the end of coding or a gap in coding are treated as remaining autocratic. Likewise, for changes from democracy to electoral autocracy that occur within the tolerance (e.g. 5 years) of the coding end or gap in the dataset and do not hold a founding autocratic election, we also treat as remaining democratic until the coding end or gap. For changes from democracy to closed autocracy, censoring is not an issue as we take the year the case becomes closed as the transition or founding of the new autocratic regime.
Required variables: v2x regime; v2eltype 0; v2eltype 4; v2eltype 6; v2elasmoff ord Format: year, [1900,2019]

2.4.1.8 Regime termination (reg_end_year)

Long tag: vdem_ert_reg_end_year

Original tag: reg_end_year

Dataset citation: Edgell et al. (2026)

Description:

When will the current regime end?
Clarification: This variable is coded as the year the regime ends and is coded for the entire duration of the regime.
For democratic regimes, this is generally coded as the year the country moved from democracy to autocracy on the RoW measure, provided that it resulted in a democratic breakdown. To guard against noise in the data, we require that cases moving from democracy to electoral autocracy stay autocratic for the tolerance period or hold an autocratic founding election. Autocratic founding elections are defined as the first direct national-level election for either the parliament, executive, or a constituent assembly having been held under conditions of

autocracy on the RoW measure, after a transition from democracy to autocracy on the RoW measure.
For autocratic regimes, this is coded as the year the country moves from autocracy to democracy on the RoW measure, provided that direct national-level elections for the parliament, executive, or a constituent assembly are subsequently held under conditions of democracy (on the RoW measure) and the elected officials are able to assume office.
Right censoring is not an issue for changes between autocracy and democracy, because the regime ending (i.e. transition) is not completed until after the founding democratic election occurs. Thus, we assume the previous autocratic regime persists until we receive information to the contrary. A change in RoW resulting in democracy that stays there to the end of the coding or a gap in coding without holding an election is treated as remaining autocratic.
For changes from democracy to closed autocracy (i.e. breakdown), censoring is also not an issue as we take the year prior to when the case becomes closed as the end of the regime.
For changes from democracy to electoral autocracy that occur within the tolerance (e.g. 5 years) of the coding end or gap in the dataset and do not hold a founding autocratic election, we treat these as remaining democratic until the coding end or gap.
Required variables: v2x regime; v2eltype 0; v2eltype 4; v2eltype 6; v2elasmoff ord
Format: year, [1900,2019]

2.4.1.9 Regime identifier (reg_id)

Long tag: vdem_ert_reg_id

Original tag: reg_id

Dataset citation: Edgell et al. (2026)

Description:

What is the unique regime identifier?
Clarification: This is a combination of the country text id, start, and end year of the regime.
Required variables: country text id, reg start year, reg end year.
Format: string

2.4.1.10 Regime type (reg_type)

Long tag: vdem_ert_reg_type

Original tag: reg_type

Dataset citation: Edgell et al. (2026)

Description:

What is the current regime type?
Clarification: This variable denotes whether the current regime can be classified as a democracy or autocracy.
0– Autocracy. A country-year coded as autocracy on the RoW measure that has had an autocratic transition, i.e. (a) closed autocracy; or (b) electoral autocracy that has held an autocratic founding election and/or stayed autocratic for the tolerance period (e.g. 5 years).
1– Democracy. A country-year coded as democracy on the RoW measure that has held a democratic founding election. The year of the founding election is included.
To deal with left censoring, we code the first regime after the coding starts or a gap in the case purely based on the RoW value, and set its founding year as the first observation year after the coding starts or a gap ends in the data.
Right censoring is not an issue for changes between autocracy and democracy, because the regime founding (i.e. transition) is not completed until the founding democratic election occurs. Thus, we assume the previous autocratic regime persists until we receive information to the contrary. A change in RoW resulting in democracy that stays there to the end of the coding or a gap in coding without holding an election is treated as remaining autocratic.
For changes from democracy to closed autocracy, censoring is also not an issue as we take the year the case becomes closed as the transition or founding of the new autocratic regime.
For changes from democracy to electoral autocracy that occur within the tolerance (e.g. 5 years) of the coding end or gap in the dataset and do not hold a founding autocratic election, we treat these as remaining democratic until the coding end or gap.
Required variables: v2x regime, reg founding Format: categorical, [0,1]

2.4.1.11 Regime transition (reg_trans)

Long tag: vdem_ert_reg_trans

Original tag: reg_trans

Dataset citation: Edgell et al. (2026)

Description:

Was there a regime transition in the country-year? If so, what type?
Clarification: This variable is coded based on a transition between democracy and au- tocracy based on the regime founding criteria. It is coded as the final year of a regime.
-1– Democratic breakdown.
0– No regime transition
1– Democratic transition.
Required variables: reg type Format: categorical, [-1,1]

2.4.1.12 Founding election (dem_founding_elec)

Long tag: vdem_ert_dem_founding_elec

Original tag: dem_founding_elec

Dataset citation: Edgell et al. (2026)

Description:

When was the founding democratic election for this regime?
Clarification: This variable is only coded for democratic regime years and reflects the first election held under democracy within the democratic regime that allowed officials to assume office in either the legislature, executive, or a constituent assembly. It is coded for all years of the regime and missing for all non-democratic country-years.
Required variables: v2eltype 0, v2eltype 4, v2eltype 6, v2elasmoff ord, v2x regime Format: year, [1903,2019]
NA: V-Dem data required to construct the variable is missing.

2.4.1.13 Founding autocratic election (aut_founding_elec)

Long tag: vdem_ert_aut_founding_elec

Original tag: aut_founding_elec

Dataset citation: Edgell et al. (2026)

Description:

When was the founding autocratic election for this regime?
Clarification: This variable is only coded for autocratic regime years and reflects the first election held under autocracy in either the legislature, executive, or a constituent assembly. It is coded for all years of the regime and missing for all democratic country- years.
Required variables: v2eltype 0, v2eltype 4, v2eltype 6, v2x regime Format: year, [1903,2019]
NA: V-Dem data required to construct the variable is missing.

2.4.1.14 RoW regime change event (row_regch_event)

Long tag: vdem_ert_row_regch_event

Original tag: row_regch_event

Dataset citation: Edgell et al. (2026)

Description:

Was there a regime change according to the RoW measure during this country-year?
Clarification: This variable is coded based on a change between democracy and autocracy on the RoW measure.
-1– Change from democracy to autocracy on RoW
0– No regime change on RoW
1– Change from autocracy to democracy on RoW
Required variables: v2x regime Format: categorical, [-1,1]

2.4.1.15 RoW regime change censored (row_regch_censored)

Long tag: vdem_ert_row_regch_censored

Original tag: row_regch_censored

Dataset citation: Edgell et al. (2026)

Description:

Is this particular regime change censored?
Clarification: If the regime change on RoW between democracy and autocracy occurs within tolerance period (e.g. 5 years) of the end of coding or a gap in coding, it is considered censored unless we know there was a breakdown or democratic transition based on above criteria.
Required variables: row regch event, codingend, gapstart1, gapstart2, gapstart3
Format: dummy, [0,1]

2.4.2 Democratization Episodes

This section includes variables related to democatization.

2.4.2.1 Democratization episode (dem_ep)

Long tag: vdem_ert_dem_ep

Original tag: dem_ep

Dataset citation: Edgell et al. (2026)

Description:

Was there an ongoing democratization episode during the country-year?
Clarification: A period of substantial and sustained increases on V-Dem's Electoral Democracy Index (EDI). The default parameters require that such a period begin with an initial 0.01 increase on the EDI and a total increase of at least 0.10 throughout the episode. A democratization episode ends the final year of a positive change greater than or equal to the initial increase (e.g. 0.01), prior to experiencing an annual drop, cumula- tive drop, or stasis period. These are defined in the defaults as –0.03, –0.10, and 5 years, respectively.
Required variables: v2x polyarchy
Format: dummy, [0,1]

2.4.2.2 Democratization episode identifier (dem_ep_id)

Long tag: vdem_ert_dem_ep_id

Original tag: dem_ep_id

Dataset citation: Edgell et al. (2026)

Description:

What is the unique identifier for current the democratization episode?
Clarification: This is a combination of the country text id, start, and end year of the episode. This is coded for all episode years and the pre-episode year.
Required variables: country text id, dem ep start year, dem ep end year.
Format: string

2.4.2.3 Democratization episode start year (dem_ep_start_year)

Long tag: vdem_ert_dem_ep_start_year

Original tag: dem_ep_start_year

Dataset citation: Edgell et al. (2026)

Description:

When did the current episode of democratization begin?
Clarification: The first year of the democratization episode, defined as the first year of a positive change equal or greater than the start inclusion (e.g. +0.01) on the EDI, followed by a period of sustained positive changes on the EDI. This is coded for all years within the episode and

the pre-episode year.
Format: year, [1901,2018]

2.4.2.4 Democratization episode end year (dem_ep_end_year)

Long tag: vdem_ert_dem_ep_end_year

Original tag: dem_ep_end_year

Dataset citation: Edgell et al. (2026)

Description:

When will the current episode of democratization end?
Clarification: The final year of the democratization episode, defined as the last positive change equal to or greater than the start inclusion (e.g. +0.01) on the EDI before experiencing an annual drop (e.g. -0.03), gradual drop over the tolerance (e.g. -0.10 over 5 years), or a period of no positive changes on the EDI equal to the start inclusion (e.g. +0.01) for the tolerance (e.g. 5 years). This is coded for all years within the episode and the pre-episode year.
Format: year, [1902,2019]

2.4.2.5 Pre-democratization episode year (dem_pre_ep_year)

Long tag: vdem_ert_dem_pre_ep_year

Original tag: dem_pre_ep_year

Dataset citation: Edgell et al. (2026)

Description:

Will a democratization episode begin in the following year?
Clarification: Coded as the year before a democratization episode begins.
Format: dummy, [0,1]

2.4.2.6 Democratization episode termination type (dem_ep_termination)

Long tag: vdem_ert_dem_ep_termination

Original tag: dem_ep_termination

Dataset citation: Edgell et al. (2026)

Description:

Why did the current democratization episode terminate the year it did?
Clarification: Democratization episodes generally end the final year of a positive change greater than or equal to the start incl parameter (e.g. 0.01). This is coded for the entire episode. The reasons for termination include:
0– Censored. This occurs when the episode has not experienced any of the below conditions and experienced its last positive change greater than or equal to the start incl parameter (e.g. 0.01) within the tolerance period of coding end or a gap in coding (e.g. 5 years).
1– Stasis. The episode terminated because the political unit did not experience any subsequent increases greater than or equal to the start incl parameter (e.g. +0.01) for a period of time longer than the tolerance period (e.g. 5 years).
2– Year drop. The episode terminated because the political unit experienced an an- nual drop of less than or equal to the year turn parameter (e.g. -0.03) within the tolerance window (e.g. 5 years) of its last positive change greater than or equal to start incl (e.g. +0.01).
3– Cumulative drop. The episode terminated because the political unit experienced a cumulative drop less than or equal to the cum turn parameter (e.g. -0.10) within the tolerance window (e.g. 5 years) of the last positive change greater than or equal to start incl (e.g. +0.01). Note: Using our default parameters with v10 produces no cases of this. All are absorbed by category 2, "year drop". However, we maintain it here and in the script for those who might encounter this independent of a year drop depending on how the parameters are set.
4– Closed or breakdown. The episode terminated because the country reverted to closed authoritarianism on the RoW measure or experienced a democratic break- down according to reg trans.
Required variables: v2x polyarchy, v2x regime, codingend, gapstart1, gapstart2, gap- start3
Format: categorical, [0,4]

2.4.2.7 Episode with potential democratic transition (dem_ep_prch)

Long tag: vdem_ert_dem_ep_prch

Original tag: dem_ep_prch

Dataset citation: Edgell et al. (2026)

Description:

Is there an ongoing democratization episode within the political unit that has/had the potential for a regime change?
Clarification: By regime change, we mean a reclassification from autocracy to democracy ("democratic transition"). To count as a "democratic transition", the country must move from autocracy (lt;2) to democracy (2) on the RoW within the episode period and experience a "founding" democratic election (i.e. elections for the legislature, executive, or constituent assembly) for which the elected officials were able to assume office. Here we are not interested in movements between intermediate types of autocracy (i.e. electoral or closed) or democracy (i.e. electoral or liberal). Instead, this variable captures whether an episode originates in an authoritarian regime and has the potential to produce a democratic transition. This variable is coded for the entire episode, even if the transition has already occurred.
0– Not in an episode with the potential for democratic transition.
1– In an episode with the potential for democratic transition.
Notes: This variable supersedes "sub dem ep" (ERT v1.2). It will be useful for re- searchers interested in studying a subset of democratization episodes where autocracies had the potential to become democratic (i.e. liberalizing autocracies).
Required variables: dem ep, reg type Format: dummy, [0,1]

2.4.2.8 Post-democratic transition episode year (dem_ep_ptr)

Long tag: vdem_ert_dem_ep_ptr

Original tag: dem_ep_ptr

Dataset citation: Edgell et al. (2026)

Description:

Has the political unit experienced a democratic transition within the current episode?
Clarification: This variable captures whether, during the current episode of democrati- zation, the political unit experienced a democratic transition. In other words, it captures those years of democratic deepening that occur in an episode after a democratic transition occurred.
0– No democratic transition has occurred 1– A democratic transition has occurred
Notes: This variable supersedes "sub dem ep" (ERT v1.2). This variable may be useful for those who wish to limit their analysis to the authoritarian years of an episode prior to a democratic transition.
Required variables: dem ep, reg trans, dem ep prch
Format: dummy, [0,1]

2.4.2.9 Democratic transition and democratic deepening (dem_ep_subdep)

Long tag: vdem_ert_dem_ep_subdep

Original tag: dem_ep_subdep

Dataset citation: Edgell et al. (2026)

Description:

Did the current episode experience a democratic transition and subsequently democratic deepening?
Clarification: This variable is coded for episodes that experienced a democratic transition followed by democratic deepening. It is coded for the entire episode. It provides a further refinement of the outcome (dem ep outcome) for those who are interested in exploring which episodes culminated in transition versus those that continued deepening after the transition.
0– This episode does not experience a democratic transition and democratic deepening
1– This episode experiences a democratic transition and subsequently democratic deepening
Required variables: dem_ep, reg _rans, dem_ep_prch, dem_ep_ptr

Format: dummy, [0,1]

2.4.2.10 Democratization outcome (dem_ep_outcome)

Long tag: vdem_ert_dem_ep_outcome

Original tag: dem_ep_outcome

Dataset citation: Edgell et al. (2026)

Description:

What was the outcome of the current democratization episode?
Clarification: This variable captures detailed outcomes of the episodes. Episodes experiencing a democratic transition are coded accordingly, even if the episode endures a subsequent period of democratic deepening. Separate variables (dem ep subdep, dem ep ptr) account for this variation.
0–There is no democratization episode during this year.
1 - Democratic transition. The episode resulted in a change from autocracy to democ- racy on the RoW measure followed by a democratic founding election. Applies to entire episode, even if subsequent democratic deepening occurred.
2– Preempted democratic transition. The episode resulted in a change from autocracy to democracy on the RoW measure but the political unit did not hold a democratic founding election before reverting to autocracy.
3– Stabilized electoral autocracy. The episode did not result in a change from au- tocracy to democracy on the RoW measure, and the political unit stabilized as an electoral autocracy for the tolerance period (e.g. 5 years) without subsequent improvements equal to the start inclusion (e.g. +0.01).
4– Reverted liberalization. The episode (a) never resulted in change from closed au- tocracy on the RoW measure, (b) resulted in an electoral autocracy on the RoW measure but the political unit reverted back to closed autocracy, (c) resulted in an electoral autocracy on the RoW measure but the political unit experienced a sub- sequent annual decline less than or equal to the year turn parameter (e.g. -0.03) or a decline less than the cum turn parameter (e.g. -0.10) on the EDI over the course of the tolerance period (e.g. 5 years).
5– Deepened democracy. The episode resulted in further liberalization or democrati- zation of a political unit that was already classified as democracy in the pre-episode year.
6– Uncertain. The outcome of the episode is uncertain because it has the potential for a regime change (dem ep prch==1) but is ongoing in the final observation year of the dataset or before a gap in coding is encountered.
Note: This variable supersedes the older version (ERT v1.2) and has been recoded at the entire episode level. There may be a small number of observations (or none, depending on parameters) within each of these outcome types. Users should be aware and consider the more aggregate outcome types for statistical analysis.
Required variables: dem ep, row regch event, reg type, dem ep termination Format: categorical, [0,6]

2.4.2.11 Aggregate democratization outcome (dem_ep_outcome_agg)

Long tag: vdem_ert_dem_ep_outcome_agg

Original tag: dem_ep_outcome_agg

Dataset citation: Edgell et al. (2026)

Description:

What was the aggregate outcome of the current democratization episode?
Clarification: This variable captures aggregate outcomes of the episodes. Episodes experiencing a democratic transition are coded accordingly, even if the episode endures a subsequent period of democratic deepening or autocratic regression. Separate variables (dem ep subdep, dem ep ptr) account for this variation.
0–There is no democratization episode during this year.
1- Democratic transition. The episode resulted in a change from autocracy to democ- racy on the RoW measure followed by a democratic founding election. Applies to entire episode, even if subsequent democratic deepening occurred.

2– No democratic transition. The episode did not result in a change from autocracy to democracy on the RoW measure; or it did result in a change between democracy and autocracy on the RoW measure, but the political unit did not hold a democratic founding election before reverting to autocracy.
3– Deepened democracy. The episode resulted in further liberalization or democrati- zation of a political unit that was already classified as democracy in the pre-episode year.
4– Uncertain. The outcome of the episode is uncertain because it has the potential for a regime change (dem ep prch==1) but is ongoing in the final observation year of the dataset or before a gap in coding is encountered.
Note: This variable provides an aggregate alternative to dem ep outcome that may be more useful for those engaging in statistical modeling.
Required variables: dem ep, row regch event, reg type, dem ep termination Format: categorical, [0,4]

2.4.2.12 Democratization episode censored (dem_ep_censored)

Long tag: vdem_ert_dem_ep_censored

Original tag: dem_ep_censored

Dataset citation: Edgell et al. (2026)

Description:

Is the current democratization episode censored?
Clarification: A democratization episode may be censored if its end date corresponds with the date the coding for the case ends (i.e. codingend) or the year before a gap starts in the coding (i.e. gapstart1, gapstart2, gapstart3).
Required variables: dem_ep_end_year, codingend, gapstart1, gapstart2, gapstart3 Format: dummy, [0,1]

2.4.3 Autocratization Episodes

This section includes variables related to autocratization.

2.4.3.1 Autocratization episode (aut_ep)

Long tag: vdem_ert_aut_ep

Original tag: aut_ep

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Was there an ongoing autocratization episode during the country-year?
CLARIFICATION: A period of substantial and sustained decreases on V-Dem's Electoral Democracy Index (EDI). The default parameters require that such a period begin with an initial –0.01 decrease on the EDI and a total decrease of at least –0.10 throughout the episode. An autocratization episode ends the final year of a negative change less than or equal to the initial decrease (e.g. –0.01), prior to experiencing an annual increase, cumulative increase, or stasis period. These are defined in the defaults as +0.03, +0.10, and 5 years respectively.
REQUIRED VARIABLES: v2x_polyarchy
FORMAT: dummy, [0,1]

2.4.3.2 Autocratization episode identifier (aut_ep_id)

Long tag: vdem_ert_aut_ep_id

Original tag: aut_ep_id

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: What is the unique identifier for current the autocratization episode? This is coded for all episode years and the pre-episode year.

CLARIFICATION: This is a combination of the country text id, start, and end year of the episode.
REQUIRED VARIABLES: country_text_id, aut_ep_start year, aut_ep_end_year.
FORMAT: string

2.4.3.3 Autocratization episode start year (aut_ep_start_year)

Long tag: vdem_ert_aut_ep_start_year

Original tag: aut_ep_start_year

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: When did the current episode of autocratization begin?
CLARIFICATION: The first year of the autocratization episode, defined as the first year of a negative change equal or less than the start inclusion (e.g. -0.01) on the EDI, followed by a period of sustained negative changes on the EDI. This is coded for all episode years and the pre-episode year.
FORMAT: year, [1905,2017]

2.4.3.4 Autocratization episode end year (aut_ep_end_year)

Long tag: vdem_ert_aut_ep_end_year

Original tag: aut_ep_end_year

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: When will the current episode of autocratization end?
CLARIFICATION: The final year of the autocratization episode, defined as the last negative change equal to or less than the start inclusion (e.g. –0.01) on the EDI before experiencing an annual increase (e.g. +0.03), gradual increase over the tolerance (e.g. +0.10 over 5 years), or a period of no negative changes less than or equal to the start inclusion (e.g. –0.01) on the EDI for the tolerance (e.g. 5 years). This is coded for all years of the episode and the pre-episode year.
FORMAT: year, [1906,2019]

2.4.3.5 Pre-autocratization episode year (aut_pre_ep_year)

Long tag: vdem_ert_aut_pre_ep_year

Original tag: aut_pre_ep_year

Dataset citation: Edgell et al. (2026)

Description:

CLARIFICATION: Coded as the year before an autocratization episode begins.
FORMAT: dummy, [0,1]

2.4.3.6 Autocratization episode termination type (aut_ep_termination)

Long tag: vdem_ert_aut_ep_termination

Original tag: aut_ep_termination

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Why did the current autocratizaton episode terminate in the year it did?
CLARIFICATION: Autocratization episodes generally end the final year of a negative change less than or equal to the start incl parameter (e.g. -0.01). This variable is coded for all episode years. The reasons for termination include:
0– Censored. This occurs when the episode has not experienced any of the below con- ditions and experienced its last negative change less than or equal to the start incl parameter (e.g. -0.01) within the tolerance period of coding end or a gap in coding (e.g. 5 years).
1– Stasis. The episode terminated because the political unit did not experience any

subsequent decreases less than or equal to the start incl parameter (e.g. -0.01) for a period of time longer than the tolerance period (e.g. 5 years).
2– Year increase. The episode terminated because it experienced an annual increase greater than or equal to the year turn parameter (e.g. +0.03) within the tolerance window (e.g. 5 years) of its last negative change.
3– Cumulative increase. The episode terminated because it experienced a cumulative increase greater than or equal to the cum turn parameter (e.g. +0.10) within the tolerance window (e.g. 5 years) of the last negative change. Note: Using our default parameters with v10 produces no cases of this. All are absorbed by category 2, "year increase". However, we maintain it here and in the script for those who might encounter this independent of a year increase depending on how the parameters are set.
4– Democratic transition. The episode terminated because the country experienced a democratic transition according to reg trans.
REQUIRED VARIABLES: v2x_polyarchy, v2x_regime
Format: categorical, [0,3]

2.4.3.7 Episode with potential democratic breakdown (aut_ep_prch)

Long tag: vdem_ert_aut_ep_prch

Original tag: aut_ep_prch

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Is there an ongoing autocratization episode within the political unit that has/had the potential for a regime change?
CLARIFICATION: By regime change, we mean a reclassification from democracy to autocracy ("democratic breakdown"). To count as a "democratic breakdown", the country must move from democracy (2) to autocracy (lt;2) on the RoW within the episode period and experience either a "founding" autocratic election (i.e. elections for the legislature, executive, or constituent assembly) or remain classified as autocratic for the tolerance period (e.g. 5 years). Here we are not interested in movements between intermediate types of autocracy (i.e. electoral or closed) or democracy (i.e. electoral or liberal). Instead, this variable captures whether an episode originates in an democratic regime and has the potential to produce a democratic breakdown. This variable is coded for the entire episode, even if the transition has already occurred.
0– Not in an episode with the potential for democratic breakdown.
1– In an episode with the potential for democratic breakdown.
Notes: This variable supersedes "sub aut ep" (ERT v1.2). It will be useful for researchers interested in studying a subset of autocratization episodes where democracies had the potential to become autocratic (i.e. democratic regression).
Required variables: aut ep, reg type
FORMAT: dummy, [0,1]

2.4.3.8 Post-democratic breakdown episode year (aut_ep_pbr)

Long tag: vdem_ert_aut_ep_pbr

Original tag: aut_ep_pbr

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Has the political unit experienced a democratic breakdown within the current episode?
CLARIFICATION: This variable captures whether, during the current episode of autocratiza- tion, the political unit experienced a democratic breakdown. In other words, it captures those years of autocratic regression that occur in an episode after a democratic breakdown occurred.
0– No democratic breakdown has occurred
1– A democratic breakdown has occurred
NOTES: This variable supersedes "sub aut ep" (ERT v1.2). This variable may be useful for

those who wish to limit their analysis to the democratic years of an episode prior to a democratic breakdown.
REQUIRED VARIABLES: aut_ep, reg_trans, aut_ep_prch
FORMAT: dummy, [0,1]

2.4.3.9 Democratic breakdown and autocratic regression (aut_ep_subreg)

Long tag: vdem_ert_aut_ep_subreg

Original tag: aut_ep_subreg

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Did the current episode experience a democratic breakdown and subsequently autocratic regression?
CLARIFICATION: This variable is coded for episodes that experienced a democratic breakdown followed by autocratic regression. It is coded for the entire episode. It provides a further refinement of the outcome (aut ep outcome) for those who are interested in exploring which episodes culminated in breakdown versus those that continued autocratizing after the breakdown.
0– This episode does not experience a democratic breakdown and autocratic regression
1– This episode experiences a democratic breakdown and subsequently autocratic re- gression
REQUIRED VARIABLES: aut_ep, reg_trans, aut_ep_prch, aut_ep_pbr
FORMAT: dummy, [0,1]

2.4.3.10 Autocratization outcome (aut_ep_outcome)

Long tag: vdem_ert_aut_ep_outcome

Original tag: aut_ep_outcome

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: What was the outcome of the current autocratization episode?
CLARIFICATION: This variable captures detailed outcomes of the episodes. Episodes experi- encing democratic breakdown are coded accordingly, even if the episode endures a sub- sequent period of autocratic regression. Separate variables (aut ep subreg, aut ep pbr) account for this variation.
0– There is no autocratization episode during this year.
1– Democratic breakdown. The episode resulted in the political unit (a) becoming a closed autocracy on RoW, (b) becoming an electoral autocracy and staying there for at least one election, or (c) becoming an electoral autocracy and staying there for at least the tolerance period (e.g. 5 years). Applies to entire episode, even if subsequent autocratic regression occurred.
2– Preempted democratic breakdown. The episode resulted the political unit becoming an electoral autocracy, but it reclaimed its democratic status without holding an autocratic founding election and within the tolerance period (e.g. 5 years).
3– Diminished democracy. While the democracy retained its democratic status, the episode resulted in depreciated levels of electoral democracy or a transition to elec- toral democracy from liberal democracy, that was sustained for the tolerance period (e.g. 5 years). Note - with the default parameters we do not observe this outcome.
4– Averted regression. The episode (a) never resulted in a change from liberal democ- racy, (b) resulted in an electoral democracy on the RoW measure but the political unit reverted back to liberal democracy, (c) resulted in an electoral democracy on the RoW measure but the political unit experienced a subsequent increase greater than or equal to the year turn parameter (e.g. 0.03) or a decline greater than or equal to the cum turn parameter (e.g. 0.10) on the EDI over the course of the tolerance period (e.g. 5 years).
5– Regressed autocracy. The episode resulted in further autocratization of a political unit that was already classified as autocratic in the pre-episode year.
6– Uncertain. The outcome of the episode is uncertain because it has the potential for a

regime change (aut ep prch==1) but is ongoing in the final observation year of the dataset or before a gap in coding is encountered.
NOTE: This variable supersedes the older version (ERT v1.2) and has been recoded at the entire episode level. There may be a small number of observations (or none, depending on parameters) within each of these outcome types. Users should be aware and consider the more aggregate outcome types for statistical analysis.
REQUIRED VARIABLES: aut_ep, row_regch event, reg_type, aut_ep_termination
FORMAT: categorical, [0,6]

2.4.3.11 Aggregate Autocratization outcome (aut_ep_outcome_agg)

Long tag: vdem_ert_aut_ep_outcome_agg

Original tag: aut_ep_outcome_agg

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: What was the aggregate outcome of the current autocratization episode?
CLARIFICATION: This variable captures aggregate outcomes of the episodes. Episodes expe- riencing democratic breakdown are coded accordingly, even if the episode endures a sub- sequent period of autocratic regression. Separate variables (aut ep subreg, aut ep pbr) account for this variation.
0– There is no autocratization episode during this year.
1– Democratic breakdown. The episode resulted in the political unit (a) becoming a closed autocracy on RoW, (b) becoming an electoral autocracy and staying there for at least one election, or (c) becoming an electoral autocracy and staying there for at least the tolerance period (e.g. 5 years). Applies to entire episode, even if subsequent autocratic regression occurred.
2– No democratic breakdown. The episode did not result in a change from democracy to autocracy on the RoW measurel or it did result in a change between democracy and autocracy on the RoW measure, but the political unit did not hold an autocratic founding election or remain autocratic for the tolerance period (e.g. 5 years) before restoring democracy.
3– Regressed autocracy. The episode resulted in further autocratization of a political unit that was already classified as autocratic in the pre-episode year.
4– Uncertain. The outcome of the episode is uncertain because it has the potential for a regime change (aut ep prch==1) but is ongoing in the final observation year of the dataset or before a gap in coding is encountered.
NOTE: This variable provides an aggregate alternative to aut ep outcome that may be more useful for those engaging in statistical modeling.
REQUIRED VARIABLES: aut_ep, row_regch_event, reg_type, aut_ep_termination
FORMAT: categorical, [0,4]

2.4.3.12 Autocratization episode censored (aut_ep_censored)

Long tag: vdem_ert_aut_ep_censored

Original tag: aut_ep_censored

Dataset citation: Edgell et al. (2026)

Description:

QUESTION: Is the current autocratization episode censored?
CLARIFICATION: An autocratization episode may be censored if its end date corresponds with the date the coding for the case ends (i.e. codingend) or the year before a gap starts in the coding (i.e. gapstart1, gapstart2, gapstart3).
NOTE: This is coded for the entire episode. Thus, episodes where a period of democratic regression results in a breakdown may still be censored overall if the resulting period of autocratic regression is censored.
REQUIRED VARIABLES: aut_ep_end_year, codingend, gapstart1, gapstart2, gapstart3
FORMAT: dummy, [0,1]

2.5 V-Dem V-Party Coder Level v2

Dataset tag: vdem_vp_coder_level

Output Unit: V-Dem Party-Date-Coder, i.e., data is collected per perty, country and date. That means each row in the dataset can be identified by a party in combination with a date, using the columns v2paid and historical_date. To make the party Ids more comprehensive, we also include the party name (v2paenname) in the Output Unit as well as the country_name variable for aggregation and disaggregation.

Another unit for this dataset is party, country and year. Hence, a row in the dataset can also be identified through a combination of a party, a county and a year using the columns v2paid, country_name and year.

Description: Includes global data on Political Parties at the coder level.

2.5.1 Identifier Variables

This section lists the identifier variables in the V-Dem V-Party Dataset

2.5.1.1 Country name abbreviation (A*) (country_text_id)

Long tag: vdem_vp_coder_level_country_text_id

Original tag: country_text_id

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Abbreviated country names.
RESPONSES: Text
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.5.1.2 Numeric party identifier (v2paid)

Long tag: vdem_vp_coder_level_v2paid

Original tag: v2paid

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Unique identifier for each party.

CLARIFICATION: Unique, numeric identificator for each party as recorded in Party Facts' core parties dataset (D"oring and Regel 2019). In case a party changed names of scholars, sources, etc. used (slightly) different names when referring to this entity.)
RESPONSES:
Numeric
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021). For a full list of names used by a wide range of academic sources for the party in question see `https://partyfacts.herokuapp.com/data/partycodes/`.
DATA RELEASE: 10-12.

2.5.1.3 Historical Date (A) (historical_date)

Long tag: vdem_vp_coder_level_historical_date

Original tag: historical_date

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Variable designating the date for which observation is given.
CLARIFICATION: The date is coded in YYYY-MM-DD format. December 31st observation always refers to the situation at the end of the year. There can be observations on other dates signifying other events, i.e. elections or executive appointments.
RESPONSES: Numeric
NOTES: This variable is included in the V–Dem Country Year as well as Country Date datasets.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.5.1.4 Coder ID (coder_id)

Long tag: vdem_vp_coder_level_coder_id

Original tag: coder_id

Dataset citation: Lindberg et al. (2022)

Description:

Coder ID

2.5.1.5 V–Dem country ID (A) (country_id)

Long tag: vdem_vp_coder_level_country_id

Original tag: country_id

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Unique country ID designated for each country.
RESPONSES: Numeric
NOTES: For more details on country units consult the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.5.2 Party Organisation

This section lists variables related to how parties operate and are organised internally.

2.5.2.1 Local Organizational Strength (v2paactcom)

Long tag: vdem_vp_coder_level_v2paactcom

Original tag: v2paactcom

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what degree are party activists and personnel permanently active in local communities?
CLARIFICATION: Please consider the degree to which party activists and personnel are active both during election and non-election periods. Party personnel refers to paid staff.
RESPONSES:
0: There is negligible permanent presence of party activists and personnel in local communities.
1: There is minor permanent presence of party activists and personnel in local communities.
2: There is noticeable permanent presence of party activists and personnel in local communities.
3: There is significant permanent presence of party activists and personnel in local communities.
4: There is widespread permanent presence of party activists and personnel in local communities.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.2.2 Internal Cohesion (v2padisa)

Long tag: vdem_vp_coder_level_v2padisa

Original tag: v2padisa

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do the elites in this party display disagreement over party strategies?
CLARIFICATION: Party strategies include election campaign strategy, policy stance, distribution of party financial resources, cooperation with other parties (i.e. coalition formation), and the selection of legislative and presidential candidates as well as the party leader. Party elites are prominent and influential party members such as current and former ministers, members of parliament or the party leadership, regional and municipal leaders, and opinion leaders. They do not necessarily have to be the part of the official party leadership.
RESPONSES:
0: Party elites display almost complete disagreement over party strategies and many party elites have left the party.
1: Party elites display a high level of visible disagreement over party strategies and some of them have left the party.
2: Party elites display some visible disagreement over party strategies, but none of them have left the party.
3: Party elites display negligible visible disagreement over party strategies.
4: Party elites display virtually no visible disagreement over party strategies.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.2.3 Party resources (C) (v2pafunds)

Long tag: vdem_vp_coder_level_v2pafunds

Original tag: v2pafunds

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: What were the major sources of party funds for this election campaign?
CLARIFICATION: Choose up to three most important ones. If a main source of funding for this campaign
comes from the party's assets such as properties and stocks, please code where these assets originally came from.
RESPONSES:
0: Formal state subsidies for political parties. (0=No, 1=Yes) [v2pafunds_0]
1: Large-scale donations from individuals. (0=No, 1=Yes) [v2pafunds_1]
2: Large-scale donations from companies. (0=No, 1=Yes) [v2pafunds_2]
3: Large-scale donations from civil society organizations (including trade unions). (0=No, 1=Yes) [v2pafunds_3]
4: Membership fees and small-scale supporters' donations. (0=No, 1=Yes) [v2pafunds_4] 5: Informal use of state resources as incumbent party. (0=No, 1=Yes) [v2pafunds_5]
6: Funds of the party leader. (0=No, 1=Yes) [v2pafunds_6]
7: Funds of candidates. (0=No, 1=Yes) [v2pafunds_7]
SOURCE(S): Quality of Government Standard Dataset (2019).
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates.

2.5.2.4 Party support group (C) (v2pagroup)

Long tag: vdem_vp_coder_level_v2pagroup

Original tag: v2pagroup

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: To which particular group in society does the core membership and supporters of this party belong?
CLARIFICATION: Choose only the key groups. Though you may choose up to three groups, if only one
group is most relevant, please only choose that group.
RESPONSES: 0: No specific, clearly identifiable group. (0=No, 1=Yes) [v2pagroup_0]
1: The aristocracy, including high status hereditary social groups and castes. (0=No, 1=Yes) [v2pagroup_1]
2: Agrarian elites, including rich peasants and large landholders. (0=No, 1=Yes) [v2pagroup_- 2]
3: Business elites. (0=No, 1=Yes) [v2pagroup_3]
4: The military. (0=No, 1=Yes) [v2pagroup_4]
5: An ethnic or racial group(s). (0=No, 1=Yes) [v2pagroup_5]
6: A religious group(s). (0=No, 1=Yes) [v2pagroup_6]
7: Local elites, including customary chiefs. (0=No, 1=Yes) [v2pagroup_7]
8: Urban working classes, including labor unions. (0=No, 1=Yes) [v2pagroup_8]
9: Urban middle classes. (0=No, 1=Yes) [v2pagroup_9]
10: Rural working classes (e.g., peasants). (0=No, 1=Yes) [v2pagroup_10]
11: Rural middle classes (e.g., family farmers). (0=No, 1=Yes) [v2pagroup_11]
12: Regional groups or separatists. (0=No, 1=Yes) [v2pagroup_12]
13: Women. (0=No, 1=Yes) [v2pagroup_13]
14: Other specific groups. (0=No, 1=Yes) [v2pagroup_14]

DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates.

2.5.2.5 Personalization of Party (v2paind)

Long tag: vdem_vp_coder_level_v2paind

Original tag: v2paind

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent is this party a vehicle for the personal will and priorities of one individual leader?
RESPONSES:
0: The party is not focused on the personal will and priorities of one individual leader.
1: The party is occasionally focused on the personal will and priorities of one individual party leader.
2: The party is somewhat focused on the personal will and priorities of one individual party leader.
3: The party is mainly focused on the personal will and priorities of one individual party leader.
4: The party is solely focused on the personal will and priorities of one individual party leader.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.2.6 Local Party Office (v2palocoff)

Long tag: vdem_vp_coder_level_v2palocoff

Original tag: v2palocoff

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does this party maintain permanent offices that operate outside of election campaigns at the local or municipal-level?
CLARIFICATION: By "local or municipal" we mean low level administrative divisions that are ranked below regions, provinces, or states. We refer to offices that ensure professional personal and continued interaction of the party with citizens. Permanent offices operate outside of election campaigns.
RESPONSES:
0: The party does not have permanent local offices.
1: The party has permanent local offices in few municipalities.
2: The party has permanent local offices in some municipalities.
3: The party has permanent local offices in most municipalities.
4: The party has permanent local offices in all or almost all municipalities.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.2.7 Candidate Nomination (v2panom)

Long tag: vdem_vp_coder_level_v2panom

Original tag: v2panom

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Which of the following options best describes the process by which the party decides on candidates for the national legislative elections?
CLARIFICATION: If nomination procedures vary across constituencies consider the most common practice.
RESPONSES:
0: The party leader unilaterally decides on which candidates will run for the party in national legislative elections.
1: The national party leadership (i.e. an executive committee) collectively decides which candidates will run for the party in national legislative elections.
2: Delegates of local/regional organizations decide which candidates will run for the party in national legislative elections.
3: All party members decide on which candidates will run for the party in national legislative elections in primaries/caucuses.
4: All registered voters decide on which candidates will run for the party in national legislative elections in primaries/caucuses.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.2.8 Affiliate Organizations (v2pasoctie)

Long tag: vdem_vp_coder_level_v2pasoctie

Original tag: v2pasoctie

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party maintain ties to prominent social organizations?
CLARIFICATION: When evaluating the strength of ties between the party and social organizations please consider the degree to which social organizations contribute to party operations by providing material and personnel resources, propagating the party's message to its members and beyond, as well as by directly participating in the party's electoral campaign and/or mobilization efforts. Social organizations include: Religious organizations (e.g. churches, sects, charities), trade unions/syndical organizations or cooperatives, cultural and social associations (e.g. sports clubs, neighborhood associations), political associations (e.g. environmental protection) and professional and business associations. Social organizations do not include paramilitary units or militias.
RESPONSES:
0: The party does not maintain ties to any prominent social organization.
1: The party maintains weak ties to prominent social organizations.
2: The party maintains moderate ties to prominent social organizations.
3: The party maintains strong ties to prominent social organizations.
4: The party controls prominent social organizations.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3 Party Identity

This section lists variables related to party identity and ideology.

2.5.3.1 Anti-elitism (v2paanteli)

Long tag: vdem_vp_coder_level_v2paanteli

Original tag: v2paanteli

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How important is anti-elite rhetoric for this party?
CLARIFICATION: Elites are relatively small groups that have a greater say in society than others, for instance due to their political power, wealth or societal standing. The specific groups considered to be the elite may vary by country and even from party to party within the same country as do the terms used to describe them. In some cases, "elites" can also refer to an international elite.
RESPONSES:
0: Not at all important. The leadership of this party never makes statements against the elite.
1: Not important. The leadership of this party rarely makes statements against the elite.
2: Somewhat important. The leadership of this party sometimes makes statements against the elite.
3: Important. The leadership of this party often makes statements against the elite.
4: Very important. The leadership of this party makes statements against the elite whenever possible.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.2 Clientelism (v2paclient)

Long tag: vdem_vp_coder_level_v2paclient

Original tag: v2paclient

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do the party and its candidates provide targeted and excludable (clientelistic) goods and benefits - such as consumer goods, cash or preferential access to government services - in an effort to keep and gain votes?
CLARIFICATION: In some cases, parties and their candidates deliver targeted and excludable goods and benefits directly to individual voters with the explicit intention to keep or gain votes. In other cases, they rely on brokers or companies as intermediaries. In some countries, candidates promise procurement contracts or favorable regulatory decisions to companies in exchange for ensuring their workers vote for the party/candidate. Such efforts count as an instance of clientelism, if they are clearly targeted at one specific company and excludable. On the other hand, handing out of small gifts can be common in some contexts without the intention to "buy votes" but rather as courtesy or part of what all candidates do ("entry ticket"). Such activities do not count as attempts to "keep or gain votes".
RESPONSES:
0: Not at all. The party and its candidates do not provide targeted goods and benefits in order to keep and gain votes.
1: A minor extent. The party and its candidates provide targeted goods and benefits to a minor extent in order to keep and gain votes.

2: A moderate extent. The party and its candidates provide targeted goods and benefits to a moderate extent in order to keep and gain votes.
3: A large extent. The party and its candidates provide targeted goods and benefits to a sizeable extent in order to keep and gain votes.
4: As its main effort. The party and its candidates provide targeted goods and benefits to the extent that it constitutes the party's main effort in order to keep and gain votes.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.3 Cultural Superiority (v2paculsup)

Long tag: vdem_vp_coder_level_v2paculsup

Original tag: v2paculsup

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the party leadership promote the cultural superiority of a specific social group or the nation as a whole?
CLARIFICATION: This question refers to key non-economic cleavages in society, which could, for example, be based on caste, ethnicity, language, race, region, religion, or some combination thereof. This question further refers to cultural issues related to the national history and identity of a country. This question does not pertain to social groups based on gender or sexual orientation.
RESPONSES:
0: Strongly promotes. The party strongly promotes the cultural superiority of a specific social group or the nation as a whole.
1: Promotes. The party promotes the cultural superiority of a specific social group or the nation as a whole.
2: Ambiguous. The party does not take a specific position on the cultural superiority of a specific social group or the nation as a whole.
3: Opposes. The party opposes the promotion of the cultural superiority of a specific social group or the nation as a whole.
4: Strongly opposes. The party strongly opposes the promotion of the cultural superiority of a specific social group or the nation as a whole.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.4 Gender Equality (v2pagender)

Long tag: vdem_vp_coder_level_v2pagender

Original tag: v2pagender

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is the share of women in national-level leadership positions of this political party?
CLARIFICATION: This question does NOT concern the share of women in the legislature.
RESPONSES:
0: None.
1: Small minority (about 1-15percent).

2: Medium minority (about 16-25percent).
3: Large minority (about 26-39percent).
4: Balanced (about 40percent or more).
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.5 Immigration (v2paimmig)

Long tag: vdem_vp_coder_level_v2paimmig

Original tag: v2paimmig

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is the party's position regarding immigration into the country?
CLARIFICATION: Immigration refers to individuals entering the country for an indefinite, long-term or permanent period of time.
RESPONSES:
0: Strongly opposes. This party strongly opposes all or almost all forms of immigration into the country.
1: Opposes. This party opposes most forms of immigration into the country.
2: Ambiguous/No position. This party has no clear policy with regard to immigration into the country.
3: Supports. This party supports most forms of immigration into the country.
4: Strongly supports. This party strongly supports all or almost all forms of immigration into the country.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.6 LGBT Social Equality (v2palgbt)

Long tag: vdem_vp_coder_level_v2palgbt

Original tag: v2palgbt

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is this party's position toward social equality for the lesbian, gay, bisexual, and transgender (LGBT) community?
RESPONSES:
0: Strongly opposes. This party is strongly opposed to LGBT social equality.
1: Opposes. This party is opposed to LGBT social equality.
2: Ambiguous/No position. This party has no clear policy with regard to LGBT social equality.
3: Supports. This party supports LGBT social equality.
4: Strongly supports. This party strongly supports LGBT social equality.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.7 Minority Rights (v2paminor)

Long tag: vdem_vp_coder_level_v2paminor

Original tag: v2paminor

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: According to the leadership of this party, how often should the will of the majority be implemented even if doing so would violate the rights of minorities?
CLARIFICATION: This concerns the rights enshrined in the Universal Declaration of Human Rights, which apply to everyone "without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status." The declaration protects - among others - freedom of speech, property, religion, peaceful assembly and association.
RESPONSES:
0: Always. The leadership of this party argues that the will of the majority should always determine policy even if such policy violates minority rights.
1: Usually. The leadership of this party argues that the will of the majority should usually determine policy even if such policy violates minority rights.
2: Half of the time. The leadership of this party argues that the will of the majority should about half of the time determine policy even if such policy violate minority rights.
3: Usually not. The leadership of this party argues that the will of the majority should usually not determine policy if such policy violates minority rights.
4: Never. The leadership of this party argues that the will of the majority should never determine policy if such policy violates minority rights.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.8 Political Opponents (v2paopresp)

Long tag: vdem_vp_coder_level_v2paopresp

Original tag: v2paopresp

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Prior to this election, have leaders of this party used severe personal attacks or tactics of demonization against their opponents?
CLARIFICATION: Severe personal attacks and demonization includes dehumanizing opponents or describing them as an existential threat or as subversive, criminal or foreign agents.
RESPONSES:
0: Always. Party leaders always used severe personal attacks or tactics of demonization against their opponents
1: Usually. Party leaders usually used severe personal attacks or tactics of demonization against their opponents
2: About half of the time. Party leaders sometimes used severe personal attacks or tactics of demonization against their opponents.
3: Usually not. Party leaders usually did not use severe personal attacks or tactics of demonization against their opponents.
4: Never. Party leaders never used severe personal attacks or tactics of demonization against their opponents.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see

V–Dem Methodology).
DATE SPECIFIC: Election-specific dates.
CLEANING: Set to missing when there are more than two answers per coder for this question for a particular date, country, and party.

2.5.3.9 People-centrism (v2papeople)

Long tag: vdem_vp_coder_level_v2papeople

Original tag: v2papeople

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Do leaders of this party glorify the ordinary people and identify themselves as part of them?
CLARIFICATION: Many parties and leaders make reference to the "people", but only some party leaders describe the ordinary people specifically as a homogenous group and emphasize/claim that they are part of this group and represent it. This means that they do not acknowledge the existence of divergent interests and values in society, but rather suggest that the "people" have a unified political will which should guide all political action. Often this group is glorified and romanticized, describing an ideal-typical ordinary person/commoner, who embodies the national ideal.
RESPONSES:
0: Never. The party leadership never glorifies and identifies with the ordinary people.
1: Usually not. The party leadership generally does not glorify and identify with the ordinary people.
2: About half of the time. The party leadership sometimes glorifies and identifies with the ordinary people.
3: Usually. The party leadership generally glorifies and identifies with the ordinary people, which they claim to represent.
4: Always. The party leadership always glorifies and identifies with the ordinary people, which they claim to represent.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.10 Political Pluralism (v2paplur)

Long tag: vdem_vp_coder_level_v2paplur

Original tag: v2paplur

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Prior to this election, to what extent was the leadership of this political party clearly committed to free and fair elections with multiple parties, freedom of speech, media, assembly and association?
CLARIFICATION: Party leaders show no commitment to such principles if they openly support an autocratic form of government without elections or freedom of speech, assembly and association (e.g. theocracy; single-party rule; revolutionary regime). Party leaders show a full commitment to key democratic principles if they unambiguously support freedom of speech, media, assembly and association and pledge to accept defeat in free and fair elections.
RESPONSES:
0: Not at all committed. The party leadership was not at all committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.

1: Not committed. The party leadership was not committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
2: Weakly committed. The party leadership was weakly committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
3: Committed. The party leadership was committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
4: Fully committed. The party leadership was fully committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.11 Religious Principles (v2parelig)

Long tag: vdem_vp_coder_level_v2parelig

Original tag: v2parelig

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party invoke God, religion, or sacred/religious texts to justify its positions?
RESPONSES:
0: Always, or almost always. The party almost always invokes God, religion, or sacred/religious texts to justify its positions.
1: Often, but not always. The party often, but not always, invokes God, religion, or religious texts to justify its positions.
2: About half of the time. The party about half of the time invokes God, religion, or religious texts to justify its positions.
3: Rarely. The party rarely invokes God, religion, or religious texts to justify its positions.
4: Never. The party never invokes God, religion, or religious texts to justify its positions.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.12 Economic Left-Right Scale (v2pariglef)

Long tag: vdem_vp_coder_level_v2pariglef

Original tag: v2pariglef

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Please locate the party in terms of its overall ideological stance on economic issues.
CLARIFICATION: Parties on the economic left want government to play an active role in the economy. This includes higher taxes, more regulation and government spending and a more generous welfare state. Parties on the economic right emphasize a reduced economic role for government: privatization, lower taxes, less regulation, less government spending, and a leaner welfare state.
RESPONSES:
0: Far-left.
1: Left.
2: Center-left.

3: Center.
4: Center-right.
5: Right.
6: Far-right.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.13 Salience and mobilization (C) (v2pasalie)

Long tag: vdem_vp_coder_level_v2pasalie

Original tag: v2pasalie

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: Which of the following issues are most relevant for the party's effort to gain and keep voters?
CLARIFICATION: Choose only the key issue(s). Though you may choose up to three issues, if only one issue is most relevant, choose only that issue. Most of these issues have been covered in this survey; if you need additional clarification as to what a category represents, you can return to the relevant question.
RESPONSES: 0: Anti-elitism. (0=No, 1=Yes) [v2pasalie_0]
1: People-centrism. (0=No, 1=Yes) [v2pasalie_1]
2: Political pluralism (pro or contra). (0=No, 1=Yes) [v2pasalie_2]
3: Minority rights (pro or contra). (0=No, 1=Yes) [v2pasalie_3]
4: Immigration (pro or contra). (0=No, 1=Yes) [v2pasalie_4]
5: LGBT social equality (pro or contra). (0=No, 1=Yes) [v2pasalie_5]
6: Cultural superiority (pro or contra). (0=No, 1=Yes) [v2pasalie_6]
7: Religious principles (pro or contra). (0=No, 1=Yes) [v2pasalie_7]
8: Gender equality (pro or contra). (0=No, 1=Yes) [v2pasalie_8]
9: Welfare. (0=No, 1=Yes) [v2pasalie_9]
10: Economic issues (including infrastructure and taxes). (0=No, 1=Yes) [v2pasalie_10]
11: Clientelism in order to keep or gain votes (the distribution of targeted and excludable benefits towards supporters). (0=No, 1=Yes) [v2pasalie_11]
12: Environmental protection. (0=No, 1=Yes) [v2pasalie_12]
13: Farmers' issues. (0=No, 1=Yes) [v2pasalie_13]
14: The leader. (0=No, 1=Yes) [v2pasalie_14]
15: Anti-corruption. (0=No, 1=Yes) [v2pasalie_15]
16: Intimidation/violence. (0=No, 1=Yes) [v2pasalie_16]
17: Other. (0=No, 1=Yes) [v2pasalie_17]
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates

2.5.3.14 Rejection of Political Violence (v2paviol)

Long tag: vdem_vp_coder_level_v2paviol

Original tag: v2paviol

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the leadership of this party explicitly discourage the use of violence against domestic political opponents?

CLARIFICATION: "Domestic political opponents" refers to all political opponents, with the exception of those who are engaged in an armed conflict with the state. They may be other political parties or other political groups and movements.
RESPONSES:
0: Encourages. Leaders of this party often encourage the use of violence against domestic political opponents.
1: Sometimes encourages. Leaders of this party sometimes encourage the use of violence against domestic political opponents and generally refrain from discouraging it.
2: Discourages about half of the time. Leaders of this party occasionally discourage the use of violence against domestic political opponents, and do not encourage it.
3: Generally discourages. Leaders of this party often discourage the use of violence against its domestic political opponents.
4: Consistently discourages. Leaders of this party consistently reject the use of violence against its domestic political opponents.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.15 Welfare (v2pawelf)

Long tag: vdem_vp_coder_level_v2pawelf

Original tag: v2pawelf

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the party promote means-tested or universalistic welfare policies?
RESPONSES:
0: The party does not support either type of policies and opposes any public welfare policy.
1: The party solely promotes means-tested welfare policies.
2: The party mainly promotes means-tested policies, but a significant portion (e.g. 1/4 or 1/3) is universalistic and potentially benefits everyone in the population.
3: The party roughly equally supports means-tested and universalistic welfare policies.
4: The party mainly promotes universalistic policies, but a significant portion (e.g. 1/4 or 1/3) of its policies are means-tested.
5: The party solely promotes universalistic welfare policies for all groups of the society.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.3.16 Working Women (v2pawomlab)

Long tag: vdem_vp_coder_level_v2pawomlab

Original tag: v2pawomlab

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party support the equal participation of women in the labor market?
CLARIFICATION: Measures that support the equal participation of women in the labor market include - but are not limited to - legal provisions on equal treatment and pay, parental leave and financial support for child care.

RESPONSES:
0: Strongly opposes. This party strongly opposes all or almost all types of measures that support the equal participation of women in the labor market.
1: Opposes. This party opposes most types of measures that support the equal participation of women in the labor market.
2: Ambiguous/No position. This party has no clear policy with regard to measures that support the equal participation of women in the labor market.
3: Supports. This party supports most types of measures that support the equal participation of women in the labor market.
4: Strongly supports. This party strongly supports all or almost all types of measures that support the equal participation of women in the labor market.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.5.4 Party Basics

This section lists variables related to basic party information.

2.5.4.1 Party continuation (v2paelcont)

Long tag: vdem_vp_coder_level_v2paelcont

Original tag: v2paelcont

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: Did the party participate in the previous election under its current name?
CLARIFICATION: This question concerns the election prior to the one you are coding. If you choose option 2, please provide the previous party name in the comments field.
RESPONSES:
0: Yes, party participated in the previous election under the same name.
1: No, party did not participate in the previous election.
2: No, but the party participated in the previous election under a different name.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Mode
DATE SPECIFIC: Election-specific dates.

2.5.4.2 Pariah Party (v2papariah)

Long tag: vdem_vp_coder_level_v2papariah

Original tag: v2papariah

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In the years before this election, to what extent have other parties distanced themselves from this party?
RESPONSES:
0: Entirely. All other parties are unwilling to accept formal or informal parliamentary support from this party (e.g. joint legislative initiative; toleration).
1: To a great extent. One or more parties has accepted informal parliamentary support from this party (e.g. joint legislative initiative; toleration) or has signaled that it would be willing to do so. No party is willing to accept formal support from this party.
2: To some extent. One or more parties has accepted formal parliamentary support from this

party (e.g. formed a coalition) or has signaled that it would be willing to do so. Most other parties are not willing to accept informal support from this party (e.g. joint legislative initiative; toleration).
3: Not at all. One or more parties has accepted formal parliamentary support from this party (e.g. coalition) or has signaled that it would be willing to do so. Most other parties are willing to accept informal support from this party (e.g. joint legislative initiative; toleration).
NOTES: We show the following question for coding only for election years during which more than two parties won a substantial seat share (more than 5percent) in the election.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6 V-Dem V-Party v2

Dataset tag: vdem_vparty

Output Unit: V-Dem Party-Country-Year, i.e., data is collected per party, country and year. That means each row in the dataset can be identified by a party and a country in combination with a date, using the columns v2paid and historical_date. To make the party Ids more comprehensive, we also include the party name (v2paenname) in the Output Unit.

Description: The V-Party dataset includes global data on Political Parties.

2.6.1 Identifier Variables

This section lists the identifier variables in the V-Dem V-Party Dataset

2.6.1.1 Party name, English (v2paenname)

Long tag: vdem_vparty_v2paenname

Original tag: v2paenname

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Harmonized English name.
CLARIFICATION: The most common English name for this party in political science datasets as recorded in Party Facts' core parties (Döring and Regel 2019).
RESPONSES:
Text
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021). For a full list of names used by a wide range of academic sources for the party in question see `https://partyfacts.herokuapp.com/data/partycodes/`.
DATA RELEASE: 10-12.

2.6.1.2 Party name, Original (v2paorname)

Long tag: vdem_vparty_v2paorname

Original tag: v2paorname

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Harmonized original party name
CLARIFICATION: The most common original name for this party in political science datasets as recorded in Party Facts' core parties (Döring and Regel 2019).
RESPONSES:
Text
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021). For a full list of names used by a wide range of academic sources for the party in question see `https://partyfacts.herokuapp.com/data/partycodes/`.
DATA RELEASE: 10-12.

2.6.1.3 Party short name (v2pashname)

Long tag: vdem_vparty_v2pashname

Original tag: v2pashname

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Harmonized short name
CLARIFICATION: Harmonized short name.
RESPONSES:
Text
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021). For a full list of names used by a wide range of academic sources for the party in question see `https://partyfacts.herokuapp.com/data/partycodes/`.
DATA RELEASE: 10-12.

2.6.1.4 Numeric party identifier (v2paid)

Long tag: vdem_vparty_v2paid

Original tag: v2paid

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Unique identifier for each party.
CLARIFICATION: Unique, numeric identificator for each party as recorded in Party Facts' core parties dataset (D"oring and Regel 2019). In case a party changed names of scholars, sources, etc. used (slightly) different names when referring to this entity.)
RESPONSES:
Numeric
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021). For a full list of names used by a wide range of academic sources for the party in question see `https://partyfacts.herokuapp.com/data/partycodes/`.
DATA RELEASE: 10-12.

2.6.1.5 Party Facts ID (A) (pf_party_id)

Long tag: vdem_vparty_pf_party_id

Original tag: pf_party_id

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Party Facts ID
SCALE: Numeric
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021).
DATA RELEASE: 10-12.

2.6.1.6 Start and end year of gap in party coding (A) (party_gaps)

Long tag: vdem_vparty_party_gaps

Original tag: party_gaps

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: The starting and ending year in which the party was out of national legislature.
CLARIFICATION: The default format is *YYYY–YYYY*. Several time spans can be listed in this manner and are separated by comma. The starting year indicates the first year after the available election year for a party. The ending gap year is specified as the last year before available election for the party in question.
RESPONSES:
Text
DATA RELEASE: 10-12.

2.6.1.7 Party Facts URL (A) (pf_url)

Long tag: vdem_vparty_pf_url

Original tag: pf_url

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: URL to party's webpage at Party Facts website
SCALE: Text
SOURCE(S): Party Facts (Döring and Regel 2019; Bederke 2021).

DATA RELEASE: 10-12.

2.6.1.8 Country name (country_name)

Long tag: vdem_vparty_country_name

Original tag: country_name

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Name of coded country.
CLARIFICATION: A V–Dem country is a political unit enjoying at least some degree of functional and/or
formal sovereignty.
RESPONSES: Text
NOTES: For more details on country units consult the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.9 Time–Specific Country Name (histname)

Long tag: vdem_vparty_histname

Original tag: histname

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Name of coded country at different dates.
RESPONSES: Text
ANSWER-TYPE: Text
NOTES: For more details on country units consult the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.10 V–Dem country ID (A) (country_id)

Long tag: vdem_vparty_country_id

Original tag: country_id

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A*
QUESTION: Unique country ID designated for each country.
RESPONSES: Numeric
NOTES: For more details on country units consult the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.11 Country name abbreviation (A*) (country_text_id)

Long tag: vdem_vparty_country_text_id

Original tag: country_text_id

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A*
QUESTION: Abbreviated country names.
RESPONSES: Text
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.12 Year (A) (year)

Long tag: vdem_vparty_year

Original tag: year

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A*
QUESTION: Four–digit designation of the year for which an observation is given that ranges from the start to the end of the coding period.
RESPONSES: Numeric
NOTES: For more details on country units consult the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.13 Historical Date (A) (historical_date)

Long tag: vdem_vparty_historical_date

Original tag: historical_date

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A*
QUESTION: Variable designating the date for which observation is given.
CLARIFICATION: The date is coded in YYYY-MM-DD format. December 31st observation always refers to the situation at the end of the year. There can be observations on other dates signifying other events, i.e. elections or executive appointments.
RESPONSES: Numeric
NOTES: This variable is included in the V–Dem Country Year as well as Country Date datasets.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.14 Start of coding period (A) (codingstart)

Long tag: vdem_vparty_codingstart

Original tag: codingstart

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: Year in which coding of the country in question starts.
CLARIFICATION: V–Dem country coding starts in 1789, or from when a country first enjoyed at least
some degree of functional and/or formal sovereignty.

RESPONSES: Numeric
NOTES: For detailed information, please see the V–Dem Country Coding Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.15 Gap in coding period starts (A) (gapstart)

Long tag: vdem_vparty_gapstart

Original tag: gapstart

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: The starting year in which country in question does not conform to V-Dem definition of an independent state in between the starting and ending year of coding.
CLARIFICATION: Year that indicates the gap start is the last date coded before the gap.
RESPONSES:
Numeric
NOTES: For more details about V–Dem country coding periods, please see the V–Dem Country Coding
Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.16 Gap in coding period ends (A) (gapend)

Long tag: vdem_vparty_gapend

Original tag: gapend

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:
VARIABLE TYPE: A*
QUESTION: The ending year in which country in question does not conform to V-Dem definition of an independent state in between the starting and ending year of coding.
CLARIFICATION: Year that indicates the gap end is the last date coded after the gap.
RESPONSES:
Numeric
NOTES: For more details about V–Dem country coding periods, please see the V–Dem Country Coding
Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.17 End of coding period (A) (codingend)

Long tag: vdem_vparty_codingend

Original tag: codingend

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Either a maximum year of country coding period or the year when the country ceased to exist because it lost functional or formal sovereignty.
RESPONSES:
Numeric
NOTES: For more details about V–Dem country coding periods, please see the V–Dem Country Coding
Units document.
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.18 V-Dem Project (project)

Long tag: vdem_vparty_project

Original tag: project

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
QUESTION: Indication what project team has coded country in respective year.
RESPONSES:
0: Contemporary.
1: Historical.
2: Both (overlap).
DATA RELEASE: 1-2.
CITATION: V-Dem Codebook

2.6.1.19 COW Country Code (E) (cowcode)

Long tag: vdem_vparty_cowcode

Original tag: COWcode

Dataset citation: Lindberg et al. (2022)

Variable citation: Correlates of War Project (2017)

Description:

VARIABLE TYPE: E
QUESTION: Correlates of War (COW) project country codes.
RESPONSES: Numeric
SOURCE(S): Correlates of War Project (2017)
DATA RELEASE: 1-2.
CITATION: Correlates of War Project (2017)
YEARS: 1789-2020

2.6.1.20 Gap index (A) (gap_index)

Long tag: vdem_vparty_gap_index

Original tag: gap_index

Dataset citation: Lindberg et al. (2022)

Variable citation: Coppedge, Gerring, Knutsen, Lindberg, Teorell, Altman, Angiolillo, Bernhard, Cornell, Fish, Fox, Gastaldi, Gjerløw, Glynn, Good God, Hicken, Kinzelbach, Marquardt, McMann, Mechkova, Neundorf, Paxton, Pemstein, Pernes, von Römer, Sigman, Skaaning, Staton, Sundström, Tannenberg, Tzelgov, Wang, Wig, Wilson & Ziblatt (2026)

Description:

VARIABLE TYPE: A*
CLARIFICATION: Indication that party was not present in national legislature.
RESPONSES: Numeric
DATA RELEASE: 2.

2.6.1.21 CHES Party Code (E) (ches_id)

Long tag: vdem_vparty_ches_id

Original tag: CHES_ID

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: Unique identifier for each party from Chapel Hill Expert Survey (CHES).
RESPONSES:
Numeric
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.1.22 Region (geographic) (E) (e_regiongeo)

Long tag: vdem_vparty_e_regiongeo

Original tag: e_regiongeo

Dataset citation: Lindberg et al. (2022)

Variable citation: United Nations Statistics Division (2013)

Description:

VARIABLE TYPE: E
QUESTION: In which geographic region is this country located?
CLARIFICATION: Regions are described based on geographic location.
RESPONSES:
1: Western Europe
2: Northern Europe
3: Southern Europe
4: Eastern Europe
5: Northern Africa
6: Western Africa
7: Middle Africa
8: Eastern Africa
9: Southern Africa
10: Western Asia
11: Central Asia
12: Eastern Asia
13: South-Eastern Asia
14: Southern Asia
15: Oceania (including Australia and the Pacific)
16: North America
17: Central America
18: South America

19: Caribbean (including Belize, Cuba, Haiti, Dominican Republic and Guyana)
SOURCE(S): United Nations Statistics Division (2013).
NOTES: For the countries coded only in the historical project or for which the UN does not have the code, the region is coded by V-Dem Data Manager in accordance with the position of the neighboring countries.
DATA RELEASE: 1-2.
YEARS: 1789-2020

2.6.1.23 Region (politico-geographic) (E) (e_regionpol)

Long tag: vdem_vparty_e_regionpol

Original tag: e_regionpol

Dataset citation: Lindberg et al. (2022)

Variable citation: Teorell et al. (2024)

Description:

VARIABLE TYPE: E
QUESTION: WIn which politico-geographic region is this country located?
RESPONSES:
1: Eastern Europe and post Soviet Union (including Central Asia, Mongolia, and German Democratic Republic)
2: Latin America (including Cuba, Haiti, and the Dominican Republic)
3: North Africa and the Middle East (including Israel and Turkey, but excluding Cyprus)
4: Sub–Saharan Africa
5: Western Europe and North America (including Australia, New Zealand, and Cyprus, but excluding German Democratic Republic)
6: Eastern Asia (including Japan, excluding Mongolia)
7: South–Eastern Asia
8: Southern Asia
9: The Pacific (excluding Australia and New Zealand)
10: The Caribbean (including Guyana and Suriname, but excluding Cuba, Haiti, and the Dominican Republic)
SOURCE(S): Quality of Government Standard Dataset (2019).
DATA RELEASE: 1-2.
CITATION: Teorell et al. (2018).
YEARS: 1789-2020

2.6.1.24 Region (politico-geographic 6-category) (E) (e_regionpol_6c)

Long tag: vdem_vparty_e_regionpol_6c

Original tag: e_regionpol_6C

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: E
QUESTION: In which politico-geographic region is this country located?
CLARIFICATION: This is a tenfold politico-geographic classification of world regions, based on a mixture
of two considerations: geographical proximity (with Cyprus, German Democratic Republic, and Mongolia being recoded from original coding) and demarcation by area specialists having contributed to a regional understanding of democratization. The categories are as follow:
RESPONSES: 1: Eastern Europe and post Soviet Union (including Central Asia, Mongolia, and German Democratic Republic)
2: Latin America (including Cuba, Haiti, and the Dominican Republic)
3: North Africa and the Middle East (including Israel and Turkey, but excluding Cyprus)
4: Sub–Saharan Africa
5: Western Europe and North America (including Australia, New Zealand, and Cyprus, but excluding German Democratic Republic)

6: Eastern Asia (including Japan, excluding Mongolia)
7: South–Eastern Asia
8: Southern Asia
9: The Pacific (excluding Australia and New Zealand)
10: The Caribbean (including Guyana and Suriname, but excluding Cuba, Haiti, and the Dominican Republic)
DATA RELEASE: 1-2.
CITATION: Teorell et al. (2018).
YEARS: 1789-2020

2.6.1.25 GPS Party Code (E) (gps_id)

Long tag: vdem_vparty_gps_id

Original tag: GPS_ID

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: Unique numeric code for each party in the Global Party Survey (GPS) dataset.
RESPONSES: Numeric
SOURCE(S): Norris (2020).
DATA RELEASE: 1-2.
CITATION: Norris (2020).

2.6.2 Indices

This section lists variables related to indices.

2.6.2.1 Anti-Pluralism Index (D) (v2xpa_antiplural)

Long tag: vdem_vparty_v2xpa_antiplural

Original tag: v2xpa_antiplural

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
ADDITIONAL VERSIONS: *_codelow, *_codehigh
QUESTION: To what extent does the party show a lacking commitment to democratic norms prior to elections?
SCALE: Interval, from low to high (0-1)
SOURCE(S): v2paopresp v2paplur v2paminor v2paviol
DATA RELEASE: 10-12.
AGGREGATION: The index is computed as a transformed weighted average of the input variables using the following formula:

$$\text{v2xpa_antiplural}_i = 1 - \Phi\left(\frac{0.5 * \text{v2paopresp}_i + 2 * \text{v2paplur}_i + \text{v2paminor}_i + \text{v2paviol}_i}{4.5}\right),$$

where i indexes observations and Φ is the standard normal cummulative density function. For each observation, the posterior distribution of the index is obtained by computing the value of the index for each draw from the posterior distributions of v2paopresp_i, v2paplur_i, v2paminor_i and v2paviol_i, and then summarized.

2.6.2.2 Populism Index (D) (v2xpa_popul)

Long tag: vdem_vparty_v2xpa_popul

Original tag: v2xpa_popul

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
ADDITIONAL VERSIONS: *_codelow, *_codehigh
QUESTION: To what extent do representatives of the party use populist rhetoric (narrowly defined)?
SCALE: Interval, from low to high (0-1)
SOURCE(S): v2paanteli v2papeople
DATA RELEASE: 10-12.
AGGREGATION: The index is computed as the harmonic mean of rescaled v2paanteli_osp and v2papeople_osp posterior distributions, using the following formula:

$$\text{v2xpa_popul}_i = \frac{2}{\frac{1}{x_i} + \frac{1}{y_i}},$$

where i indexes each observation,

$$x_i = \frac{1}{4}\text{v2paanteli_osp}_i,$$

and

$$y_i = \frac{1}{4}\text{v2papeople_osp}_i.$$

For each observation, the posterior distribution of the index is obtained by computing the value of the index for each draw from the posterior distributions of v2paanteli_osp_i and v2papeople_osp_i, and then summarized.

2.6.3 Party Basics

This section lists variables related to basic party information.

2.6.3.1 Seat share (v2paseatshare)

Long tag: vdem_vparty_v2paseatshare

Original tag: v2paseatshare

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A
QUESTION: Seat share the party gained in the election to the lower chamber.
RESPONSES:
Numeric
SOURCE(S): Döring and Düpont (2020).
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.

2.6.3.2 Seat number (v2panumbseat)

Long tag: vdem_vparty_v2panumbseat

Original tag: v2panumbseat

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A
QUESTION: Number of seats the party gained in the election to the lower chamber.
RESPONSES:
Numeric
SOURCE(S): Döring and Düpont (2020).

DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.

2.6.3.3 Seats total (v2patotalseat)

Long tag: vdem_vparty_v2patotalseat

Original tag: v2patotalseat

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A
QUESTION: Total number of seats in the lower chamber.
RESPONSES:
Numeric
SOURCE(S): Döring and Düpont (2020).
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.

2.6.3.4 Vote share (v2pavote)

Long tag: vdem_vparty_v2pavote

Original tag: v2pavote

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A
QUESTION: Vote share the party gained in the election to the lower chamber.
RESPONSES:
Numeric
SOURCE(S): Döring and Düpont (2020).
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.

2.6.3.5 Temporary pre-electoral alliance (v2paallian)

Long tag: vdem_vparty_v2paallian

Original tag: v2paallian

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A
QUESTION: Was the party part of a temporary pre-electoral alliance in this national election or is the entity actually an alliance?
RESPONSES:
0: No.
1: Yes, party was part of an alliance.
2: Yes, entity is an alliance of two or more parties.
SOURCE(S): Döring and Düpont (2020).
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.

2.6.3.6 Name of temporary pre-electoral alliance (v2panaallian)

Long tag: vdem_vparty_v2panaallian

Original tag: v2panaallian

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A
QUESTION: If the party was part of a temporary pre-electoral temporary alliance, what was the name of that alliance?
RESPONSES:
Text
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.
CLEANING: Set to missing where v2paallian is 0.

2.6.3.7 Vote share of temporary pre-electoral alliance (v2pavallian)

Long tag: vdem_vparty_v2pavallian

Original tag: v2pavallian

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A
QUESTION: If the party was part of a temporary pre-electoral temporary alliance, what was the vote share of the alliance?
RESPONSES:
Numeric
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.
CLEANING: Set to missing where v2paallian is 0.

2.6.3.8 Seats of temporary pre-electoral alliance (v2panoallian)

Long tag: vdem_vparty_v2panoallian

Original tag: v2panoallian

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: A
QUESTION: If the party was part of a temporary pre-electoral temporary alliance, how many seats did the alliance gain?
RESPONSES:
Numeric
DATA RELEASE: 10-12.
DATE SPECIFIC: Election-specific dates.
CLEANING: Set to missing where v2paallian is 0.

2.6.3.9 Party continuation (v2paelcont)

Long tag: vdem_vparty_v2paelcont

Original tag: v2paelcont

Dataset citation: Lindberg et al. (2022)

Description:
VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: Did the party participate in the previous election under its current name?
CLARIFICATION: This question concerns the election prior to the one you are coding. If you choose option 2, please provide the previous party name in the comments field.
RESPONSES:
0: Yes, party participated in the previous election under the same name.
1: No, party did not participate in the previous election.
2: No, but the party participated in the previous election under a different name.

DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Mode
DATE SPECIFIC: Election-specific dates.

2.6.3.10 Party continuation (C) (v2paelcont_nr)

Long tag: vdem_vparty_v2paelcont_nr

Original tag: v2paelcont_nr

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: Did the party participate in the previous election under its current name?
RESPONSES: 0: Yes, party participated in the previous election under the same name.
1: No, party did not participate in the previous election.
2: No, but the party participated in the previous election under a different name.
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mode
DATE SPECIFIC: Election-specific dates.

2.6.3.11 Government support (v2pagovsup)

Long tag: vdem_vparty_v2pagovsup

Original tag: v2pagovsup

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: A,C
QUESTION: Does this party support the government formed immediately after this election?
CLARIFICATION: This question refers to the initial support, by the party, of the first government formed based on this election. It does not include caretaker cabinets that are in office until the first cabinet forms.
RESPONSES:
0: Yes, as senior partner. The Head of Government belongs to this party.
1: Yes, as junior partner. The Head of Government does not belong to this party, but one or more cabinet ministers do.
2: Yes, but the party is not officially represented in government.
3: No, party is in opposition to the government.
4: Not applicable. No government took office based on this election (yet).
NOTES: The data collected using expert survey and aggregated by mode was cross–checked by a research assistant.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Mode
DATE SPECIFIC: Election-specific dates.

2.6.3.12 Pariah Party (v2papariah)

Long tag: vdem_vparty_v2papariah

Original tag: v2papariah

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: In the years before this election, to what extent have other parties distanced themselves from this party?
RESPONSES:

0: Entirely. All other parties are unwilling to accept formal or informal parliamentary support from this party (e.g. joint legislative initiative; toleration).
1: To a great extent. One or more parties has accepted informal parliamentary support from this party (e.g. joint legislative initiative; toleration) or has signaled that it would be willing to do so. No party is willing to accept formal support from this party.
2: To some extent. One or more parties has accepted formal parliamentary support from this party (e.g. formed a coalition) or has signaled that it would be willing to do so. Most other parties are not willing to accept informal support from this party (e.g. joint legislative initiative; toleration).
3: Not at all. One or more parties has accepted formal parliamentary support from this party (e.g. coalition) or has signaled that it would be willing to do so. Most other parties are willing to accept informal support from this party (e.g. joint legislative initiative; toleration).
NOTES: We show the following question for coding only for election years during which more than two parties won a substantial seat share (more than 5percent) in the election.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4 Party Identity

This section lists variables related to party identity and ideology.

2.6.4.1 Anti-elitism (v2paanteli)

Long tag: vdem_vparty_v2paanteli

Original tag: v2paanteli

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: How important is anti-elite rhetoric for this party?
CLARIFICATION: Elites are relatively small groups that have a greater say in society than others, for instance due to their political power, wealth or societal standing. The specific groups considered to be the elite may vary by country and even from party to party within the same country as do the terms used to describe them. In some cases, "elites" can also refer to an international elite.
RESPONSES:
0: Not at all important. The leadership of this party never makes statements against the elite.
1: Not important. The leadership of this party rarely makes statements against the elite.
2: Somewhat important. The leadership of this party sometimes makes statements against the elite.
3: Important. The leadership of this party often makes statements against the elite.
4: Very important. The leadership of this party makes statements against the elite whenever possible.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.2 People-centrism (v2papeople)

Long tag: vdem_vparty_v2papeople

Original tag: v2papeople

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Do leaders of this party glorify the ordinary people and identify themselves as part of them?
CLARIFICATION: Many parties and leaders make reference to the "people", but only some party leaders describe the ordinary people specifically as a homogenous group and emphasize/claim that they are part of this group and represent it. This means that they do not acknowledge the existence of divergent interests and values in society, but rather suggest that the "people" have a unified political will which should guide all political action. Often this group is glorified and romanticized, describing an ideal-typical ordinary person/commoner, who embodies the national ideal.
RESPONSES:
0: Never. The party leadership never glorifies and identifies with the ordinary people.
1: Usually not. The party leadership generally does not glorify and identify with the ordinary people.
2: About half of the time. The party leadership sometimes glorifies and identifies with the ordinary people.
3: Usually. The party leadership generally glorifies and identifies with the ordinary people, which they claim to represent.
4: Always. The party leadership always glorifies and identifies with the ordinary people, which they claim to represent.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.3 Political Opponents (v2paopresp)

Long tag: vdem_vparty_v2paopresp

Original tag: v2paopresp

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Prior to this election, have leaders of this party used severe personal attacks or tactics of demonization against their opponents?
CLARIFICATION: Severe personal attacks and demonization includes dehumanizing opponents or describing them as an existential threat or as subversive, criminal or foreign agents.
RESPONSES:
0: Always. Party leaders always used severe personal attacks or tactics of demonization against their opponents
1: Usually. Party leaders usually used severe personal attacks or tactics of demonization against their opponents
2: About half of the time. Party leaders sometimes used severe personal attacks or tactics of demonization against their opponents.
3: Usually not. Party leaders usually did not use severe personal attacks or tactics of demonization against their opponents.
4: Never. Party leaders never used severe personal attacks or tactics of demonization against their opponents.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.
CLEANING: Set to missing when there are more than two answers per coder for this question for a particular date, country, and party.

2.6.4.4 Political Pluralism (v2paplur)

Long tag: vdem_vparty_v2paplur

Original tag: v2paplur

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Prior to this election, to what extent was the leadership of this political party clearly committed to free and fair elections with multiple parties, freedom of speech, media, assembly and association?
CLARIFICATION: Party leaders show no commitment to such principles if they openly support an autocratic form of government without elections or freedom of speech, assembly and association (e.g. theocracy; single-party rule; revolutionary regime). Party leaders show a full commitment to key democratic principles if they unambiguously support freedom of speech, media, assembly and association and pledge to accept defeat in free and fair elections.
RESPONSES:
0: Not at all committed. The party leadership was not at all committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
1: Not committed. The party leadership was not committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
2: Weakly committed. The party leadership was weakly committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
3: Committed. The party leadership was committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
4: Fully committed. The party leadership was fully committed to free and fair, multi-party elections, freedom of speech, media, assembly and association.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.5 Minority Rights (v2paminor)

Long tag: vdem_vparty_v2paminor

Original tag: v2paminor

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: According to the leadership of this party, how often should the will of the majority be implemented even if doing so would violate the rights of minorities?
CLARIFICATION: This concerns the rights enshrined in the Universal Declaration of Human Rights, which apply to everyone "without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status." The declaration protects - among others - freedom of speech, property, religion, peaceful assembly and association.
RESPONSES:
0: Always. The leadership of this party argues that the will of the majority should always determine policy even if such policy violates minority rights.
1: Usually. The leadership of this party argues that the will of the majority should usually determine policy even if such policy violates minority rights.
2: Half of the time. The leadership of this party argues that the will of the majority should about half of the time determine policy even if such policy violate minority rights.
3: Usually not. The leadership of this party argues that the will of the majority should

usually not determine policy if such policy violates minority rights.
4: Never. The leadership of this party argues that the will of the majority should never determine policy if such policy violates minority rights.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.6 Rejection of Political Violence (v2paviol)

Long tag: vdem_vparty_v2paviol

Original tag: v2paviol

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the leadership of this party explicitly discourage the use of violence against domestic political opponents?
CLARIFICATION: "Domestic political opponents" refers to all political opponents, with the exception of those who are engaged in an armed conflict with the state. They may be other political parties or other political groups and movements.
RESPONSES:
0: Encourages. Leaders of this party often encourage the use of violence against domestic political opponents.
1: Sometimes encourages. Leaders of this party sometimes encourage the use of violence against domestic political opponents and generally refrain from discouraging it.
2: Discourages about half of the time. Leaders of this party occasionally discourage the use of violence against domestic political opponents, and do not encourage it.
3: Generally discourages. Leaders of this party often discourage the use of violence against its domestic political opponents.
4: Consistently discourages. Leaders of this party consistently reject the use of violence against its domestic political opponents.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.7 Immigration (v2paimmig)

Long tag: vdem_vparty_v2paimmig

Original tag: v2paimmig

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is the party's position regarding immigration into the country?
CLARIFICATION: Immigration refers to individuals entering the country for an indefinite, long-term or permanent period of time.
RESPONSES:
0: Strongly opposes. This party strongly opposes all or almost all forms of immigration into the country.
1: Opposes. This party opposes most forms of immigration into the country.
2: Ambiguous/No position. This party has no clear policy with regard to immigration into the country.
3: Supports. This party supports most forms of immigration into the country.
4: Strongly supports. This party strongly supports all or almost all forms of immigration into

the country.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.8 LGBT Social Equality (v2palgbt)

Long tag: vdem_vparty_v2palgbt

Original tag: v2palgbt

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is this party's position toward social equality for the lesbian, gay, bisexual, and transgender (LGBT) community?
RESPONSES:
0: Strongly opposes. This party is strongly opposed to LGBT social equality.
1: Opposes. This party is opposed to LGBT social equality.
2: Ambiguous/No position. This party has no clear policy with regard to LGBT social equality.
3: Supports. This party supports LGBT social equality.
4: Strongly supports. This party strongly supports LGBT social equality.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.9 Cultural Superiority (v2paculsup)

Long tag: vdem_vparty_v2paculsup

Original tag: v2paculsup

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the party leadership promote the cultural superiority of a specific social group or the nation as a whole?
CLARIFICATION: This question refers to key non-economic cleavages in society, which could, for example, be based on caste, ethnicity, language, race, region, religion, or some combination thereof. This question further refers to cultural issues related to the national history and identity of a country. This question does not pertain to social groups based on gender or sexual orientation.
RESPONSES:
0: Strongly promotes. The party strongly promotes the cultural superiority of a specific social group or the nation as a whole.
1: Promotes. The party promotes the cultural superiority of a specific social group or the nation as a whole.
2: Ambiguous. The party does not take a specific position on the cultural superiority of a specific social group or the nation as a whole.
3: Opposes. The party opposes the promotion of the cultural superiority of a specific social group or the nation as a whole.
4: Strongly opposes. The party strongly opposes the promotion of the cultural superiority of a specific social group or the nation as a whole.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see

V–Dem Methodology).
DATE SPECIFIC: Election-specific dates.

2.6.4.10 Religious Principles (v2parelig)

Long tag: vdem_vparty_v2parelig

Original tag: v2parelig

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party invoke God, religion, or sacred/religious texts to justify its positions?
RESPONSES:
0: Always, or almost always. The party almost always invokes God, religion, or sacred/religious texts to justify its positions.
1: Often, but not always. The party often, but not always, invokes God, religion, or religious texts to justify its positions.
2: About half of the time. The party about half of the time invokes God, religion, or religious texts to justify its positions.
3: Rarely. The party rarely invokes God, religion, or religious texts to justify its positions.
4: Never. The party never invokes God, religion, or religious texts to justify its positions.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.11 Gender Equality (v2pagender)

Long tag: vdem_vparty_v2pagender

Original tag: v2pagender

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: What is the share of women in national-level leadership positions of this political party?
CLARIFICATION: This question does NOT concern the share of women in the legislature.
RESPONSES:
0: None.
1: Small minority (about 1-15percent).
2: Medium minority (about 16-25percent).
3: Large minority (about 26-39percent).
4: Balanced (about 40percent or more).
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.12 Working Women (v2pawomlab)

Long tag: vdem_vparty_v2pawomlab

Original tag: v2pawomlab

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party support the equal participation of women in the labor market?
CLARIFICATION: Measures that support the equal participation of women in the labor market include - but are not limited to - legal provisions on equal treatment and pay, parental leave and financial support for child care.
RESPONSES:
0: Strongly opposes. This party strongly opposes all or almost all types of measures that support the equal participation of women in the labor market.
1: Opposes. This party opposes most types of measures that support the equal participation of women in the labor market.
2: Ambiguous/No position. This party has no clear policy with regard to measures that support the equal participation of women in the labor market.
3: Supports. This party supports most types of measures that support the equal participation of women in the labor market.
4: Strongly supports. This party strongly supports all or almost all types of measures that support the equal participation of women in the labor market.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.13 Economic Left-Right Scale (v2pariglef)

Long tag: vdem_vparty_v2pariglef

Original tag: v2pariglef

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Please locate the party in terms of its overall ideological stance on economic issues.
CLARIFICATION: Parties on the economic left want government to play an active role in the economy. This includes higher taxes, more regulation and government spending and a more generous welfare state. Parties on the economic right emphasize a reduced economic role for government: privatization, lower taxes, less regulation, less government spending, and a leaner welfare state.
RESPONSES:
0: Far-left.
1: Left.
2: Center-left.
3: Center.
4: Center-right.
5: Right.
6: Far-right.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.14 Welfare (v2pawelf)

Long tag: vdem_vparty_v2pawelf

Original tag: v2pawelf

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does the party promote means-tested or universalistic welfare policies?
RESPONSES:
0: The party does not support either type of policies and opposes any public welfare policy.
1: The party solely promotes means-tested welfare policies.
2: The party mainly promotes means-tested policies, but a significant portion (e.g. 1/4 or 1/3) is universalistic and potentially benefits everyone in the population.
3: The party roughly equally supports means-tested and universalistic welfare policies.
4: The party mainly promotes universalistic policies, but a significant portion (e.g. 1/4 or 1/3) of its policies are means-tested.
5: The party solely promotes universalistic welfare policies for all groups of the society.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.15 Clientelism (v2paclient)

Long tag: vdem_vparty_v2paclient

Original tag: v2paclient

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do the party and its candidates provide targeted and excludable (clientelistic) goods and benefits - such as consumer goods, cash or preferential access to government services - in an effort to keep and gain votes?
CLARIFICATION: In some cases, parties and their candidates deliver targeted and excludable goods and benefits directly to individual voters with the explicit intention to keep or gain votes. In other cases, they rely on brokers or companies as intermediaries. In some countries, candidates promise procurement contracts or favorable regulatory decisions to companies in exchange for ensuring their workers vote for the party/candidate. Such efforts count as an instance of clientelism, if they are clearly targeted at one specific company and excludable. On the other hand, handing out of small gifts can be common in some contexts without the intention to "buy votes" but rather as courtesy or part of what all candidates do ("entry ticket"). Such activities do not count as attempts to "keep or gain votes".
RESPONSES:
0: Not at all. The party and its candidates do not provide targeted goods and benefits in order to keep and gain votes.
1: A minor extent. The party and its candidates provide targeted goods and benefits to a minor extent in order to keep and gain votes.
2: A moderate extent. The party and its candidates provide targeted goods and benefits to a moderate extent in order to keep and gain votes.
3: A large extent. The party and its candidates provide targeted goods and benefits to a sizeable extent in order to keep and gain votes.
4: As its main effort. The party and its candidates provide targeted goods and benefits to the extent that it constitutes the party's main effort in order to keep and gain votes.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.4.16 Salience and Mobilization (v2pasalie_nr)

Long tag: vdem_vparty_v2pasalie_nr

Original tag: v2pasalie_nr

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: Which of the following issues are most relevant for the party's effort to gain and keep voters?
CLARIFICATION: Choose only the key issue(s). Though you may choose up to three issues, if only one issue is most relevant, choose only that issue. Most of these issues have been covered in this survey; if you need additional clarification as to what a category represents, you can return to the relevant question.
RESPONSES: 0: Anti-elitism. (0=No, 1=Yes) [v2pasalie_0]
1: People-centrism. (0=No, 1=Yes) [v2pasalie_1]
2: Political pluralism (pro or contra). (0=No, 1=Yes) [v2pasalie_2]
3: Minority rights (pro or contra). (0=No, 1=Yes) [v2pasalie_3]
4: Immigration (pro or contra). (0=No, 1=Yes) [v2pasalie_4]
5: LGBT social equality (pro or contra). (0=No, 1=Yes) [v2pasalie_5]
6: Cultural superiority (pro or contra). (0=No, 1=Yes) [v2pasalie_6]
7: Religious principles (pro or contra). (0=No, 1=Yes) [v2pasalie_7]
8: Gender equality (pro or contra). (0=No, 1=Yes) [v2pasalie_8]
9: Welfare. (0=No, 1=Yes) [v2pasalie_9]
10: Economic issues (including infrastructure and taxes). (0=No, 1=Yes) [v2pasalie_10]
11: Clientelism in order to keep or gain votes (the distribution of targeted and excludable benefits towards supporters). (0=No, 1=Yes) [v2pasalie_11]
12: Environmental protection. (0=No, 1=Yes) [v2pasalie_12]
13: Farmers' issues. (0=No, 1=Yes) [v2pasalie_13]
14: The leader. (0=No, 1=Yes) [v2pasalie_14]
15: Anti-corruption. (0=No, 1=Yes) [v2pasalie_15]
16: Intimidation/violence. (0=No, 1=Yes) [v2pasalie_16]
17: Other. (0=No, 1=Yes) [v2pasalie_17]
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates

2.6.5 Party Organisation

This section lists variables related to how parties operate and are organised internally.

2.6.5.1 Local Party Office (v2palocoff)

Long tag: vdem_vparty_v2palocoff

Original tag: v2palocoff

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Does this party maintain permanent offices that operate outside of election campaigns at the local or municipal-level?
CLARIFICATION: By "local or municipal" we mean low level administrative divisions that are ranked below regions, provinces, or states. We refer to offices that ensure professional personal and continued interaction of the party with citizens. Permanent offices operate outside of election campaigns.
RESPONSES:
0: The party does not have permanent local offices.

1: The party has permanent local offices in few municipalities.
2: The party has permanent local offices in some municipalities.
3: The party has permanent local offices in most municipalities.
4: The party has permanent local offices in all or almost all municipalities.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.2 Local Organizational Strength (v2paactcom)

Long tag: vdem_vparty_v2paactcom

Original tag: v2paactcom

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what degree are party activists and personnel permanently active in local communities?
CLARIFICATION: Please consider the degree to which party activists and personnel are active both during election and non-election periods. Party personnel refers to paid staff.
RESPONSES:
0: There is negligible permanent presence of party activists and personnel in local communities.
1: There is minor permanent presence of party activists and personnel in local communities.
2: There is noticeable permanent presence of party activists and personnel in local communities.
3: There is significant permanent presence of party activists and personnel in local communities.
4: There is widespread permanent presence of party activists and personnel in local communities.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.3 Affiliate Organizations (v2pasoctie)

Long tag: vdem_vparty_v2pasoctie

Original tag: v2pasoctie

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent does this party maintain ties to prominent social organizations?
CLARIFICATION: When evaluating the strength of ties between the party and social organizations please consider the degree to which social organizations contribute to party operations by providing material and personnel resources, propagating the party's message to its members and beyond, as well as by directly participating in the party's electoral campaign and/or mobilization efforts. Social organizations include: Religious organizations (e.g. churches, sects, charities), trade unions/syndical organizations or cooperatives, cultural and social associations (e.g. sports clubs, neighborhood associations), political associations (e.g. environmental protection) and professional and business associations. Social organizations do not include paramilitary units or militias.
RESPONSES:
0: The party does not maintain ties to any prominent social organization.

1: The party maintains weak ties to prominent social organizations.
2: The party maintains moderate ties to prominent social organizations.
3: The party maintains strong ties to prominent social organizations.
4: The party controls prominent social organizations.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.4 Candidate Nomination (v2panom)

Long tag: vdem_vparty_v2panom

Original tag: v2panom

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: Which of the following options best describes the process by which the party decides on candidates for the national legislative elections?
CLARIFICATION: If nomination procedures vary across constituencies consider the most common practice.
RESPONSES:
0: The party leader unilaterally decides on which candidates will run for the party in national legislative elections.
1: The national party leadership (i.e. an executive committee) collectively decides which candidates will run for the party in national legislative elections.
2: Delegates of local/regional organizations decide which candidates will run for the party in national legislative elections.
3: All party members decide on which candidates will run for the party in national legislative elections in primaries/caucuses.
4: All registered voters decide on which candidates will run for the party in national legislative elections in primaries/caucuses.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.5 Internal Cohesion (v2padisa)

Long tag: vdem_vparty_v2padisa

Original tag: v2padisa

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent do the elites in this party display disagreement over party strategies?
CLARIFICATION: Party strategies include election campaign strategy, policy stance, distribution of party financial resources, cooperation with other parties (i.e. coalition formation), and the selection of legislative and presidential candidates as well as the party leader. Party elites are prominent and influential party members such as current and former ministers, members of parliament or the party leadership, regional and municipal leaders, and opinion leaders. They do not necessarily have to be the part of the official party leadership.
RESPONSES:
0: Party elites display almost complete disagreement over party strategies and many party elites have left the party.

1: Party elites display a high level of visible disagreement over party strategies and some of them have left the party.
2: Party elites display some visible disagreement over party strategies, but none of them have left the party.
3: Party elites display negligible visible disagreement over party strategies.
4: Party elites display virtually no visible disagreement over party strategies.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.6 Personalization of Party (v2paind)

Long tag: vdem_vparty_v2paind

Original tag: v2paind

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_osp, *_ord, *_codelow, *_codehigh, *_sd, *_mean, *_nr
QUESTION: To what extent is this party a vehicle for the personal will and priorities of one individual leader?
RESPONSES:
0: The party is not focused on the personal will and priorities of one individual leader.
1: The party is occasionally focused on the personal will and priorities of one individual party leader.
2: The party is somewhat focused on the personal will and priorities of one individual party leader.
3: The party is mainly focused on the personal will and priorities of one individual party leader.
4: The party is solely focused on the personal will and priorities of one individual party leader.
DATA RELEASE: 10-12.
CROSS-CODER AGGREGATION: Bayesian item response theory measurement model (see *V–Dem Methodology*).
DATE SPECIFIC: Election-specific dates.

2.6.5.7 Party Resources (v2pafunds_nr)

Long tag: vdem_vparty_v2pafunds_nr

Original tag: v2pafunds_nr

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: What were the major sources of party funds for this election campaign?
CLARIFICATION: Choose up to three most important ones. If a main source of funding for this campaign
comes from the party's assets such as properties and stocks, please code where these assets originally came from.
RESPONSES:
0: Formal state subsidies for political parties. (0=No, 1=Yes) [v2pafunds_0]
1: Large-scale donations from individuals. (0=No, 1=Yes) [v2pafunds_1]
2: Large-scale donations from companies. (0=No, 1=Yes) [v2pafunds_2]
3: Large-scale donations from civil society organizations (including trade unions). (0=No, 1=Yes) [v2pafunds_3]
4: Membership fees and small-scale supporters' donations. (0=No, 1=Yes) [v2pafunds_4] 5:

Informal use of state resources as incumbent party. (0=No, 1=Yes) [v2pafunds_5]
6: Funds of the party leader. (0=No, 1=Yes) [v2pafunds_6]
7: Funds of candidates. (0=No, 1=Yes) [v2pafunds_7]
SOURCE(S): Quality of Government Standard Dataset (2019).
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates.

2.6.5.8 Party Support Group (v2pagroup_nr)

Long tag: vdem_vparty_v2pagroup_nr

Original tag: v2pagroup_nr

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: C
ADDITIONAL VERSIONS: *_nr
QUESTION: To which particular group in society does the core membership and supporters of this party belong?
CLARIFICATION: Choose only the key groups. Though you may choose up to three groups, if only one
group is most relevant, please only choose that group.
RESPONSES: 0: No specific, clearly identifiable group. (0=No, 1=Yes) [v2pagroup_0]
1: The aristocracy, including high status hereditary social groups and castes. (0=No, 1=Yes) [v2pagroup_1]
2: Agrarian elites, including rich peasants and large landholders. (0=No, 1=Yes) [v2pagroup_- 2]
3: Business elites. (0=No, 1=Yes) [v2pagroup_3]
4: The military. (0=No, 1=Yes) [v2pagroup_4]
5: An ethnic or racial group(s). (0=No, 1=Yes) [v2pagroup_5]
6: A religious group(s). (0=No, 1=Yes) [v2pagroup_6]
7: Local elites, including customary chiefs. (0=No, 1=Yes) [v2pagroup_7]
8: Urban working classes, including labor unions. (0=No, 1=Yes) [v2pagroup_8]
9: Urban middle classes. (0=No, 1=Yes) [v2pagroup_9]
10: Rural working classes (e.g., peasants). (0=No, 1=Yes) [v2pagroup_10]
11: Rural middle classes (e.g., family farmers). (0=No, 1=Yes) [v2pagroup_11]
12: Regional groups or separatists. (0=No, 1=Yes) [v2pagroup_12]
13: Women. (0=No, 1=Yes) [v2pagroup_13]
14: Other specific groups. (0=No, 1=Yes) [v2pagroup_14]
DATA RELEASE: 1-2.
CROSS-CODER AGGREGATION: Mean
DATE SPECIFIC: Election-specific dates.

2.6.6 Populism

This section lists variables measuring populist features of parties.

2.6.6.1 Salience of anti–establishment rhetoric (E) (ep_antielite_salience)

Long tag: vdem_vparty_ep_antielite_salience

Original tag: ep_antielite_salience

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the salience of anti–establishment and anti–elite rhetoric?
RESPONSES:

Numeric
SCALE: Interval, from "Not important at all" to "Extremely important" (0–10)
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.6.2 Salience of reducing political corruption (E) (ep_corrupt_salience)

Long tag: vdem_vparty_ep_corrupt_salience

Original tag: ep_corrupt_salience

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the salience of reducing political corruption?
RESPONSES:
Numeric
SCALE: Interval, from "Not important at all" to "Extremely important" (0–10)
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.6.3 Members vs. leadership party policy choices (E) (ep_members_vs_leadership)

Long tag: vdem_vparty_ep_members_vs_leadership

Original tag: ep_members_vs_leadership

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the position on whether members/activists or leadership has control over party policy choices?
RESPONSES:
Numeric
SCALE: Interval, from "Members/activists have complete control over party policy choices" to "Leadership had complete control over party policy choices" (0–10).
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.6.4 Position on direct vs. representative democracy (E) (ep_people_vs_elite)

Long tag: vdem_vparty_ep_people_vs_elite

Original tag: ep_people_vs_elite

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the position on direct vs. representative democracy?
CLARIFICATION: Some political parties take the position that "the people" should have the final say on the most important issues, for example, by voting directly in referendums. At the opposite pole are political parties that believe that elected representatives should make the most important political decisions.

RESPONSES:
Numeric
SCALE: Interval, from "Elected office holders should make the most important decisions" to "lt;lt;The peoplegt;gt;, not politicians, should make the most important decisions" (0–10).
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
NOTES: In CHES 2019 survey words "direct" and "representative democracy" are changed to "people" and "elected representatives" accordingly. For this codebook, the entry in CHES 2017 survey was used.
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.6.5 Populism type (E) (ep_type_populism)

Long tag: vdem_vparty_ep_type_populism

Original tag: ep_type_populism

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: The Party Populism typology categorizes whether parties favor the use of pluralism or populist rhetoric categorized into four groups (V8_Ord).
RESPONSES:
1: Strongly Pluralist.
2: Moderately Pluralist.
3: Moderately Populist.
4: Strongly Populist.
SCALE: Ordinal.
SOURCE(S): Norris (2020)
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.6.6 Populist values type (E) (ep_type_populist_values)

Long tag: vdem_vparty_ep_type_populist_values

Original tag: ep_type_populist_values

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: The Populist Values typology combines the categories of rhetoric (V8_Bin) and the social values (B6_Bin) for each party.
RESPONSES:
1: Pluralist–Liberal.
2: Pluralist–Conservative.
3: Populist–Liberal.
4: Populist–Conservative.
SCALE: Ordinal.
SOURCE(S): Norris (2020)
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.6.7 Populist rhetoric (E) (ep_v8_popul_rhetoric)

Long tag: vdem_vparty_ep_v8_popul_rhetoric

Original tag: ep_v8_popul_rhetoric

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: Where would you place each party on the following scale?
CLARIFICATION: Parties can also be classified by their current use of *populist* or *pluralist* rhetoric. *Populist* language typically challenges the legitimacy of established political institutions and emphasizes that the will of the people should prevail. By contrast, *pluralist* rhetoric rejects these ideas, believing that elected leaders should govern, constrained by minority rights, bargaining and compromise, as well as checks and balances on executive power.
RESPONSES:
Numeric
SCALE: Interval, from "Strongly favors pluralist rhetoric" to "Strongly favors populist rhetoric" (0–10).
SOURCE(S): Norris (2020)
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.6.8 Populist saliency (E) (ep_v9_popul_saliency)

Long tag: vdem_vparty_ep_v9_popul_saliency

Original tag: ep_v9_popul_saliency

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: And how *important* is populist rhetoric currently for each of the following parties? Where would you place each party on the following scale?
RESPONSES:
Numeric
SCALE: Interval, from "No importance" to "Great importance" (0–10).
SOURCE(S): Norris (2020)
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.7 Liberal-Traditional Scaling

This section measures weather parties lean towards liberal values or traditional values.

2.6.7.1 Position on democratic freedoms and rights (E) (ep_galtan)

Long tag: vdem_vparty_ep_galtan

Original tag: ep_galtan

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the position of the party in a particular year in terms of their views on democratic freedoms and rights?
CLARIFICATION: "Libertarian" or "postmaterialist" parties favor expanded personal freedoms, for example, access to abortion, active euthanasia, same-sex marriage, or greater democratic participation. "Traditional" or "authoritarian" parties often reject these ideas; they value order, tradition, and stability, and believe that the government should be a firm moral authority on social and cultural issues.

RESPONSES:
Numeric
SCALE: Interval, from "Libertarian/Postmaterialist" to "Traditional/Authoritarian" (0–10).
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
NOTES: In CHES 2019 survey words "democratic freedoms" and "rights" in the wording of the question are changed to "social" and "cultural values" accordingly. The formulation of the clarification section is also nonsignificantly different in comparison with CHES 1999-2017, which is used in this codebook.
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.7.2 Salience of libertarian or traditional issues (E) (ep_galtan_salience)

Long tag: vdem_vparty_ep_galtan_salience

Original tag: ep_galtan_salience

Dataset citation: Lindberg et al. (2022)

Variable citation: Bakker et al. (2020), Polk et al. (2017)

Description:

VARIABLE TYPE: E
QUESTION: What is the relative salience of libertarian/traditional issues in the party's public stance in a particular year?
RESPONSES:
Numeric
SCALE: Interval, from "No importance" to "Great importance" (0–10).
SOURCE(S): Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)
DATA RELEASE: 10-12.
CITATION: Bakker *et al.* (2015), Polk *et al.* (2017), Bakker *et al.* (2020)

2.6.7.3 Social Liberalism-Conservatism (E) (ep_v6_lib_cons)

Long tag: vdem_vparty_ep_v6_lib_cons

Original tag: ep_v6_lib_cons

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: Where would you place each party on the following scale?
CLARIFICATION: Parties can also be classified by their current social values. Those with *liberal* values favor expanded personal freedoms, for example, on abortion rights, same–sex marriage, and democratic participation. Those with *conservative* values reject these ideas in favor of order, tradition and stability, believing that government should be a firm moral authority on social and cultural issues.
RESPONSES:
Numeric
SCALE: Interval, from "Very liberal" to "Very conservative" (0–10).
SOURCE(S): Norris (2020)
NOTES: Only original score is included.
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.7.4 Social values saliency (E) (ep_v7_lib_cons_saliency)

Long tag: vdem_vparty_ep_v7_lib_cons_saliency

Original tag: ep_v7_lib_cons_saliency

Dataset citation: Lindberg et al. (2022)

Variable citation: Norris (2020)

Description:

VARIABLE TYPE: E
QUESTION: And how *important* are liberal/conservative social values for each of the following parties? Where would you place each party on the following scale?
RESPONSES:
Numeric
SCALE: Interval, from "No importance" to "Great importance" (0–10).
SOURCE(S): Norris (2020)
DATA RELEASE: 10-12.
CITATION: Norris (2020)

2.6.8 Party Systems

This section lists variables related to party systems' identities.

2.6.8.1 Party-System Democracy Index (v2xpas_democracy)

Long tag: vdem_vparty_v2xpas_democracy

Original tag: v2xpas_democracy

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent does the party system show commitment to democratic norms prior to elections?
CLARIFICATION: The Party-System Democracy Index (PSDI) ranges from 0 to 1, where lower values are associated with more authoritarian party systems and higher values with more democratic party systems. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, 0-1 low to high
SOURCE(S): Angiolillo, Wiebrecht, and Lindberg (2023)
NOTES: the PSDI is calculated by using two V-Party variables: the anti-pluralist index for each political party in the party system (v2xpa_antiplural) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3). We replace any missing values for a non-existent opposition with a value equal to 0 if the regime scores lower than 0.5 in the electoral democracy index (v2x_polyarchy). This approach assigns a 0 to the opposition only if the opposition has a missing value and, therefore, does not apply to hegemonic or competitive authoritarian regimes that allow opposition parties. The threshold on the democracy score is important since in some cases formation of the executive is delayed, or parties are not able to reach a governmental coalition also resulting in missing values for the opposition. Codelow and codehigh are calculated through the same procedure, yet using anti-pluralist index codelow (v2xpa_antiplural_codelow) and codehigh (v2xpa_antiplural_codehigh) and EDI codelow (v2x_polyarchy_codelow) and codehigh (v2x_polyarchy_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo, Wiebrecht, and Lindberg (2023)

AGGREGATION: the PSDI is calculated using the following equation:

$$\text{PSDI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{opt}} * ws_{\text{opt}})] \quad (1)$$

, PSDI uses two V-Party variables: the anti-pluralist index for each political party in the party system (v2xpa_antiplural) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3). We replace any missing values for a non-existent opposition with a value equal to 0 if the regime scores lower than 0.5 in the electoral democracy index (v2x_polyarchy). This approach assigns a 0 to the opposition only if the opposition has a missing value and, therefore, does not apply to hegemonic or competitive authoritarian regimes that allow opposition parties. The threshold on the democracy score is important since in some cases formation of the executive is delayed, or parties are not able to reach a governmental coalition also resulting in missing values for the opposition.
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.2 Government Coalition Democracy Index (v2xpas_democracy_government)

Long tag: vdem_vparty_v2xpas_democracy_government

Original tag: v2xpas_democracy_government

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do the parties in the government show commitment to democratic norms prior to elections?
CLARIFICATION: The Government Coalition Democracy Index (GCDI) ranges from 0 to 1, where lower values are associated with more authoritarian governmental coalition and higher values with more democratic governmental coalition. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, 0-1 high to low
SOURCE(S): Angiolillo, Wiebrecht, and Lindberg (2023)
NOTES: the GCDI is a subgroup of the PSDI variable and it only captures the democratic levels for parties in the governmental coalition. Codelow and codehigh are calculated through the same procedure, yet using anti-pluralist index codelow (v2xpa_antiplural_codelow) and codehigh (v2xpa_antiplural_codehigh) and EDI codelow (v2x_polyarchy_codelow) and codehigh (v2x_polyarchy_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo, Wiebrecht, and Lindberg (2023)
AGGREGATION: the GCDI is calculated using the following equation:

$$\text{PSDI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{opt}} * ws_{\text{opt}})] \quad (2)$$

, and using only the group 'gpt' (government parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.3 Opposition Parties' Democracy Index (v2xpas_democracy_opposition)

Long tag: vdem_vparty_v2xpas_democracy_opposition

Original tag: v2xpas_democracy_opposition

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do the parties in the opposition show commitment to democratic norms prior to elections?
CLARIFICATION: The Opposition Parties' Democracy Index (OPDI) ranges from 0 to 1, where lower values are associated with more authoritarian opposition parties and higher values with more democratic opposition parties. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, 0-1 high to low
SOURCE(S): Angiolillo, Wiebrecht, and Lindberg (2023)
NOTES: the OPDI is a subgroup of the PSDI variable and it only captures the democratic levels for parties in the opposition. Codelow and codehigh are calculated through the same procedure, yet using anti-pluralist index codelow (v2xpa_antiplural_codelow) and codehigh (v2xpa_antiplural_codehigh) and EDI codelow (v2x_polyarchy_codelow) and codehigh (v2x_polyarchy_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo, Wiebrecht, and Lindberg (2023)
AGGREGATION: the OPDI is calculated using the following equation:

$$\text{PSDI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2pa_antipluralist}_{\text{opt}} * ws_{\text{opt}})] \quad (3)$$

, and using only the group 'opt' (opposition parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.4 Party-System Religion Index (v2xpas_religion)

Long tag: vdem_vparty_v2xpas_religion

Original tag: v2xpas_religion

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do political parties in the party system invoke God, religion, or sacred/religious texts to justify their policy positions?
CLARIFICATION: The Party-System Religion Index (PSDI) ranges from 0 to 1, where lower values are associated with less religious party systems and higher values with more religious

party systems. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, 0-1 low to high
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the PSREI is calculated by using two V-Party indicators: the religious principle indicator for each political party in the party system (v2parelig) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3). Codelow and codehigh are calculated through the same procedure, yet using religious principle codelow (v2parelig_codelow) and codehigh (v2parelig_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)
AGGREGATION: the PSREI is calculated using the following equation:

$$\text{PSREI}_{\text{PS}} = 1 - [\sum_{p=1}^{N}(\text{v2parelig}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2parelig}_{\text{opt}} * ws_{\text{opt}})] \quad (4)$$

, PSREI uses two V-Party variables: the religious principle indicator for each political party in the party system (v2parelig) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.5 Government Coalition Religion Index (v2xpas_religion_government)

Long tag: vdem_vparty_v2xpas_religion_government

Original tag: v2xpas_religion_government

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do political parties in the governing coalition invoke God, religion, or sacred/religious texts to justify their policy positions?
CLARIFICATION: The Government Coalition Religion Index (GCREI) ranges from 0 to 1, where lower values are associated with less religious governmental coalition and higher values with more religious governmental coalition. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES:
Scale, -4 to 4 (high to low)
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the GCREI is a subgroup of the PSREI variable and it only captures the religious levels for parties in the governmental coalition. Codelow and codehigh are calculated through the same procedure, yet using religious principle codelow (v2parelig_codelow) and codehigh (v2parelig_codehigh), respectively.
AGGREGATION: The GCREI is calculated using the following equation:

$$\text{PSREI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{v2parelig}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2parelig}_{\text{opt}} * ws_{\text{opt}})] \quad (5)$$

, and using only the group quot;gptquot; (government parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATA RELEASE: Demscore v2
DATE SPECIFIC: Election-specific dates.

2.6.8.6 Opposition Parties' Religion Index (v2xpas_religion_opposition)

Long tag: vdem_vparty_v2xpas_religion_opposition

Original tag: v2xpas_religion_opposition

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do political parties in the opposition invoke God, religion, or sacred/religious texts to justify their policy positions?
CLARIFICATION: The Opposition Parties' Religion Index (OPREI) ranges from 0 to 1, where lower values are associated with less religious opposition parties and higher values with more religious opposition parties. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, -4 to 4 (high to low)
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the OPREI is a subgroup of the PSREI variable and it only captures the religious levels for parties in the opposition. Codelow and codehigh are calculated through the same procedure, yet using religious principle indicator codelow (v2parelig_codelow) and codehigh (v2parelig_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)
AGGREGATION: the OPREI is calculated using the following equation:

$$\text{PSREI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{v2parelig}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2parelig}_{\text{opt}} * ws_{\text{opt}})] \quad (6)$$

, and using only the group 'opt' (opposition parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.7 Party-System Exclusion Index (v2xpas_exclusion)

Long tag: vdem_vparty_v2xpas_exclusion

Original tag: v2xpas_exclusion

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent does the party system reject cultural superiority and support immigration policies and the equal participation of women in the labor market?
CLARIFICATION: The Party-System Exclusion Index (PSEXI) ranges from 0 to 1, where lower values are associated with more inclusive party systems and higher values with more exclusive party systems. As this index is calculated for country-election-year, we reccomend

caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, 0-1 low to high
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the PSEXI is calculated by first creating a measure of political parties' exclusion preferences using the following equation:

$$\text{party_exclusion_index}_{\text{PS}} = 2 * (v2paculsup) + 0.5 * (v2paimmig + v2pawomlab) \quad (7)$$

Then, the PSEXI is computed by using another V-Party indicator on political parties' seat shares (v2paseatshare), which function is to weight the index. We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3). Codelow and codehigh are calculated through the same procedure, yet using religious principle codelow (party_exclusion_index_codelow) and codehigh (party_exclusion_index_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)
AGGREGATION: The PSEXI is calculated using the following equation:

$$\text{PSLRI}_{\text{PS}} = 1 - [\sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{opt}} * ws_{\text{opt}})] \quad (8)$$

, the PSEXI is calculated by first creating a measure of political parties' exclusion preferences using the following equation:

$$\text{party_exclusion_index}_{\text{PS}} = 2 * (v2paculsup) + 0.5 * (v2paimmig + v2pawomlab) \quad (9)$$

Then, the PSEXI is computed by using another V-Party indicator on political parties' seat shares (v2paseatshare), which function is to weight the index. We also divide between parties in the government (v2pagovsup = 0, 1, or 2) or in the opposition (v2pagovsup = 3).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.8 Government Coalition Exclusion Index (v2xpas_exclusion_government)

Long tag: vdem_vparty_v2xpas_exclusion_government

Original tag: v2xpas_exclusion_government

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do parties in the governing coalition reject cultural superiority and support immigration policies and the equal participation of women in the labor market?
CLARIFICATION: The Government Coalition Exclusion Index (GCEXI) ranges from 0 to 1, where lower values are associated with government coalitions' more inclusive stances and higher values with government coalitions' more exclusive stances. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, -10 to 10 (high to low)
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the GCEXI is a subgroup of the PSEXI variable and it only captures the aggregated positions on exclusion for parties in the government. Codelow and codehigh are calculated through the same procedure, yet using party exclusion index codelow (party_exclusion_index_codelow) and codehigh (party_exclusion_index_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)

AGGREGATION: the GCEXI is calculated using the following equation:

$$\text{PSEXI}_{\text{PS}} = (\sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{opt}} * ws_{\text{opt}}) \tag{10}$$

, and using only the group quot;gptquot; (government parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.9 Opposition Parties' Exclusion Index (v2xpas_exclusion_opposition)

Long tag: vdem_vparty_v2xpas_exclusion_opposition

Original tag: v2xpas_exclusion_opposition

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: To what extent do opposition parties reject cultural superiority and support immigration policies and the equal participation of women in the labor market?
CLARIFICATION: The Opposition Parties' Exclusion Index (OPEXI) ranges from 0 to 1, where lower values are associated with more inclusive opposition parties and higher values with opposition parties advocating for more exclusion. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, -10 to 10 (high to low)
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the OPEXI is a subgroup of the PSEXI variable and it only captures the aggregated exclusion positions for parties in the opposition. Codelow and codehigh are calculated through the same procedure, yet using the party exclusion index codelow (party_exclusion_index_codelow) and codehigh (party_exclusion_index_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)
AGGREGATION: the OPREI is calculated using the following equation:

$$\text{PSEXI}_{\text{PS}} = 1 - [(\sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{party_exclusion_index}_{\text{opt}} * ws_{\text{opt}})] \tag{11}$$

, and using only the group quot;optquot; (opposition parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.10 Party-System Left-Right Index (v2xpas_economic)

Long tag: vdem_vparty_v2xpas_economic

Original tag: v2xpas_economic

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D

PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: Where are parties in the party system located on their overall ideological stance on economic issues?
CLARIFICATION: The Party-System Left-Right Index (PSLRI) ranges from 0 to 1, where lower values are associated with more left-leaning party systems and higher values with more right-leaning party systems. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES:
Scale, 0-1 low to high
SOURCE(S): Angiolillo and Wiebrecht (2023)

NOTES: the PSLRI is calculated by using two V-Party indicators: the economic left-right scale indicator for each political party in the party system (v2pariglef) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3). Codelow and codehigh are calculated through the same procedure, yet using religious principle codelow (v2pariglef_codelow) and codehigh (v2pariglef_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)
AGGREGATION: the PSREI is calculated using the following equation:

$$\text{PSLRI}_{\text{PS}} = \sum_{p=1}^{N}(\text{v2pariglef}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2pariglef}_{\text{opt}} * ws_{\text{opt}}) \tag{12}$$

, PSLRI uses two V-Party variables: the economic left-right scale indicator for each political party in the party system (v2pariglef) and weighting political parties by their seat shares (v2paseatshare). We also divide between parties in the government (v2pagovsup = 0,1, or 2) or in the opposition (v2pagovsup = 3).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.11 Government Coalition Left-Right Index (v2xpas_economic_government)

Long tag: vdem_vparty_v2xpas_economic_government

Original tag: v2xpas_economic_government

Dataset citation: Lindberg et al. (2022)

Description:

VARIABLE TYPE: D
PROJECT MANAGER(S): Fabio Angiolillo
QUESTION: Where are parties in the governing coalition located on their overall ideological stance on economic issues?
CLARIFICATION: The Government Coalition Left-Right Index (GCLRI) ranges from 0 to 1, where lower values are associated with more left-leaning government coalitions and higher values with more right-leaning government coalitions. As this index is calculated for country-election-year, we reccomend caution in using it for years where the country does not have a general elction (lower house).
RESPONSES: Scale, -4 to 4 (far-left to far-right)
SOURCE(S): Angiolillo and Wiebrecht (2023)
NOTES: the GCLRI is a subgroup of the PSLRI variable and it only captures the aggregated economic position levels for parties in the government. Codelow and codehigh are calculated through the same procedure, yet using economic left-right scale indicator codelow (v2pariglef_codelow) and codehigh (v2pariglef_codehigh), respectively.
DATA RELEASE: Demscore v2
CITATION: Angiolillo and Wiebrecht (2023)

AGGREGATION: the GCLRI is calculated using the following equation:

$$\text{PSLRI}_{\text{PS}} = (\sum_{p=1}^{N}(\text{v2pariglef}_{\text{gpt}} * ws_{\text{gpt}}) + \sum_{p=1}^{N}(\text{v2pariglef}_{\text{opt}} * ws_{\text{opt}}) \quad (13)$$

, and using only the group 'gpt' (government parties).
YEARS: 1970-2019
ADDITIONAL VERSIONS: *_codelow, *_codehigh
DATE SPECIFIC: Election-specific dates.

2.6.8.12 Opposition Parties' Left-Right Index (v2xpas_economic_opposition)
